Designates the certificate as a CA or intermediate certificate. If omitted, the operation creates a normal certificate.

certificate_name

The name of the certificate.

AS *cert*

The imported certificate (string).

This parameter should include the entire chain of certificates, excluding the CA certificate.

KEY ***key_name***

The name of the key.

This parameter only needs to be set for client/server certificates and CA certificates that you intend to sign other certificates with in Vertica. If your imported CA certificate will only be used for validating other certificates, you do not need to specify a key.

SUBJECT ***subject***

The entity to issue the certificate to (string).

SIGNED BY ***ca_cert***

The name of the CA that signed the certificate.

When adding a CA certificate, this parameter is optional. Specifying it will create an intermediate CA that cannot be used to sign other CA certificates.
When creating a certificate, this parameter is required.

VALID FOR ***days***

The number of days that the certificate is valid.

EXTENSIONS ***ext*** **=** ***val***

Strings specifying certificate extensions. For a full list of extensions, see the OpenSSL documentation .

KEY ***private_key***

The name of the certificate's private key.

When importing a certificate, this parameter is required.

Privileges

Superuser

Default extensions

CREATE CERTIFICATE generates x509v3 certificates and includes several extensions by default. These differ based on the type of certificate you create:

CA Certificate:

- 'basicConstraints' = 'critical, CA:true'
- 'keyUsage' = 'critical, digitalSignature, keyCertSign'
- 'nsComment' = Vertica generated [CA] certificate'
- 'subjectKeyIdentifier' = 'hash'

Certificate:

- 'basicConstraints' = 'CA:false'
- 'keyUsage' = 'critical, digitalSignature, keyEncipherment'

Examples

See Generating TLS certificates and keys .

- CREATE KEY

CREATE DIRECTED QUERY

Saves an association between an input query and a query that is annotated with optimizer hints.

Syntax

Optimizer-generated

```
CREATE DIRECTED QUERY OPT[IMIZER] directedqueryID [COMMENT 'comments'] input-query
```

User-defined (custom)

```
CREATE DIRECTED QUERY CUSTOM directedqueryID [COMMENT 'comments'] annotated-query
```

Parameters

OPT[IMIZER]

Directs the query optimizer to generate an annotated query from *input-query* , and associate both in the new directed query.

CUSTOM

Specifies to associate *annotated-query* with the query previously specified by SAVE QUERY .

directedqueryID

A unique identifier for the directed query, a string that conforms to conventions described in Identifiers .

COMMENT ' *comments* '

Comments about the directed query, up to 128 characters. Comments can be useful for future reference—for example, explain why a given directed query was created.

If you omit this argument, Vertica inserts one of the following comments:

- Optimizer-generated directed query
- Custom directed query

input-query

The input query to associate with an optimizer-generated directed query. The input query supports only one optimizer hint, :v (alias IGNORECONST).

annotated-query

A query with embedded optimizer hints to associate with the input query most recently saved with SAVE QUERY .

Privileges

Superuser

Description

CREATE DIRECTED QUERY associates an input query with a query annotated with optimizer hints. It stores the association under a unique identifier. CREATE DIRECTED QUERY has two variants:

- CREATE DIRECTED QUERY OPTIMIZER directs the query optimizer to generate annotated SQL from the specified input query. The annotated query contains hints that the optimizer can use to recreate its current query plan for that input query.
- CREATE DIRECTED QUERY CUSTOM specifies an annotated query supplied by the user. Vertica associates the annotated query with the input query specified by the last SAVE QUERY statement.

In both cases, Vertica associates the annotated query and input query, and registers their association in the system table DIRECTED_QUERIES under query_name .

Caution

Vertica associates a saved query and directed query without checking whether the two are compatible. Be careful to sequence SAVE QUERY and CREATE DIRECTED QUERY CUSTOM so the saved and directed queries are correctly matched.

See also

Creating directed queries

CREATE EXTERNAL TABLE AS COPY

CREATE EXTERNAL TABLE AS COPY creates a table definition for data external to your Vertica database. This statement is a combination of the CREATE TABLE and COPY statements, supporting a subset of each statement's parameters.

Canceling a CREATE EXTERNAL TABLE AS COPY statement can cause unpredictable results. If you need to make a change, allow the statement to complete, drop the table, and then retry.

You can use ALTER TABLE to change the data types of columns instead of dropping and recreating the table.

You can use CREATE EXTERNAL TABLE AS COPY with any types except types from the Place package.

Note

Vertica does not create superprojections for external tables, since external tables are not stored in the database.

Syntax

```
CREATE EXTERNAL TABLE [ IF NOT EXISTS ] [[database.]schema.]table-name
   ( column-definition[,...] )
[{INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES]
AS COPY
   [ ( { column-as-expression | column }
      [ DELIMITER [ AS ] 'char' ]
      [ ENCLOSED [ BY ] 'char' ]
      [ ENFORCELENGTH ]
      [ ESCAPE [ AS ] 'char' | NO ESCAPE ]
      [ FILLER datatype ]
      [ FORMAT 'format' ]
      [ NULL [ AS ] 'string' ]
      [ TRIM 'byte' ]
   [,...] ) ]
   [ COLUMN OPTION ( column
      [ DELIMITER [ AS ] 'char' ]
      [ ENCLOSED [ BY ] 'char' ]
      [ ENFORCELENGTH ]
      [ ESCAPE [ AS ] 'char' | NO ESCAPE ]
      [ FORMAT 'format' ]
      [ NULL [ AS ] 'string' ]
      [ TRIM 'byte' ]
   [,...] ) ]
FROM {
     'path-to-data' [ ON { nodename | (nodeset) | ANY NODE } ] [ input-format ] }[,...]
     | [ WITH ] SOURCE source( [arg=value[,...] ] )
}
     [ NATIVE
     | FIXEDWIDTH COLSIZES {( integer )[,...]}
     | NATIVE VARCHAR
     | ORC
     | PARQUET
     ]
  [ ABORT ON ERROR ]
  [ DELIMITER [ AS ] 'char' ]
  [ ENCLOSED BY 'char' [ AND 'char' ] ]
  [ ENFORCELENGTH ]
  [ ERROR TOLERANCE ]
  [ ESCAPE AS 'char' | NO ESCAPE ]
  [ EXCEPTIONS 'path' [ ON nodename ] [,...] ]
  [ [ WITH ] FILTER filter( [ arg=value[,...] ] ) ]
  [ NULL [ AS ] 'string' ]
  [ [ WITH ] PARSER parser([arg=value [,...] ]) ]
  [ RECORD TERMINATOR 'string' ]
  [ REJECTED DATA 'path' [ ON nodename ] [,...] ]
  [ REJECTMAX integer ]
  [ SKIP integer ]
  [ SKIP BYTES integer ]
  [ TRAILING NULLCOLS ]
  [ TRIM 'byte' ]
```

Parameters

For all supported parameters, see the CREATE TABLE and COPY statements. For information on using this statement with UDLs, see User-defined load (UDL).

For additional guidance on using COPY parameters, see Specifying where to load data from.

Privileges

Superuser, or non-superuser with the following privileges:

- READ privileges on the USER-accessible storage location, see GRANT (storage location)

- Full access (including SELECT) to an external table that the user has privileges to create

ORC and Parquet data

When using the ORC and Parquet formats, Vertica supports some additional options in the COPY statement and data structures for columns. See ORC (parser) and PARQUET (parser) .

If ORC or Parquet data is partitioned, Vertica expects Hive-style partitioning. If you see unexpected results when reading data, verify that globs in your file paths correctly align with the partition structure. See Troubleshooting external tables .

Examples

The following example defines an external table for delimited data stored in HDFS:

```
=> CREATE EXTERNAL TABLE sales (itemID INT, date DATE, price FLOAT)
   AS COPY FROM 'hdfs:///dat/ext1.csv' DELIMITER ',';
```

The following example uses data in the ORC format that is stored in S3. The data has two partition columns, represented as directories in the file structure. For more information about partitions, see Using partition columns .

```
=> CREATE EXTERNAL TABLE transactions (id int, name varchar(50), created date, region varchar(50))
  AS COPY FROM 's3://datalake/sales/*/*/*'
  ORC(hive_partition_cols='created,region');
```

The following example shows how you can read from all Parquet files in a local directory, with no partitions and no globs:

```
=> CREATE EXTERNAL TABLE sales (itemID INT, date DATE, price FLOAT)
   AS COPY FROM '/data/sales/*.parquet' PARQUET;
```

The following example creates an external table using partitioned data in the ORC format. The table includes four columns. Two columns, "id" and "name", are in the data files. The other two, "created" and "region", are partition columns. For more about partition columns, see Using partition columns .

```
=> CREATE EXTERNAL TABLE t (id int, name varchar(50), created date, region varchar(50))
  AS COPY FROM 'hdfs:///path/*/*/*'
  ORC(hive_partition_cols='created,region');
```

The following example creates an external table from data in Google Cloud Storage:

```
=> CREATE EXTERNAL TABLE sales (itemID INT, date DATE, price FLOAT)
   AS COPY FROM 'gs://data/sales/*.csv';
```

The following example creates an external table for data containing arrays:

```
=> CREATE EXTERNAL TABLE cust (cust_custkey int, cust_custname varchar(50), cust_custstaddress ARRAY[varchar(100)],
  cust_custaddressln2 ARRAY[varchar(100)], cust_custcity ARRAY[varchar(50)], cust_custstate ARRAY[char(2)], cust_custzip ARRAY[int],
  cust_email varchar(50), cust_phone varchar(30))
  AS COPY FROM '   ' PARQUET;
```

The following examples create external tables from data in the local file system:

```
=> CREATE EXTERNAL TABLE ext1 (x integer) AS COPY FROM '/tmp/ext1.dat' DELIMITER ',';
=> CREATE EXTERNAL TABLE ext2 (x integer) AS COPY FROM '/tmp/ext2.dat.bz2' BZIP DELIMITER ',';
=> CREATE EXTERNAL TABLE ext3 (x integer, y integer) AS COPY (x as '5', y) FROM '/tmp/ext3.dat.bz2' BZIP DELIMITER ',';
```

To allow users without superuser access to use external tables with data on the local file system, S3, or GCS, create a location for 'user' usage and grant access to it. This example shows granting access to a user named Bob to any external table whose data is located under /tmp (including in subdirectories to any depth):

```
=> CREATE LOCATION '/tmp' ALL NODES USAGE 'user';
=> GRANT ALL ON LOCATION '/tmp' to Bob;
```

The following example shows CREATE EXTERNAL TABLE using a user-defined source:

```
=> CREATE SOURCE curl AS LANGUAGE 'C++' NAME 'CurlSourceFactory' LIBRARY curllib;
=> CREATE EXTERNAL TABLE curl_table1 as COPY SOURCE CurlSourceFactory;
```

See also

Creating external tables

CREATE FAULT GROUP

Enterprise Mode only

Creates a fault group, which can contain the following:

- One or more nodes
- One or more child fault groups
- One or more nodes and one or more child fault groups

CREATE FAULT GROUP creates an empty fault group. Use ALTER FAULT GROUP to add nodes or other fault groups to an existing fault group.

Syntax

```
CREATE FAULT GROUP name
```

Parameters

name

The name of the fault group to create, unique among all fault groups, where *name* conforms to conventions described in Identifiers .

Privileges

Superuser

Examples

The following command creates a fault group called parent0 :

```
=> CREATE FAULT GROUP parent0;
CREATE FAULT GROUP
```

Use ALTER FAULT GROUP to add nodes or other fault groups to the parent0 fault group.

See also

- FAULT_GROUPS
- CLUSTER_LAYOUT
- Fault groups
- High availability with fault groups

CREATE FLEXIBLE EXTERNAL TABLE AS COPY

CREATE FLEXIBLE EXTERNAL TABLE AS COPY creates a flexible external table. This statement combines statements CREATE FLEXIBLE TABLE and COPY statements, supporting a subset of each statement's parameters.

You can also use user-defined load functions (UDLs) to create external flex tables. For details about creating and using flex tables, see Using Flex Tables.

> **Note**
> Vertica does not create a superprojection for an external table when you create it.

For details about creating and using flex tables, see Creating flex tables in Using Flex Tables.

> **Caution**
> Canceling a CREATE FLEX EXTERNAL TABLE AS COPY statement can cause unpredictable results. Vertica recommends that you allow the statement to finish, then use DROP TABLE after the table exists.

Syntax

```
CREATE FLEX[IBLE] EXTERNAL TABLE [ IF NOT EXISTS ] [[database.]schema.]table-name
  ( [ column-definition[,...] ] )
  [ INCLUDE | EXCLUDE [SCHEMA] PRIVILEGES ]
AS COPY [ ( { column-as-expression | column } [ FILLER datatype ] ]
  FROM {
    'path-to-data' [ ON nodename | ON ANY NODE | ON (nodeset) ] input-format [,...]
    | [ WITH ] UDL-clause[...]
  }
  [ ABORT ON ERROR ]
  [ DELIMITER [ AS ] 'char' ]
  [ ENCLOSED [ BY ] 'char' ]
  [ ENFORCELENGTH ]
  [ ESCAPE [ AS ] 'char' | NO ESCAPE ]
  [ EXCEPTIONS 'path' [ ON nodename ] [,...] ]
  [ NULL [ AS ] 'string' ]
  [ RECORD TERMINATOR 'string' ]
  [ REJECTED DATA 'path' [ ON nodename ][,...] ]
  [ REJECTMAX integer ]
  [ SKIP integer ]
  [ SKIP BYTES integer ]
  [ TRAILING NULLCOLS ]
  [ TRIM 'byte' ]
```

Parameters

For parameter descriptions, see CREATE TABLE and Parameters .

> **Note**
> CREATE FLEXIBLE EXTERNAL TABLE AS COPY supports only a subset of CREATE TABLE and COPY parameters.

Privileges

Superuser, or non-superuser with the following privileges:

- READ privileges on the USER-accessible storage location, see GRANT (storage location)
- Full access (including SELECT) to an external table that the user has privileges to create

Examples

To create an external flex table:

```
=> CREATE flex external table mountains() AS COPY FROM 'home/release/KData/kmm_ountains.json' PARSER fjsonparser();
CREATE TABLE
```

As with other flex tables, creating an external flex table produces two regular tables: the named table and its associated _keys table. The keys table is not an external table:

```
=> \dt mountains
                List of tables
 Schema |   Name    | Kind  |  Owner  | Comment
--------+-----------+-------+---------+---------
 public | mountains | table | release |
(1 row)
```

You can use the helper function, COMPUTE_FLEXTABLE_KEYS_AND_BUILD_VIEW , to compute keys and create a view for the external table:

```
=> SELECT compute_flextable_keys_and_build_view ('appLog');

                    compute_flextable_keys_and_build_view
-------------------------------------------------------------------------------------------------
Please see public.appLog_keys for updated keys
The view public.appLog_view is ready for querying
(1 row)
```

Check the keys from the _keys table for the results of running the helper application:

```
=> SELECT * FROM appLog_keys;
                        key_name                        | frequency |   data_type_guess
--------------------------------------------------------+-----------+-----------------
contributors                                            |         8 | varchar(20)
coordinates                                             |         8 | varchar(20)
created_at                                              |         8 | varchar(60)
entities.hashtags                                       |         8 | long varbinary(186)
.
.
.
retweeted_status.user.time_zone                         |         1 | varchar(20)
retweeted_status.user.url                               |         1 | varchar(68)
retweeted_status.user.utc_offset                        |         1 | varchar(20)
retweeted_status.user.verified                          |         1 | varchar(20)
(125 rows)
```

You can query the view:

```
=> SELECT "user.lang" FROM appLog_view;
 user.lang
-----------
it
en
es
en
en
es
tr
en
(12 rows)
```

See also

- CREATE EXTERNAL TABLE AS COPY

CREATE FLEXIBLE TABLE

Creates a flexible (flex) table in the logical schema.

When you create a flex table, Vertica automatically creates two dependent objects:

- Keys table that is named *flex-table-name* _keys
- View that is named *flex-table-name* _view

The flex table requires the keys table and view. Neither of these objects can exist independently of the flex table.

Syntax

Create with column definitions

```
CREATE [[ scope ] TEMP[ORARY]] FLEX[IBLE] TABLE [ IF NOT EXISTS ] [[database.]schema.]table-name
   ( [ column-definition[,...] [, table-constraint ][,...] ] )
   [ ORDER BY column[,...] ]
   [ segmentation-spec ]
   [ KSAFE [k-num] ]
   [ partition-clause]
   [ {INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES ]
```

Create from another table

```
CREATE FLEX[IBLE] TABLE [[database.]schema.] table-name
 [ ( column-name-list ) ]
 [ {INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES ]
AS  query [ ENCODED BY column-ref-list ]
```

Parameters

For general parameter descriptions, see CREATE TABLE ; for parameters specific to temporary flex tables, see CREATE TEMPORARY TABLE and Creating flex tables .

You cannot partition a flex table on any virtual column (key).

Privileges

Non-superuser: CREATE privilege on table schema

Default columns

The CREATE statement can omit specifying any column definitions. CREATE FLEXIBLE TABLE always creates two columns automatically:

__raw__
: LONG VARBINARY type column to store unstructured data that you load. By default, this column has a NOT NULL constraint.

__identity__
: IDENTITY column that is used for segmentation and sorting when no other column is defined.

Default projections

Vertica automatically creates superprojections for both the flex table and keys tables when you create them.

If you create a flex table with one or more of the ORDER BY, ENCODED BY, SEGMENTED BY, or KSAFE clauses, the clause information is used to create projections. If no clauses are in use, Vertica uses the following defaults:

Table	Sort order	Encoding	Segmentation	K-safety
Flexible table	ORDER BY *.__identity__	none	SEGMENTED BY hash *.__identity__ ALL NODES OFFSET 0	1
Keys table	ORDER BY *._keys_frequency	none	UNSEGMENTED ALL NODES	1

> **Note**
> When you build a view for a flex table (see BUILD_FLEXTABLE_VIEW), the view is ordered by frequency , desc , and key_name .

Examples

The following example creates a flex table named darkdata without specifying any column information. Vertica creates a default superprojection and buddy projection as part of creating the table:

```
=> CREATE FLEXIBLE TABLE darkdata();
CREATE TABLE
=> \dj darkdata1*
                    List of projections
 Schema |        Name         |  Owner  |       Node       | Comment
--------+---------------------+---------+------------------+---------
 public | darkdata1_b0        | dbadmin |                  |
 public | darkdata1_b1        | dbadmin |                  |
 public | darkdata1_keys_super | dbadmin | v_vmart_node0001 |
 public | darkdata1_keys_super | dbadmin | v_vmart_node0002 |
 public | darkdata1_keys_super | dbadmin | v_vmart_node0003 |
(5 rows)

=> SELECT export_objects('','darkdata1_b0');
CREATE PROJECTION public.darkdata1_b0 /*+basename(darkdata1),createtype(P)*/
(
 __identity__,
 __raw__
)
AS
 SELECT darkdata1.__identity__,
        darkdata1.__raw__
 FROM public.darkdata1
 ORDER BY darkdata1.__identity__
SEGMENTED BY hash(darkdata1.__identity__) ALL NODES OFFSET 0;

SELECT MARK_DESIGN_KSAFE(1);
(1 row)

=> select export_objects('','darkdata1_keys_super');
CREATE PROJECTION public.darkdata1_keys_super /*+basename(darkdata1_keys),createtype(P)*/
(
 key_name,
 frequency,
 data_type_guess
)
AS
 SELECT darkdata1_keys.key_name,
        darkdata1_keys.frequency,
        darkdata1_keys.data_type_guess
 FROM public.darkdata1_keys
 ORDER BY darkdata1_keys.frequency
UNSEGMENTED ALL NODES;

SELECT MARK_DESIGN_KSAFE(1);
(1 row)
```

The following example creates a table called darkdata1 with one column definition (date_col). The statement specifies the partition by clause to partition the data by year. Vertica creates a default superprojection and buddy projections as part of creating the table:

```
=> CREATE FLEX TABLE darkdata1 (date_col date NOT NULL) partition by
  extract('year' from date_col);
CREATE TABLE
```

See also

- Creating flex tables
- CREATE FLEXIBLE EXTERNAL TABLE AS COPY

CREATE FUNCTION statements

Vertica provides CREATE statements for each type of user-defined extension . Each CREATE statement adds a user-defined function to the Vertica catalog:

CREATE statement	Extension
CREATE FUNCTION (scalar)	User-defined scalar functions (UDSFs)
CREATE AGGREGATE FUNCTION	User-defined aggregate functions (UDAFs)
CREATE ANALYTIC FUNCTION	User-defined analytic functions (UDAnF)
CREATE TRANSFORM FUNCTION	User-defined transform functions (UDTFs)
CREATE statements for user-defined load :	
• CREATE SOURCE	Load source functions
• CREATE FILTER	Load filter functions
• CREATE PARSER	Load parser functions

Vertica also provides CREATE FUNCTION (SQL) , which stores SQL expressions as functions that you can invoke in a query.

In this section

- CREATE AGGREGATE FUNCTION
- CREATE ANALYTIC FUNCTION
- CREATE FILTER
- CREATE FUNCTION (scalar)
- CREATE FUNCTION (SQL)
- CREATE PARSER
- CREATE SOURCE
- CREATE TRANSFORM FUNCTION

CREATE AGGREGATE FUNCTION

Adds a user-defined aggregate function (UDAF) to the catalog. The library containing the function must have been previously added using CREATE LIBRARY .

CREATE AGGREGATE FUNCTION automatically determines the function parameters and return value from data supplied by the factory class. Vertica supports overloading aggregate functions. When you call the SQL function, Vertica passes the input table to the function to process.

User-defined aggregate functions run in unfenced mode only.

Syntax

```
CREATE [ OR REPLACE ] AGGREGATE FUNCTION [ IF NOT EXISTS ]
 [[database.]schema.]function AS
 [ LANGUAGE 'language' ]
 NAME 'factory'
 LIBRARY library
 [ NOT FENCED ];
```

Arguments

OR REPLACE

If a function with the same name and arguments exists, replace it. You can use this to change between fenced and unfenced modes, for example. If you do not use this directive and the function already exists, the CREATE statement returns with a rollback error.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

IF NOT EXISTS

If a function with the same name and arguments exists, return without creating the function.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** function ***

Name of the function to create. This is the name used in SQL invocations of the function. It does not need to match the name of the factory, but it is less confusing if they are the same or similar.
The function name must conform to the restrictions on Identifiers .

LANGUAGE ' *language* '

The language used to develop this function, currently C++ only (the default).

NAME ' *factory* '

Name of the factory class that generates the function instance.

LIBRARY *library*

Name of the shared library that contains the function. This library must have already been loaded by CREATE LIBRARY .

NOT FENCED

Indicates that the function runs in unfenced mode. Aggregate functions cannot be run in fenced mode.

Privileges

Non-superuser:

- CREATE privilege on the function's schema
- USAGE privilege on the function's library

Examples

The following example demonstrates loading a library named AggregateFunctions and then defining functions named ag_avg and ag_cat . The functions are mapped to the AverageFactory and ConcatenateFactory classes in the library:

```
=> CREATE LIBRARY AggregateFunctions AS '/opt/vertica/sdk/examples/build/AggregateFunctions.so';
CREATE LIBRARY
=> CREATE AGGREGATE FUNCTION ag_avg AS LANGUAGE 'C++' NAME 'AverageFactory'
   library AggregateFunctions;
CREATE AGGREGATE FUNCTION
=> CREATE AGGREGATE FUNCTION ag_cat AS LANGUAGE 'C++' NAME 'ConcatenateFactory'
   library AggregateFunctions;
CREATE AGGREGATE FUNCTION
=> \x
Expanded display is on.
select * from user_functions;
-[ RECORD 1 ]----------+-----------------------------------------------------------------
schema_name            | public
function_name          | ag_avg
procedure_type         | User Defined Aggregate
function_return_type   | Numeric
function_argument_type | Numeric
function_definition    | Class 'AverageFactory' in Library 'public.AggregateFunctions'
volatility             |
is_strict              | f
is_fenced              | f
comment                |
-[ RECORD 2 ]----------+-----------------------------------------------------------------
schema_name            | public
function_name          | ag_cat
procedure_type         | User Defined Aggregate
function_return_type   | Varchar
function_argument_type | Varchar
function_definition    | Class 'ConcatenateFactory' in Library 'public.AggregateFunctions'
volatility             |
is_strict              | f
is_fenced              | f
comment                |
```

See also

- DROP AGGREGATE FUNCTION
- USER_FUNCTIONS
- Developing user-defined extensions (UDxs)
- Aggregate functions (UDAFs)

CREATE ANALYTIC FUNCTION

Adds a user-defined analytic function (UDAnF) to the catalog. The library containing the function must have been previously added using CREATE LIBRARY .

CREATE ANALYTIC FUNCTION automatically determines the function parameters and return value from data supplied by the factory class. Vertica supports overloading analytic functions. When you call the SQL function, Vertica passes the input table to the function in the library to process.

Syntax

```
CREATE [ OR REPLACE ] ANALYTIC FUNCTION [ IF NOT EXISTS ]
   [[database.]schema.]function AS
   [ LANGUAGE 'language' ]
   NAME 'factory'
   LIBRARY library
   [ FENCED | NOT FENCED ]
```

Arguments

OR REPLACE

If a function with the same name and arguments exists, replace it. You can use this to change between fenced and unfenced modes, for example. If you do not use this directive and the function already exists, the CREATE statement returns with a rollback error.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

IF NOT EXISTS

If a function with the same name and arguments exists, return without creating the function.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** function ***

Name of the function to create. This is the name used in SQL invocations of the function. It does not need to match the name of the factory, but it is less confusing if they are the same or similar.
The function name must conform to the restrictions on Identifiers .

LANGUAGE ' *language* '

Language used to develop this function, one of the following:

- C++ (default)
- Java

NAME ' *factory* '

Name of the factory class that generates the function instance.

LIBRARY *library*

Name of the library that contains the function. This library must already be loaded by CREATE LIBRARY .

FENCED | NOT FENCED

Enables or disables fenced mode for this function.

Default: FENCED

Privileges

Non-superuser:

- CREATE privilege on the function's schema
- USAGE privilege on the function's library

Examples

This example creates an analytic function named an_rank based on the factory class named RankFactory in the AnalyticFunctions library:

```
=> CREATE ANALYTIC FUNCTION an_rank AS LANGUAGE 'C++'
  NAME 'RankFactory' LIBRARY AnalyticFunctions;
```

See also

Analytic functions (UDAnFs)
CREATE FILTER

Adds a user-defined load filter function to the catalog. The library containing the filter function must have been previously added using CREATE LIBRARY .

CREATE FILTER automatically determines the function parameters and return value from data supplied by the factory class. Vertica supports overloading load filter functions. When you call the SQL function, Vertica passes the input table to the function in the library to process.

Important
Installing an untrusted UDL function can compromise the security of the server. UDxs can contain arbitrary code. In particular, user-defined source functions can read data from any arbitrary location. It is up to the developer of the function to enforce proper security limitations. Superusers must not grant access to UDxs to untrusted users.

Syntax

```
CREATE [ OR REPLACE ] FILTER [ IF NOT EXISTS ]
  [[database.]schema.]function AS
  [ LANGUAGE 'language' ]
  NAME 'factory' LIBRARY library
  [ FENCED | NOT FENCED ]
```

Arguments

OR REPLACE

If a function with the same name and arguments exists, replace it. You can use this to change between fenced and unfenced modes, for example. If you do not use this directive and the function already exists, the CREATE statement returns with a rollback error.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

IF NOT EXISTS

If a function with the same name and arguments exists, return without creating the function.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** function ***

Name of the function to create. This is the name used in SQL invocations of the function. It does not need to match the name of the factory, but it is less confusing if they are the same or similar.
The function name must conform to the restrictions on Identifiers .

LANGUAGE ' *language* '

The language used to develop this function, one of the following:

- C++ (default)
- Java
- Python

NAME ' *factory* '

Name of the factory class that generates the function instance. This is the same name used by the RegisterFactory class.

LIBRARY *library*

Name of the C++ library shared object file, Python file, or Java Jar file. This library must already have been loaded by CREATE LIBRARY .

FENCED | NOT FENCED

Enables or disables fenced mode for this function.

Default: FENCED

Privileges

Superuser

Examples

The following example demonstrates loading a library named iConverterLib , then defining a filter function named Iconverter that is mapped to the iConverterFactory factory class in the library:

```
=> CREATE LIBRARY iConverterLib as '/opt/vertica/sdk/examples/build/IconverterLib.so';
CREATE LIBRARY
=> CREATE FILTER Iconverter AS LANGUAGE 'C++' NAME 'IconverterFactory' LIBRARY IconverterLib;
CREATE FILTER FUNCTION
=> \x
Expanded display is on.
=> SELECT * FROM user_functions;
-[ RECORD 1 ]----------+--------------------
schema_name            | public
function_name          | Iconverter
procedure_type         | User Defined Filter
function_return_type   |
function_argument_type |
function_definition    |
volatility             |
is_strict              | f
is_fenced              | f
comment                |
```

See also

- DROP FILTER
- USER_FUNCTIONS
- User-defined load (UDL)

CREATE FUNCTION (scalar)

Adds a user-defined scalar function (UDSF) to the catalog. The library containing the function must have been previously added using CREATE LIBRARY .

A UDSF takes in a single row of data and returns a single value. These functions can be used anywhere a native Vertica function or statement can be used, except CREATE TABLE with its PARTITION BY or any segmentation clause.

CREATE FUNCTION automatically determines the function parameters and return value from data supplied by the factory class. Vertica supports overloading UDxs. When you call the function, Vertica passes the parameters to the function in the library to process.

Syntax

```
CREATE [ OR REPLACE ] FUNCTION [ IF NOT EXISTS ]
  [[database.]schema.]function AS
  [ LANGUAGE 'language' ]
  NAME 'factory'
  LIBRARY library
  [ FENCED | NOT FENCED ]
```

Arguments

OR REPLACE

If a function with the same name and arguments exists, replace it. You can use this to change between fenced and unfenced modes, for example. If you do not use this directive and the function already exists, the CREATE statement returns with a rollback error.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

IF NOT EXISTS

If a function with the same name and arguments exists, return without creating the function.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** function ***

Name of the function to create. This is the name used in SQL invocations of the function. It does not need to match the name of the factory, but it is less confusing if they are the same or similar.
The function name must conform to the restrictions on Identifiers .

LANGUAGE ' *language* '

Language used to develop this function, one of the following:

- C++ (default)
- Python
- Java
- R

NAME ' *factory* '

Name of the factory class that generates the function instance.

LIBRARY *library*

Name of the C++ shared object file, Python file, Java Jar file, or R functions file. This library must already have been loaded by CREATE LIBRARY .

FENCED | NOT FENCED

Enables or disables fenced mode for this function. Functions written in Java and R always run in fenced mode.

Default: FENCED

Privileges

- CREATE privilege on the function's schema
- USAGE privilege on the function's library

Examples

The following example loads a library named ScalarFunctions and then defines a function named Add2ints that is mapped to the Add2intsInfo factory class in the library:

```
=> CREATE LIBRARY ScalarFunctions AS '/opt/vertica/sdk/examples/build/ScalarFunctions.so';
CREATE LIBRARY
=> CREATE FUNCTION Add2Ints AS LANGUAGE 'C++' NAME 'Add2IntsFactory' LIBRARY ScalarFunctions;
CREATE FUNCTION
=> \x
Expanded display is on.
=> SELECT * FROM USER_FUNCTIONS;

-[ RECORD 1 ]----------+-----------------------------------------------------
schema_name            | public
function_name          | Add2Ints
procedure_type         | User Defined Function
function_return_type   | Integer
function_argument_type | Integer, Integer
function_definition    | Class 'Add2IntsFactory' in Library 'public.ScalarFunctions'
volatility             | volatile
is_strict              | f
is_fenced              | t
comment                |

=> \x
Expanded display is off.
=> -- Try a simple call to the function
=> SELECT Add2Ints(23,19);
 Add2Ints
----------
       42
(1 row)
```

The following example uses a scalar function that returns a ROW:

```
=> CREATE FUNCTION div_with_rem AS LANGUAGE 'C++' NAME 'DivFactory' LIBRARY ScalarFunctions;

=> SELECT div_with_rem(18,5);
       div_with_rem
-------------------------------
 {"quotient":3,"remainder":3}
(1 row)
```

See also

Developing user-defined extensions (UDxs)

CREATE FUNCTION (SQL)

Stores SQL expressions as functions for use in queries. User-defined SQL functions are useful for executing complex queries and combining Vertica built-in functions. You simply call the function in a given query. If multiple SQL functions with the same name and argument types are in the search path, Vertica calls the first match that it finds.

SQL functions are flattened in all cases, including DDL.

Syntax

```
CREATE [ OR REPLACE ] FUNCTION [ IF NOT EXISTS ]
   [[database.]schema.]function( [ arg_list ] )
   RETURN return_type
   AS
   BEGIN
     RETURN expression;
   END;
```

Arguments

OR REPLACE

If a function of the same name and arguments exists, replace it. If you only change the function arguments, Vertica ignores this option and maintains both functions under the same name.

OR REPLACE and IF NOT EXISTS are mutually exclusive.

IF NOT EXISTS

If a function with the same name and arguments exists, return without creating the function.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** function ***

SQL function to create, where *function* conforms to conventions described in Identifiers .

*** arg_list ***

A comma-delimited list of argument names and their data types, specified in this format:

```
argname argtype[,...]
```

where:

- *argname* is the name of an argument passed to *function* .
- *argtype* is *argname* 's data type .

*** return_type ***

The data type that this function returns.

RETURN *expression*

The SQL function body, where *expression* can contain built-in functions, operators, and argument names specified in the CREATE FUNCTION statement.

A semicolon at the end of the expression is required.

> **Note**
> CREATE FUNCTION allows only one RETURN expression. Return expressions do not support the following:
>
> - FROM, WHERE, GROUP BY, ORDER BY, and LIMIT clauses
> - Aggregation, analytics, and meta-functions

Privileges

Non-superuser:

- CREATE privilege on the function's schema
- USAGE privilege on the function's library

Strictness and volatility

Vertica infers the strictness and volatility (stable , immutable , or volatile) of a SQL function from its definition. Vertica then determines the correctness of usage, such as where an immutable function is expected but a volatile function is provided.

SQL functions and views

You can create views on the queries that use SQL functions and then query the views. When you create a view, a SQL function replaces a call to the user-defined function with the function body in a view definition. Therefore, when the body of the user-defined function is replaced, the view should also be replaced.

Examples

See Creating user-defined SQL functions .

See also

- ALTER FUNCTION (scalar)
- DROP FUNCTION
- User-defined SQL functions

CREATE PARSER

Adds a user-defined load parser function to the catalog. The library containing the function must have been previously added using CREATE LIBRARY.

CREATE PARSER automatically determines the function parameters and return value from data supplied by the factory class. Vertica supports overloading load parser functions. When you call the SQL function, Vertica passes the input table to the function in the library to process.

Important
Installing an untrusted UDL function can compromise the security of the server. UDxs can contain arbitrary code. In particular, user-defined source functions can read data from any arbitrary location. It is up to the developer of the function to enforce proper security limitations. Superusers must not grant access to UDxs to untrusted users.

Syntax

```
CREATE [ OR REPLACE ] PARSER [ IF NOT EXISTS ]
  [[database.]schema.]function AS
  [ LANGUAGE 'language' ]
  NAME 'factory'
  LIBRARY library
  [ FENCED | NOT FENCED ]
```

Arguments

OR REPLACE

If a function with the same name and arguments exists, replace it. You can use this to change between fenced and unfenced modes, for example. If you do not use this directive and the function already exists, the CREATE statement returns with a rollback error.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

IF NOT EXISTS

If a function with the same name and arguments exists, return without creating the function.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

[*database* .] *schema*

Database and schema. The default schema is public. If you specify a database, it must be the current database.

*** function ***

Name of the function to create. This is the name used in SQL invocations of the function. It does not need to match the name of the factory, but it is less confusing if they are the same or similar.
The function name must conform to the restrictions on Identifiers.

LANGUAGE ' *language* '

The language used to develop this function, one of the following:

- C++ (default)
- Java
- Python

NAME ' *factory* '

Name of the factory class that generates the function instance. This is the same name used by the RegisterFactory class.

LIBRARY *library*

Name of the C++ library shared object file, Python file, or Java Jar file. This library must already have been loaded by CREATE LIBRARY.

FENCED | NOT FENCED

Enables or disables fenced mode for this function.

Default: FENCED

Privileges

Superuser

Examples

The following example demonstrates loading a library named BasicIntegrerParserLib, then defining a parser function named BasicIntegerParser that is mapped to the BasicIntegerParserFactory factory class in the library:

```
=> CREATE LIBRARY BasicIntegerParserLib as '/opt/vertica/sdk/examples/build/BasicIntegerParser.so';
CREATE LIBRARY
=> CREATE PARSER BasicIntegerParser AS LANGUAGE 'C++' NAME 'BasicIntegerParserFactory' LIBRARY BasicIntegerParserLib;
CREATE PARSER FUNCTION
=> \x
Expanded display is on.
=> SELECT * FROM user_functions;
-[ RECORD 1 ]----------+--------------------
schema_name            | public
function_name          | BasicIntegerParser
procedure_type         | User Defined Parser
function_return_type   |
function_argument_type |
function_definition    |
volatility             |
is_strict              | f
is_fenced              | f
comment                |
```

See also

- DROP PARSER
- USER_FUNCTIONS
- User-defined load (UDL)

CREATE SOURCE

Adds a user-defined load source function to the catalog. The library containing the function must have been previously added using CREATE LIBRARY .

CREATE SOURCE automatically determines the function parameters and return value from data supplied by the factory class. Vertica supports overloading load source functions. When you call the SQL function, Vertica passes the input table to the function in the library to process.

Important
Installing an untrusted UDL function can compromise the security of the server. UDxs can contain arbitrary code. In particular, user-defined source functions can read data from any arbitrary location. It is up to the developer of the function to enforce proper security limitations. Superusers must not grant access to UDxs to untrusted users.

Syntax

```
CREATE [ OR REPLACE ] SOURCE [ IF NOT EXISTS ]
   [[database.]schema.]function AS
   [ LANGUAGE 'language' ]
   NAME 'factory'
   LIBRARY library
   [ FENCED | NOT FENCED ]
```

Arguments

OR REPLACE

If a function with the same name and arguments exists, replace it. You can use this to change between fenced and unfenced modes, for example. If you do not use this directive and the function already exists, the CREATE statement returns with a rollback error.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

IF NOT EXISTS

If a function with the same name and arguments exists, return without creating the function.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** function ***

Name of the function to create. This is the name used in SQL invocations of the function. It does not need to match the name of the factory, but it is less confusing if they are the same or similar.
The function name must conform to the restrictions on Identifiers .

LANGUAGE ' *language* '

Language used to develop this function, one of the following:

- C++ (default)
- Java

NAME ' *factory* '

Name of the factory class that generates the function instance. This is the same name used by the RegisterFactory class.

LIBRARY *library*

Name of the C++ library shared object file or Java Jar file. This library must already have been loaded by CREATE LIBRARY .

FENCED | NOT FENCED

Enables or disables fenced mode for this function.

**Default: ** FENCED

Privileges

Superuser

Examples

The following example demonstrates loading a library named curllib , then defining a source function named curl that is mapped to the CurlSourceFactory factory class in the library:

```
=> CREATE LIBRARY curllib as '/opt/vertica/sdk/examples/build/cURLLib.so';
CREATE LIBRARY
=> CREATE SOURCE curl AS LANGUAGE 'C++' NAME 'CurlSourceFactory' LIBRARY curllib;
CREATE SOURCE
=> \x
Expanded display is on.
=> SELECT * FROM user_functions;
-[ RECORD 1 ]----------+--------------------
schema_name            | public
function_name          | curl
procedure_type         | User Defined Source
function_return_type   |
function_argument_type |
function_definition    |
volatility             |
is_strict              | f
is_fenced              | f
comment                |
```

See also

- DROP SOURCE
- USER_FUNCTIONS
- User-defined load (UDL)

CREATE TRANSFORM FUNCTION

Adds a user-defined transform function (UDTF) to the catalog. The library containing the function must have been previously added using CREATE LIBRARY .

CREATE TRANSFORM FUNCTION automatically determines the function parameters and return value from data supplied by the factory class. Vertica supports overloading transform functions. When you call the SQL function, Vertica passes the input table to the transform function in the library to process.

Syntax

```
CREATE [ OR REPLACE ] TRANSFORM FUNCTION [ IF NOT EXISTS ]
  [[database.]schema.]function AS
  [ LANGUAGE 'language' ]
  NAME 'factory'
  LIBRARY library
  [ FENCED | NOT FENCED ]
```

Arguments

OR REPLACE

If a function with the same name and arguments exists, replace it. You can use this to change between fenced and unfenced modes, for example. If you do not use this directive and the function already exists, the CREATE statement returns with a rollback error.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

IF NOT EXISTS

If a function with the same name and arguments exists, return without creating the function.
OR REPLACE and IF NOT EXISTS are mutually exclusive.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** function ***

Name of the function to create. This is the name used in SQL invocations of the function. It does not need to match the name of the factory, but it is less confusing if they are the same or similar.
The function name must conform to the restrictions on Identifiers .

LANGUAGE ' *language* '

The language used to develop this function, one of the following:

- C++ (default)
- Java
- R
- Python

NAME ' *factory* '

Name of the factory class that generates the function instance.

LIBRARY *library*

Name of the C++ shared object file, Python file, Java Jar file, or R functions file. This library must already have been loaded by CREATE LIBRARY .

FENCED | NOT FENCED

Enables or disables fenced mode for this function. Functions written in Java and R always run in fenced mode.

Default: FENCED

Privileges

Non-superuser:

- CREATE privilege on the function's schema
- USAGE privilege on the function's library

Restrictions

A query that includes a UDTF cannot:

- Include statements other than the SELECT statement that calls this UDTF and a PARTITION BY expression
- Call an analytic function
- Call another UDTF
- Include one of the following clauses:
  - TIMESERIES
  - Pattern matching
  - Gap filling and interpolation

Examples

The following example loads a library named TransformFunctions and then defines a function named tokenize that is mapped to the TokenFactory factory class in the library:

```
=> CREATE LIBRARY TransformFunctions AS
  '/home/dbadmin/TransformFunctions.so';
CREATE LIBRARY
=> CREATE TRANSFORM FUNCTION tokenize
  AS LANGUAGE 'C++' NAME 'TokenFactory' LIBRARY TransformFunctions;
CREATE TRANSFORM FUNCTION
```

See also

- DROP FUNCTION
- Developing user-defined extensions (UDxs)

CREATE HCATALOG SCHEMA

Define a schema for data stored in a Hive data warehouse using the HCatalog Connector. For more information, see Using the HCatalog Connector .

Most of the optional parameters are read out of Hadoop configuration files if available. If you copied the Hadoop configuration files as described in Configuring Vertica for HCatalog , you can omit most parameters. By default this statement uses the values specified in those configuration files. If the configuration files are complete, the following is a valid statement:

```
=> CREATE HCATALOG SCHEMA hcat;
```

If a value is not specified in the configuration files and a default is shown in the parameter list, then that default value is used.

Some parameters apply only if you are using HiveServer2 (the default). Others apply only if you are using WebHCat, a legacy Hadoop service. When using HiveServer2, use HIVESERVER2_HOSTNAME to specify the server host. When using WebHCat, use WEBSERVICE_HOSTNAME to specify the server host.

If you need to use WebHCat you must also set the HCatalogConnectorUseHiveServer2 configuration parameter to 0. See Apache Hadoop parameters .

After creating the schema, you can change many (but not all) parameters using ALTER HCATALOG SCHEMA .

Syntax

```
CREATE HCATALOG SCHEMA [IF NOT EXISTS] schemaName
  [AUTHORIZATION user-id]
  [WITH [param=value [,...] ] ]
```

Arguments

Argument	Description
[IF NOT EXISTS]	If given, the statement exits without an error when the schema named in *schemaName* already exists.
schemaName	The name of the schema to create in the Vertica catalog. The tables in the Hive database will be available through this schema.
AUTHORIZATION *user-id*	The name of a Vertica account to own the schema being created. This parameter is ignored if Kerberos authentication is being used; in that case the current vsql user is used.

Parameters

Parameter	Description

HOSTNAME	The hostname, IP address, or URI of the database server that stores the Hive data warehouse's metastore information. If you specify this parameter and do not also specify PORT , then this value must be in the URI format used for hive.metastore.uris in hive-site.xml. If the Hive metastore supports High Availability, you can specify a comma-separated list of URIs for this value. If this value is not specified, hive-site.xml must be available.
PORT	The port number on which the metastore database is running. If you specify this parameter, you must also specify HOSTNAME and it must be a name or IP address (not a URI).
HIVESERVER2_HOSTNAME	The hostname or IP address of the HiveServer2 service. This parameter is optional if in hive-site.xml you set one of the following properties: • hive.server2.thrift.bind.host to a valid host • hive.server2.support.dynamic.service.discovery to true This parameter is ignored if you are using WebHCat.
WEBSERVICE_HOSTNAME	The hostname or IP address of the WebHCat service, if using WebHCat instead of HiveServer2. If this value is not specified, webhcat-site.xml must be available.
WEBSERVICE_PORT	The port number on which the WebHCat service is running, if using WebHCat instead of HiveServer2. If this value is not specified, webhcat-site.xml must be available.
WEBHDFS_ADDRESS	The host and port ("host:port") for the WebHDFS service. This parameter is used only for reading ORC and Parquet files. If this value is not set, hdfs-site.xml must be available to read these file types through the HCatalog Connector.
HCATALOG_SCHEMA	The name of the Hive schema or database that the Vertica schema is being mapped to. The default is *schemaName* .
CUSTOM_PARTITIONS	Whether the Hive schema uses custom partition locations ('YES' or 'NO'). If the schema uses custom partition locations, then Vertica queries Hive to get those locations when executing queries. These additional Hive queries can be expensive, so use this parameter only if you need to. The default is 'NO' (disabled). For more information, see Using Partitioned Data .
HCATALOG_USER	The username of the HCatalog user to use when making calls to the HiveServer2 or WebHCat server. The default is the current database user.
HCATALOG_CONNECTION_TIMEOUT	The number of seconds the HCatalog Connector waits for a successful connection to the HiveServer or WebHCat server. A value of 0 means wait indefinitely.
HCATALOG_SLOW_TRANSFER_LIMIT	The lowest data transfer rate (in bytes per second) from the HiveServer2 or WebHCat server that the HCatalog Connector accepts. See HCATALOG_SLOW_TRANSFER_TIME for details.
HCATALOG_SLOW_TRANSFER_TIME	The number of seconds the HCatalog Connector waits before enforcing the data transfer rate lower limit. After this time has passed, the HCatalog Connector tests whether the data transfer rate is at least as fast as the value set in HCATALOG_SLOW_TRANSFER_LIMIT. If it is not, then the HCatalog Connector breaks the connection and terminates the query.
SSL_CONFIG	The path of the Hadoop ssl-client.xml configuration file. This parameter is required if you are using HiveServer2 and it uses SSL wire encryption. This parameter is ignored if you are using WebHCat.

The default values for HCATALOG_CONNECTOR_TIMEOUT, HCATALOG_SLOW_TRANSFER_LIMIT, and HCATALOG_SLOW_TRANSFER_TIME are set by the database configuration parameters HCatConnectionTimeout, HCatSlowTransferLimit, and HCatSlowTransferTime. See Apache Hadoop parameters for more information.

Configuration files

The HCatalog Connector uses the following values from the Hadoop configuration files if you do not override them when creating the schema.

File	Properties
hive-site.xml	hive.server2.thrift.bind.host (used for HIVESERVER2_HOSTNAME)
	hive.server2.thrift.port
	hive.server2.transport.mode
	hive.server2.authentication
	hive.server2.authentication.kerberos.principal
	hive.server2.support.dynamic.service.discovery
	hive.zookeeper.quorum (used as HIVESERVER2_HOSTNAME if dynamic service discovery is enabled)
	hive.zookeeper.client.port
	hive.server2.zookeeper.namespace
	hive.metastore.uris (used for HOSTNAME and PORT)
ssl-client.xml	ssl.client.truststore.location
	ssl.client.truststore.password

Privileges

The user must be a superuser or be granted all permissions on the database to use this statement.

The user also requires access to Hive data in one of the following ways:

- Have USAGE permissions on *hcatalog_schema* , if Hive does not use an authorization service (Sentry or Ranger) to manage access.
- Have permission through an authorization service, if Hive uses it to manage access. In this case you must either set EnableHCatImpersonation to 0, to access data as the Vertica principal, or grant users access to the HDFS data. For Sentry, you can use ACL synchronization to manage HDFS access.
- Be the dbadmin user, with or without an authorization service.

Examples

The following example shows how to use CREATE HCATALOG SCHEMA to define a new schema for tables stored in a Hive database and then query the system tables that contain information about those tables:

```
=> CREATE HCATALOG SCHEMA hcat WITH HOSTNAME='hcathost' PORT=9083
   HCATALOG_SCHEMA='default' HIVESERVER2_HOSTNAME='hs.example.com'
   SSL_CONFIG='/etc/hadoop/conf/ssl-client.xml' HCATALOG_USER='admin';
CREATE SCHEMA
=> \x
Expanded display is on.

=> SELECT * FROM v_catalog.hcatalog_schemata;
-[ RECORD 1 ]----------------+-------------------------------------------
schema_id                    | 45035996273748224
schema_name                  | hcat
schema_owner_id              | 45035996273704962
schema_owner                 | admin
create_time                  | 2017-12-05 14:43:03.353404-05
hostname                     | hcathost
port                         | -1
hiveserver2_hostname         | hs.example.com
webservice_hostname          |
webservice_port              | 50111
webhdfs_address              | hs.example.com:50070
hcatalog_schema_name         | default
ssl_config                   | /etc/hadoop/conf/ssl-client.xml
hcatalog_user_name           | admin
hcatalog_connection_timeout  | -1
hcatalog_slow_transfer_limit | -1
hcatalog_slow_transfer_time  | -1
custom_partitions            | f

=> SELECT * FROM v_catalog.hcatalog_table_list;
-[ RECORD 1 ]------+------------------
table_schema_id    | 45035996273748224
table_schema       | hcat
hcatalog_schema    | default
table_name         | nation
hcatalog_user_name | admin
-[ RECORD 2 ]------+------------------
table_schema_id    | 45035996273748224
table_schema       | hcat
hcatalog_schema    | default
table_name         | raw
hcatalog_user_name | admin
-[ RECORD 3 ]------+------------------
table_schema_id    | 45035996273748224
table_schema       | hcat
hcatalog_schema    | default
table_name         | raw_rcfile
hcatalog_user_name | admin
-[ RECORD 4 ]------+------------------
table_schema_id    | 45035996273748224
table_schema       | hcat
hcatalog_schema    | default
table_name         | raw_sequence
hcatalog_user_name | admin
```

The following example shows how to specify more than one metastore host.

```
=> CREATE HCATALOG SCHEMA hcat
   WITH HOSTNAME='thrift://node1.example.com:9083,thrift://node2.example.com:9083';
```

The following example shows how to include custom partition locations:

```
=> CREATE HCATALOG SCHEMA hcat WITH HCATALOG_SCHEMA='default'
   HIVESERVER2_HOSTNAME='hs.example.com'
   CUSTOM_PARTITIONS='yes';
```

CREATE KEY

Creates a private key.

Syntax

```
CREATE [TEMP[ORARY]] KEY name
    { 'AES' [ PASSWORD 'password' ] | 'RSA' }
    {LENGTH length | AS key_text}
```

Parameters

TEMPORARY

Create with session scope. The key is stored in memory and is valid only for the current session.

*** name ***

The name of the key.

*** password ***

Password for the key.

*** length ***

Size of the key in bits.

Example: 2048

*** key_text ***

The contents of the key to import.

Example:

```
-----BEGIN RSA PRIVATE KEY-----...ABCD1234...-----END RSA PRIVATE KEY-----
```

Privileges

Superuser

Examples

See Generating TLS certificates and keys .

- CREATE CERTIFICATE

CREATE LIBRARY

Loads a library containing user-defined extensions (UDxs) into the Vertica catalog. Vertica automatically distributes copies of the library file and supporting libraries to all cluster nodes.

Because libraries are added to the database catalog, they persist across database restarts.

After loading a library in the catalog, you can use statements such as CREATE FUNCTION to define the extensions contained in the library. See Developing user-defined extensions (UDxs) for details.

Syntax

```
CREATE [OR REPLACE] LIBRARY
  [[database.]schema.]name
  AS 'path'
  [ DEPENDS 'depends-path' ]
  [ LANGUAGE 'language' ]
```

Arguments

OR REPLACE

If a library with the same name exists, replace it. UDxs defined in the catalog that reference the updated library automatically start using the new library file.

If you do not use this directive and the library already exists, the CREATE statement returns with an error.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

name

Name of the library to create. This is the name used when creating functions in the library (see Creating UDx Functions). While not required, it is good practice to match the file name.

AS *path*

Path of the library to load, either an absolute path on the initiator node file system or a URI for another supported file system or object store .

DEPENDS ' *depends-path* '

Files or libraries on which this library depends, one or more files or directories on the initiator node file system or other supported file systems or object stores . For a directory, end the path entry with a slash (/), optionally followed by a wildcard (*). To specify more than one file, separate entries with colons (:).
If any path entry contain colons, such as a URI, place brackets around the entire DEPENDS path and use double quotes for the individual path elements, as in the following example:

```
DEPENDS '["s3://mybucket/gson-2.3.1.jar"]'
```

To specify libraries with multiple directory levels, see Multi-level Library Dependencies .

DEPENDS has no effect for libraries written in R. R packages must be installed locally on each node, including external dependencies.

Important
The performance of CREATE LIBRARY can degrade in Eon Mode, in proportion to the number and depth of dependencies specified by the DEPENDS clause.

If a Java library depends on native libraries (SO files), use DEPENDS to specify the path and call System.loadLibrary() in your UDx to load the native libraries from that path.

LANGUAGE ' *language* '

The programming language of the functions in the library, one of:

- C++ (default)
- Python
- Java
- R

Privileges

Superuser, or UDXDEVELOPER and CREATE on the schema. Non-superusers must explicitly enable the UDXDEVELOPER role, as in the following example:

```
=> SET ROLE UDXDEVELOPER;
SET

-- Not required, but you can confirm the role as follows:
=> SHOW ENABLED ROLES;
    name     |   setting
---------------+--------------
 enabled roles | udxdeveloper
(1 row)

=> CREATE LIBRARY MyLib AS '/home/dbadmin/my_lib.so';
CREATE LIBRARY

-- Create functions...

-- UDXDEVELOPER also grants DROP (replace):
=> CREATE OR REPLACE LIBRARY MyLib AS '/home/dbadmin/my_lib.so';
```

Requirements

- Vertica makes its own copies of the library files. Later modification or deletion of the original files specified in the statement does not affect the library defined in the catalog. To update the library, use ALTER LIBRARY .

- Loading a library does not guarantee that it functions correctly. CREATE LIBRARY performs some basic checks on the library file to verify it is compatible with Vertica. The statement fails if it detects that the library was not correctly compiled or it finds other basic incompatibilities. However, CREATE LIBRARY cannot detect many other issues in shared libraries.

Multi-level library dependencies

If a DEPENDS clause specifies a library with multiple directory levels, Vertica follows the library path to include all subdirectories of that library. For example, the following CREATE LIBRARY statement enables the UDx library mylib to import all Python packages and modules that it finds in subdirectories of site-packages :

```
=> CREATE LIBRARY mylib AS '/path/to/python_udx' DEPENDS '/path/to/python/site-packages' LANGUAGE 'Python';
```

Important

DEPENDS can specify Java library dependencies that are up to 100 levels deep.

Examples

Load a library in the home directory of the dbadmin account:

```
=> CREATE LIBRARY MyFunctions AS '/home/dbadmin/my_functions.so';
```

Load a library located in the directory where you started vsql :

```
=> \set libfile '\''`pwd`'/MyOtherFunctions.so\'';
=> CREATE LIBRARY MyOtherFunctions AS :libfile;
```

Load a library from the cloud:

```
=> CREATE LIBRARY SomeFunctions AS 'S3://mybucket/extensions.so';
```

Load a library that depends on multiple JAR files in the same directory:

```
=> CREATE LIBRARY DeleteVowelsLib AS '/home/dbadmin/JavaLib.jar'
  DEPENDS '/home/dbadmin/mylibs/*' LANGUAGE 'Java';
```

Load a library with multiple explicit dependencies:

```
=> CREATE LIBRARY mylib AS '/path/to/java_udx'
  DEPENDS '/path/to/jars/this.jar:/path/to/jars/that.jar' LANGUAGE 'Java';
```

Load a library with dependencies in the cloud:

```
=> CREATE LIBRARY s3lib AS 's3://mybucket/UdlLib.jar'
  DEPENDS '["s3://mybucket/gson-2.3.1.jar"]' LANGUAGE 'Java';
```

CREATE LOAD BALANCE GROUP

Creates a group of network addresses that can be targeted by a load balancing routing rule. You create a group either using a list of network addresses, or basing it on one or more fault groups or subclusters.

> **Note**
> You cannot add multiple network addresses for one node to the same load balancing group.

Syntax

```
CREATE LOAD BALANCE GROUP group_name WITH {
    ADDRESS address[,...]
  | FAULT GROUP  fault_group[,...] FILTER 'IP_range'
  | SUBCLUSTER subcluster[,...] FILTER 'IP_range'
  }
  [ POLICY 'policy_setting' ]
```

Parameters

group_name

Name of the group to create. You use this name later when defining load balancing rules.

***address* [,...]**

Comma-delimited list of network addresses you created earlier.

***fault_group* [,...]**

Comma-delimited list of fault groups to use as the basis of the load balance group.

> **Note**
> Before you create your load balance group from a fault group, you must create network addresses on the nodes you want in your load balance group. Load balance groups only work with the network addresses you define on nodes, rather than IP addresses. See CREATE NETWORK ADDRESS .

***subcluster* [,...]**

Comma-delimited list of subclusters to use as the basis of the load balance group.

> **Note**
> As with fault groups, you must create network addresses on the nodes in the subcluster you want to be part of the load balance group.

IP_range

Range of IP addresses in CIDR notation to include in the load balance group from the fault groups or subclusters. This range can be either IPv4 or IPv6. Only nodes that have a network address with an IP address that falls within this range are added to the load balancing group.

policy_setting

Determines how the initially-contacted node chooses a target from the group, one of the following:

- ROUNDROBIN (default) rotates among the available members of the load balancing group. The initially-contacted node keeps track of which node it chose last time, and chooses the next one in the cluster.

  > **Note**
  > Each node in the cluster maintains its own round-robin pointer that indicates which node it should pick next for each load-balancing group. Therefore, if clients connect to different initial nodes, they may be redirected to the same node.

- RANDOM chooses an available node from the group randomly.
- NONE disables load balancing.

Privileges

Superuser

Examples

The following statement demonstrates creating a load balance group that contains several network addresses:

```
=> CREATE NETWORK ADDRESS addr01 ON v_vmart_node0001 WITH '10.20.110.21';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS addr02 ON v_vmart_node0002 WITH '10.20.110.22';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS addr03 on v_vmart_node0003 WITH '10.20.110.23';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS addr04 on v_vmart_node0004 WITH '10.20.110.24';
CREATE NETWORK ADDRESS
=> CREATE LOAD BALANCE GROUP group_1 WITH ADDRESS addr01, addr02;
CREATE LOAD BALANCE GROUP
=> CREATE LOAD BALANCE GROUP group_2 WITH ADDRESS addr03, addr04;
CREATE LOAD BALANCE GROUP

=> SELECT * FROM LOAD_BALANCE_GROUPS;
   name   |  policy  |    filter     |        type         | object_name
----------+----------+---------------+---------------------+-------------
 group_1  | ROUNDROBIN |             | Network Address Group | addr01
 group_1  | ROUNDROBIN |             | Network Address Group | addr02
 group_2  | ROUNDROBIN |             | Network Address Group | addr03
 group_2  | ROUNDROBIN |             | Network Address Group | addr04
(4 rows)
```

This example demonstrates creating a load balancing group using a fault group:

```
=> CREATE FAULT GROUP fault_1;
CREATE FAULT GROUP
=> ALTER FAULT GROUP fault_1 ADD NODE  v_vmart_node0001;
ALTER FAULT GROUP
=> ALTER FAULT GROUP fault_1 ADD NODE  v_vmart_node0002;
ALTER FAULT GROUP
=> ALTER FAULT GROUP fault_1 ADD NODE  v_vmart_node0003;
ALTER FAULT GROUP
=> ALTER FAULT GROUP fault_1 ADD NODE  v_vmart_node0004;
ALTER FAULT GROUP
=> SELECT node_name,node_address,node_address_family,export_address
  FROM v_catalog.nodes;
   node_name    | node_address | node_address_family | export_address
----------------+--------------+---------------------+----------------
 v_vmart_node0001 | 10.20.110.21 | ipv4              | 10.20.110.21
 v_vmart_node0002 | 10.20.110.22 | ipv4              | 10.20.110.22
 v_vmart_node0003 | 10.20.110.23 | ipv4              | 10.20.110.23
 v_vmart_node0004 | 10.20.110.24 | ipv4              | 10.20.110.24
(4 rows)

=> CREATE LOAD BALANCE GROUP group_all WITH FAULT GROUP fault_1 FILTER
  '0.0.0.0/0';
CREATE LOAD BALANCE GROUP

=> CREATE LOAD BALANCE GROUP group_some WITH FAULT GROUP fault_1 FILTER
  '10.20.110.21/30';
CREATE LOAD BALANCE GROUP

=> SELECT * FROM LOAD_BALANCE_GROUPS;
     name     |  policy  |    filter     |        type         | object_name
--------------+----------+---------------+---------------------+-------------
 group_all    | ROUNDROBIN | 0.0.0.0/0     | Fault Group         | fault_1
 group_some   | ROUNDROBIN | 10.20.110.21/30 | Fault Group       | fault_1
(2 rows)
```

CREATE LOCAL TEMPORARY VIEW

Creates or replaces a local temporary view. Views are read only, so they do not support insert, update, delete, or copy operations. Local temporary views are session-scoped, so they are visible only to their creator in the current session. Vertica drops the view when the session ends.

> **Note**
> Vertica does not support global temporary views.

Syntax

```
CREATE [OR REPLACE] LOCAL TEMP[ORARY] VIEW view [ (column[,...] ) ] AS query
```

Parameters

OR REPLACE

Specifies to overwrite the existing view *view-name* . If you omit this option and *view-name* already exists, CREATE VIEW returns an error.

view

Identifies the view to create, where *view* conforms to conventions described in Identifiers . It must also be unique among all names of sequences, tables, projections, views, and models within the same schema.

***column* [,...]**

List of up to 9800 names to use as view column names. Vertica maps view column names to query columns according to the order of their respective lists. By default, the view uses column names as they are specified in the query.

AS *query*

A SELECT statement that the temporary view executes. The SELECT statement can reference tables, temporary tables, and other views.

Privileges

See Creating views .

Examples

The following CREATE LOCAL TEMPORARY VIEW statement creates the temporary view myview . This view sums all individual incomes of customers listed in the store.store_sales_fact table, and groups results by state:

```
=> CREATE LOCAL TEMP VIEW myview AS
  SELECT SUM(annual_income), customer_state FROM public.customer_dimension
    WHERE customer_key IN (SELECT customer_key FROM store.store_sales_fact)
    GROUP BY customer_state
    ORDER BY customer_state ASC;
```

The following example uses the temporary view myview with a WHERE clause that limits the results to combined salaries greater than $2 billion:

```
=> SELECT * FROM myview WHERE SUM > 2000000000;

    SUM     | customer_state
------------+----------------
 2723441590 | AZ
29253817091 | CA
 4907216137 | CO
 3769455689 | CT
 3330524215 | FL
 4581840709 | IL
 3310667307 | IN
 2793284639 | MA
 5225333668 | MI
 2128169759 | NV
 2806150503 | PA
 2832710696 | TN
14215397659 | TX
 2642551509 | UT
(14 rows)
```

CREATE LOCATION

Creates a storage location where Vertica can store data. After you create the location, you create storage policies that assign the storage location to the database objects that will store data in the location.

> **Caution**
> While no technical issue prevents you from using CREATE LOCATION to add one or more Network File System (NFS) storage locations, Vertica does not support NFS data or catalog storage except for MapR mount points. You will be unable to run queries against any other NFS data. When creating locations on MapR file systems, you must specify ALL NODES SHARED .
>
> If you use HDFS storage locations, the HDFS data must be available when you start Vertica. Your HDFS cluster must be operational, and the ROS files must be present. If you moved data files, or they are corrupted, or your HDFS cluster is not responsive, Vertica cannot start.

Syntax

```
CREATE LOCATION 'path'
   [NODE 'node' | ALL NODES]
   [SHARED]
   [USAGE 'usage']
   [LABEL 'label']
   [LIMIT 'size']
```

Arguments

path

Where to store this location's data. The type of file system on which the location is based determines the *path* format:

- Linux: Absolute path to the directory where Vertica can write the storage location's data.
- Shared file systems: See the URL specifications in HDFS file system , S3 object store , Google Cloud Storage (GCS) object store , and Azure Blob Storage object store .

HDFS storage locations have additional requirements .

ALL NODES | NODE ' *node* '

The node or nodes on which the storage location is defined, one of the following:

- ALL NODES (default): Create the storage location on each node. If SHARED is also specified, create the storage location once for use by all nodes.
- NODE ' *node* ' : Create the storage location on a single node, where *node* is the name of the node in the NODES system table. You cannot use this option with SHARED.

SHARED

Indicates the location set by *path* is shared (used by all nodes) rather than local to each node. You cannot specify individual nodes with SHARED; you must use ALL NODES.

Most remote file systems such as HDFS and S3 are shared. For these file systems, the *path* argument represents a single location in the remote file system where all nodes store data. If using a remote file system, you must specify SHARED, even for one-node clusters.

> **Note**
> If *path* is set to S3 communal storage, SHARED is always implied and can be omitted.

> **Deprecated**
> SHARED DATA and SHARED DATA,TEMP storage locations are deprecated.

USAGE ' *usage* '

The type of data the storage location can hold, where *usage* is one of the following:

- DATA,TEMP (default): The storage location can store persistent and temporary DML-generated data, and data for temporary tables.
- TEMP : A *path* -specified location to store DML-generated temporary data. If *path* is set to S3, then this location is used only when the RemoteStorageForTemp configuration parameter is set to 1, and TEMP must be qualified with ALL NODES SHARED. For details, see S3 Storage of Temporary Data .
- DATA : The storage location can only store persistent data.
- USER : Users with READ and WRITE privileges can access data and external tables of this storage location.
- DEPOT : The storage location is used in Eon Mode to store the depot. Only create DEPOT storage locations on local Linux file systems. Vertica allows a single DEPOT storage location per node. If you want to move your depot to different location (on a different file system, for example) you must first drop the old depot storage location, then create the new location.

LABEL ' *label* '

A label for the storage location, used when assigning the storage location to data objects. You use this name later when assigning the storage location to data objects.
Important
You must supply a label for depot storage locations.

LIMIT ' *size* '

Valid only if the storage location usage type is set to DEPOT , specifies the maximum amount of disk space that the depot can allocate from the storage location's file system.
You can specify *size* in two ways:

- *integer* % : Percentage of storage location disk size.
- *integer* {K|M|G|T} : Amount of storage location disk size in kilobytes, megabytes, gigabytes, or terabytes.

Important
The depot size cannot exceed 80 percent of the file system disk space where the depot is stored. If you specify a value that is too large, Vertica issues a warning and automatically changes the value to 80 percent of the file system size.

If you do not specify a limit, it is set to 60 percent.

Privileges

Superuser

File system access

The Vertica process must have read and write permissions to the location where data is to be stored. Each file system has its own requirements:

File system	Requirements
Linux	Database superuser account (usually named dbadmin) must have full read and write access to the directory in the *path* argument.
HDFS without Kerberos	A Hadoop user whose username matches the Vertica database administrator username (usually dbadmin) must have read and write access to the HDFS directory specified in the *path* argument. The UseServerIdentityOverUserIdentity configuration parameter must be set to true in the user session; otherwise Vertica tries to use the identity associated with the logged-in user.
HDFS with Kerberos	A Hadoop user whose username matches the principal in the keytab file on each Vertica node must have read and write access to the HDFS directory stored in the path argument. This is not the same as the database administrator username. The UseServerIdentityOverUserIdentity configuration parameter must be set to true in the user session; otherwise Vertica tries to use the Kerberos principal associated with the logged-in user.
Object stores (S3, GCS, Azure)	Database-level credentials must be specified and provide full read and write access to the location in the path argument. If session-level credentials are specified they are used, directly overriding the use of the storage location.

Examples

Create a storage location in the local Linux file system for temporary data storage:

```
=> CREATE LOCATION '/home/dbadmin/testloc' USAGE 'TEMP' LABEL 'tempfiles';
```

Create a storage location on HDFS. The HDFS cluster does not use Kerberos:

```
=> CREATE LOCATION 'hdfs://hadoopNS/vertica/colddata' ALL NODES SHARED
  USAGE 'data' LABEL 'coldstorage';
```

Create the same storage location, but on a Hadoop cluster that uses Kerberos. Note the output that reports the principal being used:

```
=> CREATE LOCATION 'hdfs://hadoopNS/vertica/colddata' ALL NODES SHARED
  USAGE 'data' LABEL 'coldstorage';
NOTICE 0: Performing HDFS operations using kerberos principal [vertica/hadoop.example.com]
CREATE LOCATION
```

Create a location for user data, grant access to it, and use it to create an external table:

```
=> CREATE LOCATION '/tmp' ALL NODES USAGE 'user';
CREATE LOCATION
=> GRANT ALL ON LOCATION '/tmp' to Bob;
GRANT PRIVILEGE
=> CREATE EXTERNAL TABLE ext1 (x integer) AS COPY FROM '/tmp/data/ext1.dat' DELIMITER ',';
CREATE TABLE
```

Create a user storage location on S3 and a role, so that users without their own S3 credentials can read data from S3 using the server credential:

```
  --- set database-level credential (once):
=> ALTER DATABASE DEFAULT SET AWSAuth = 'myaccesskeyid123456:mysecretaccesskey12345678901234567890123456789012345678901234';

=> CREATE LOCATION 's3://datalake' SHARED USAGE 'USER' LABEL 's3user';

=> CREATE ROLE ExtUsers;
  --- Assign users to this role using GRANT (Role).

=> GRANT READ ON LOCATION 's3://datalake' TO ExtUsers;
```

- ALTER_LOCATION_USE

- RETIRE_LOCATION
- SET_OBJECT_STORAGE_POLICY

CREATE NETWORK ADDRESS

Creates a network address that can be used as part of a connection load balancing policy. A network address creates a name in the Vertica catalog for an IP address and port number associated with a node. Nodes can have multiple network addresses, up to one for each IP address they have on the network.

Syntax

```
CREATE NETWORK ADDRESS name ON node WITH 'ip-address' [PORT port-number] [ENABLED | DISABLED]
```

Parameters

name

The name of the new network address. Use this name when creating connection load balancing groups.

node

The name of the node on which to create the network address. This should be name of the node as it appears in the node_name column of system table NODES .

ip-address

The IPv4 or and IPv6 address on the node to associate with the network address.

> **Note**
> Vertica does not verify that the IP address you supply in this parameter is actually associated with the specified node. Be sure that the IP address actually belongs to the node. Otherwise, your load balancing policy is liable to send a client connection to the wrong node, or a non-Vertica host. Vertica rejects IP address that are invalid for a node. For example, it checks whether the IP address falls in the loopback address range of 127.0.0.0/8. If it finds that the IP address is invalid, CREATE NETWORK ADDRESS returns an error.

PORT ***port-number***

Sets the port number for the network address. You must supply a network address when altering the port number.

ENABLED | **DISABLED**

Enables or disables the network address.

Privileges

Superuser

Examples

Create three network addresses, one for each node in a three-node cluster:

```
=> SELECT node_name,export_address from v_catalog.nodes;
     node_name      | export_address
--------------------+----------------
 v_vmart_br_node0001 | 10.20.100.62
 v_vmart_br_node0002 | 10.20.100.63
 v_vmart_br_node0003 | 10.20.100.64
(3 rows)

=> CREATE NETWORK ADDRESS node01 ON v_vmart_br_node0001 WITH '10.20.100.62';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node02 ON v_vmart_br_node0002 WITH '10.20.100.63';
CREATE NETWORK ADDRESS
=> CREATE NETWORK ADDRESS node03 ON v_vmart_br_node0003 WITH '10.20.100.64';
```

See also

CREATE NETWORK INTERFACE

Identifies a network interface to which a node belongs.

Use this statement when you want to configure import/export operations from individual nodes to other Vertica clusters. By default, when you install Vertica, it creates interfaces for all connected networks. You would only need CREATE NETWORK INTERFACE in situations where the network topology has changed since you installed Vertica.

> **Note**
> Do not confuse this statement with CREATE NETWORK ADDRESS, which is used to identify network addresses for connection load balancing (see Connection load balancing policies).

Syntax

```
CREATE NETWORK INTERFACE network-interface-name ON node-name [WITH] 'node-IP-address' [PORT port-number] [ENABLED | DISABLED]
```

network-interface-name

The name you assign to the network interface, where *network-interface-name* conforms to conventions described in Identifiers.

node-name

The name of the node.

node-IP-address

The node's IP address, either a public or private IP address. For more information, see Using Public and Private IP Networks.

PORT *port-number*

Sets the port number for the network interface. You must supply a network interface when altering the port number.

[ENABLED | DISABLED]

Enables or disables the network interface.

Privileges

Superuser

Examples

Create a network interface:

```
=> CREATE NETWORK INTERFACE mynetwork ON v_vmart_node0001 WITH '123.4.5.6' PORT 456 ENABLED;
```

CREATE NOTIFIER

Creates a push-based notifier to send event notifications and messages out of Vertica.

Syntax

```
CREATE NOTIFIER [ IF NOT EXISTS ] notifier-name ACTION 'notifier-type'
  [ ENABLE | DISABLE ]
  [ MAXPAYLOAD 'integer{K|M}' ]
  MAXMEMORYSIZE 'integer{K|M|G|T}'
  [ TLSMODE 'tls-mode' ]
  [ CA BUNDLE bundle-name [ CERTIFICATE certificate-name ] ]
  [ IDENTIFIED BY 'uuid' ]
  [ [NO] CHECK COMMITTED ]
  [ PARAMETERS 'adapter-params' ]
```

Parameters

IF NOT EXISTS

If an object with the same name exists, do not create it and proceed. If you omit this option and the object exists, Vertica generates a ROLLBACK error message. In both cases, the object is not created if it already exists.
The IF NOT EXISTS clause is useful for SQL scripts where you want to create an object if it does not already exist.

For related information, see ON_ERROR_STOP.

notifier-name

This notifier's unique identifier.

ACTION ' *notifier-type* '

String, the type of notifier, one of the following:

- URL, with the following format, that identifies one or more target Kafka servers:

```
kafka://kafka-server-ip-address:port-number
```

To enable failover when a Kafka server is unavailable, specify additional hosts in a comma-delimited list. For example:

```
kafka://192.0.2.0:9092,192.0.2.1:9092,192.0.2.2:9092
```

- syslog : Notifications are sent to syslog . To use notifiers of this type, you must set the SyslogEnabled parameter:

```
=> ALTER DATABASE DEFAULT SET SyslogEnabled = 1
```

Events monitored by this notifier type are not logged to MONITORING_EVENTS nor vertica.log .

ENABLE | DISABLE

Specifies whether to enable or disable the notifier.

Default: ENABLE .

MAXPAYLOAD ' *integer* {K|M} '

The maximum size of the message, up to 10^9 bytes, specified in kilobytes or megabytes.

The following restrictions apply:

- MAXPAYLOAD cannot be greater than MAXMEMORYSIZE .
- If you configure syslog to send messages to a remote destination, ensure that MaxMessageSize (in /etc/rsyslog for rsyslog) is greater than or equal to MAXPAYLOAD .

Defaults:

- Kafka: 1M
- syslog: 1M

MAXMEMORYSIZE ' *integer* {K|M|G|T} '

The maximum size of the internal notifier, up to 2 TB, specified in kilobytes, megabytes, gigabytes, or terabytes.

MAXMEMORYSIZE must be greater than MAXPAYLOAD .
If the size of the message queue exceeds MAXMEMORYSIZE , the notifier drops excess messages.

TLSMODE ' *tls-mode* '

Specifies the type of connection between the notifier and an endpoint, one of the following:

- disable (default): Plaintext connection.
- verify-ca : Encrypted connection, and the server's certificate is verified as being signed by a trusted CA.

If the notifier ACTION is 'syslog' , this parameter has no effect; you must configure syslog for TLS to enable encryption for these Vertica syslog notifiers.

CA BUNDLE *bundle-name*

Specifies a CA bundle . The certificates inside the bundle are used to validate the Kafka server's certificate if the TLSMODE requires it.
If a CA bundle is specified for a notifier that currently uses disable , which doesn't validate the Kafka server's certificate, the bundle will go unused when connecting to the Kafka server. This behavior persists unless the TLSMODE is changed to one that validates server certificates.

Changes to contents of the CA bundle take effect either after the notifier is disabled and re-enabled or after the database restarts. However, changes to which CA bundle the notifier uses takes effect immediately.

If the notifier ACTION is 'syslog' , this parameter has no effect; you must configure syslog for TLS to enable encryption for these Vertica syslog notifiers.

CERTIFICATE *certificate-name*

Specifies a client certificate for validation by the endpoint.
If the notifier ACTION is 'syslog' , this parameter has no effect; you must configure syslog for TLS to enable encryption for these Vertica syslog notifiers.

IDENTIFIED BY *uuid*

Specifies the notifier's unique identifier. If set, all the messages published by this notifier have this attribute.

[NO] CHECK COMMITTED

Specifies to wait for delivery confirmation before sending the next message in the queue.

Some messaging systems, like syslog, do not support delivery confirmation.

PARAMETERS ' *adapter-params* '

Specifies one or more optional adapter parameters that are passed as a string to the adapter. Adapter parameters apply only to the adapter associated with the notifier.

For Kafka notifiers, refer to Kafka and Vertica configuration settings .
For syslog notifiers, specify the severity of the event with eventSeverity= *severity* , where *severity* is one of the following:

- 0 : Emergency
- 1 : Alert
- 2 : Critical
- 3 : Error
- 4 : Warning
- 5 : Notice
- 6 : Informational
- 7 : Debug

Most syslog implementations, by default, do not log events with a severity level of 7. You must configure syslog to record these types of events.

Privileges

Superuser

Encrypted notifiers for SASL_SSL Kafka configurations

Follow this procedure to create or alter notifiers for Kafka endpoints that use SASL_SSL. Note that you must repeat this procedure whenever you change the TLSMODE, certificates, or CA bundle for a given notifier.

1. Use CREATE or ALTER to disable the notifier while setting the TLSMODE, certificate, and CA bundle.

```
=> ALTER NOTIFIER encrypted_notifier
   DISABLE
   TLSMODE 'verify-ca'
   CA BUNDLE ca_bundle2;
```

2. ALTER the notifier and set the proper rdkafka adapter parameters for SASL_SSL.

```
=> ALTER NOTIFIER encrypted_notifier PARAMETERS
 'sasl.username=user;sasl.password=password;sasl.mechanism=PLAIN;security.protocol=SASL_SSL';
```

3. Enable the notifier.

```
=> ALTER NOTIFIER encrypted_notifier ENABLE;
```

Examples

Kafka notifiers

Create a Kafka notifier:

```
=> CREATE NOTIFIER my_dc_notifier
   ACTION 'kafka://172.16.20.10:9092'
   MAXMEMORYSIZE '1G'
   IDENTIFIED BY 'f8b0278a-3282-4e1a-9c86-e0f3f042a971'
   NO CHECK COMMITTED;
```

Create a notifier with an adapter-specific parameter:

```
=> CREATE NOTIFIER my_notifier
   ACTION 'kafka://127.0.0.1:9092'
   MAXMEMORYSIZE '10M'
   PARAMETERS 'queue.buffering.max.ms=1000';
```

Create a notifier that uses an encrypted connection and verifies the Kafka server's certificate with the provided CA bundle :

```
=> CREATE NOTIFIER encrypted_notifier
   ACTION 'kafka://127.0.0.1:9092'
   MAXMEMORYSIZE '10M'
   TLSMODE 'verify-ca'
   CA BUNDLE ca_bundle;
```

Syslog notifiers

The following example creates a notifier that writes a message to syslog when the Data collector (DC) component LoginFailures updates:

1. Enable syslog notifiers for the current database:

```
=> ALTER DATABASE DEFAULT SET SyslogEnabled = 1;
```

2. Create and enable a syslog notifier v_syslog_notifier :

```
=> CREATE NOTIFIER v_syslog_notifier ACTION 'syslog'
   ENABLE
   MAXMEMORYSIZE '10M'
   IDENTIFIED BY 'f8b0278a-3282-4e1a-9c86-e0f3f042a971'
   PARAMETERS 'eventSeverity = 5';
```

3. Configure the syslog notifier v_syslog_notifier for updates to the LoginFailures DC component with SET_DATA_COLLECTOR_NOTIFY_POLICY :

```
=> SELECT SET_DATA_COLLECTOR_NOTIFY_POLICY('LoginFailures','v_syslog_notifier', 'Login failed!', true);
```

This notifier writes the following message to syslog (default location: /var/log/messages) when a user fails to authenticate as the user Bob :

```
Apr 25 16:04:58
vertica_host_01
vertica:
   Event Posted:
      Event Code:21
      Event Id:0
      Event Severity: Notice [5]
      PostedTimestamp: 2022-04-25 16:04:58.083063
      ExpirationTimestamp: 2022-04-25 16:04:58.083063
      EventCodeDescription: Notifier
      ProblemDescription: (Login failed!)
   {
     "_db":"VMart",
     "_schema":"v_internal",
     "_table":"dc_login_failures",
     "_uuid":"f8b0278a-3282-4e1a-9c86-e0f3f042a971",
     "authentication_method":"Reject",
     "client_authentication_name":"default: Reject",
     "client_hostname":"::1",
     "client_label":"",
     "client_os_user_name":"dbadmin",
     "client_pid":523418,
     "client_version":"",
     "database_name":"dbadmin",
     "effective_protocol":"3.8",
     "node_name":"v_vmart_node0001",
     "reason":"REJECT",
     "requested_protocol":"3.8",
     "ssl_client_fingerprint":"",
     "ssl_client_subject":"",

CREATE PROCEDURE (external)

Enterprise Mode only

Adds an external procedure to Vertica. See External procedures for more information.

Syntax

```
CREATE PROCEDURE [ IF NOT EXISTS ]
  [[database.]schema.]procedure( [ argument-list ] )
  AS executable
  LANGUAGE 'EXTERNAL'
  USER OS-user
```

Parameters

IF NOT EXISTS

If an object with the same name exists, do not create it and proceed. If you omit this option and the object exists, Vertica generates a ROLLBACK error message. In both cases, the object is not created if it already exists.
The IF NOT EXISTS clause is useful for SQL scripts where you want to create an object if it does not already exist.

For related information, see ON_ERROR_STOP .

This option cannot be used with OR REPLACE .

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** procedure ***

Specifies a name for the external procedure, where * procedure-name *conforms to conventions described in Identifiers .

argument-list

A comma-delimited list of procedure arguments, where each argument is specified as follows:

```
[ argname ] argtype
```

- *argname* optionally provides a descriptive name for this argument.
- *argtype* must be one of the following data types supported byVertica:
  - BIGINT
  - BOOLEAN
  - DECIMAL
  - DOUBLE PRECISION
  - FLOAT
  - FLOAT8
  - INT
  - INT8
  - INTEGER
  - MONEY
  - NUMBER
  - NUMERIC
  - REAL
  - SMALLINT
  - TINYINT
  - VARCHAR

executable

The name of the executable program in the procedures directory, a string.

OS-user

The owner of the file, a string. The owner:

- Cannot be root
- Must have execute privileges on *executable*

Privileges

Superuser

System security

- The procedure file must be owned by the database administrator (OS account) or by a user in the same group as the administrator. The procedure file must also have the set UID attribute enabled, and allow read and execute permission for the group.
- External procedures that you create with CREATE PROCEDURE (external) are always run with Linux dbadmin privileges. If a dbadmin or pseudosuperuser grants a non-dbadmin permission to run a procedure using GRANT (procedure) , be aware that the non-dbadmin user runs the procedure with full Linux dbadmin privileges.

Examples

The following example shows how to create a procedure named helloplanet for the procedure file helloplanet.sh . This file accepts one VARCHAR argument.

Create the file:

```
#!/bin/bash
echo "hello planet argument: $1" >> /tmp/myprocedure.log
```

Create the procedure with the following SQL:

```
=> CREATE PROCEDURE helloplanet(arg1 varchar) AS 'helloplanet.sh' LANGUAGE 'external' USER 'dbadmin';
```

See also

- DROP PROCEDURE (external)
- Installing external procedure executable files

CREATE PROCEDURE (stored)

Creates a stored procedure .

Syntax

```
CREATE [ OR REPLACE ] PROCEDURE [ IF NOT EXISTS ]
  [[database.]schema.]procedure( [ parameter-list ] )
  [ LANGUAGE 'language-name' ]
  [ SECURITY { DEFINER | INVOKER } ]
  AS $$ source $$;
```

Parameters

OR REPLACE

If a procedure with the same name already exists, replace it. Users and roles with privileges on the original procedure retain these privileges on the new procedure.

This option cannot be used with IF NOT EXISTS .

IF NOT EXISTS

If an object with the same name exists, do not create it and proceed. If you omit this option and the object exists, Vertica generates a ROLLBACK error message. In both cases, the object is not created if it already exists.
The IF NOT EXISTS clause is useful for SQL scripts where you want to create an object if it does not already exist.

For related information, see ON_ERROR_STOP .

This option cannot be used with OR REPLACE .

[database .] schema

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** procedure ***

The name of the stored procedure, where * procedure-name *conforms to conventions described in Identifiers .

parameter-list

A comma-delimited list of formal parameters, each specified as follows:

```
[ parameter-mode ] parameter-name parameter-type
```

- *parameter-name* : the name of the parameter.
- *parameter-type* : Any SQL data type , with the following exceptions:
  - DECIMAL
  - NUMERIC

- NUMBER
- MONEY
- UUID
- GEOGRAPHY
- GEOMETRY
- Complex types

language-name

Specifies the language of the procedure *source* , one of the following (both options refer to PLvSQL ; PLpgSQL is included to maintain compatibility with existing scripts):

- PLvSQL
- PLpgSQL

Default: PLvSQL

SECURITY { DEFINER | INVOKER }

Determines whose privileges to use when the procedure is called and executes it as if the user is one of the following:

- DEFINER: User who defined the procedure
- INVOKER: User who called the procedure

A procedure with SECURITY DEFINER effectively executes the procedure as that user, so changes to the database appear to be performed by the procedure's definer rather than its caller.

> **Caution**
> Improper use of SECURITY DEFINER can lead to the confused deputy problem and introduce vulnerabilities into your system like SQL injection.

For more information, see Executing stored procedures .

source

The procedure source code. For details, see Scope and structure .

Privileges

Non-superuser: CREATE on the procedure's schema

Examples

For more complex examples, see Stored procedures: use cases and examples

This procedure prints its arguments:

```
=> CREATE PROCEDURE raiseXY(IN x INT, y VARCHAR) LANGUAGE PLvSQL AS $$
BEGIN
   RAISE NOTICE 'x = %', x;
   RAISE NOTICE 'y = %', y;
   -- some processing statements
END;
$$;

CALL raiseXY(3, 'some string');
NOTICE 2005:  x = 3
NOTICE 2005:  y = some string
```

For more information on RAISE NOTICE, see Errors and diagnostics .

CREATE PROFILE

Creates a profile that controls password requirements for users.

Syntax

```
CREATE PROFILE profile-name LIMIT [
  PASSWORD_LIFE_TIME setting
  PASSWORD_MIN_LIFE_TIME setting
  PASSWORD_GRACE_TIME setting
  FAILED_LOGIN_ATTEMPTS setting
  PASSWORD_LOCK_TIME setting
  PASSWORD_REUSE_MAX setting
  PASSWORD_REUSE_TIME setting
  PASSWORD_MAX_LENGTH setting
  PASSWORD_MIN_LENGTH setting
  PASSWORD_MIN_LETTERS setting
  PASSWORD_MIN_UPPERCASE_LETTERS setting
  PASSWORD_MIN_LOWERCASE_LETTERS setting
  PASSWORD_MIN_DIGITS setting
  PASSWORD_MIN_SYMBOLS setting
  PASSWORD_MIN_CHAR_CHANGE setting ]
```

Parameters

> **Note**
> All parameters that are not explicitly set in a new profile are set to default , and inherit their settings from the default profile.

Name	Description
name	The name of the profile to create, where * name *conforms to conventions described in Identifiers . To modify the default profile, set *name* to default . For example: ALTER PROFILE DEFAULT LIMIT PASSWORD_MIN_SYMBOLS 1;
PASSWORD_LIFE_TIME	Set to an integer value, one of the following: • ≥ 1: The number of days a password remains valid. • UNLIMITED : Password remains valid indefinitely. After your password's lifetime and grace period expire, you must change your password on your next login, if you have not done so already.
PASSWORD_MIN_LIFE_TIME	Set to an integer value, one of the following: • Default: 0 • ≥ 1: The number of days a password must be set before it can be changed • UNLIMITED : Password can be reset at any time.
PASSWORD_GRACE_TIME	Set to an integer value, one of the following: • ≥ 1: The number of days a password can be used after it expires. • UNLIMITED : No grace period.
FAILED_LOGIN_ATTEMPTS	Set to an integer value, one of the following: • ≥ 1: The number of consecutive failed login attempts Vertica allows before locking your account. • UNLIMITED : Vertica allows an unlimited number of failed login attempts.

PASSWORD_LOCK_TIME	• ≥ 1: The number of days (units configurable with PasswordLockTimeUnit) a user's account is locked after FAILED_LOGIN_ATTEMPTS number of login attempts. The account is automatically unlocked when the lock time elapses. • UNLIMITED : Account remains indefinitely inaccessible until a superuser manually unlocks it.
PASSWORD_REUSE_MAX	Set to an integer value, one of the following: • ≥ 1: The number of times you must change your password before you can reuse an earlier password. • UNLIMITED : You can reuse an earlier password without any intervening changes.
PASSWORD_REUSE_TIME	Set to an integer value, one of the following: • ≥ 1: The number of days that must pass after a password is set before you can reuse it. • UNLIMITED : You can reuse an earlier password immediately.
PASSWORD_MAX_LENGTH	The maximum number of characters allowed in a password, one of the following: • Integer between 8 and 512, inclusive
PASSWORD_MIN_LENGTH	The minimum number of characters required in a password, one of the following: • 0 to PASSWORD_MAX_LENGTH • UNLIMITED : Minimum of PASSWORD_MAX_LENGTH
PASSWORD_MIN_LETTERS	Minimum number of letters (a-z and A-Z) that must be in a password, one of the following: • Integer between 0 and PASSWORD_MAX_LENGTH , inclusive • UNLIMITED : 0 (no minimum)
PASSWORD_MIN_UPPERCASE_LETTERS	Minimum number of uppercase letters (A-Z) that must be in a password, one of the following: • Integer between 0 and PASSWORD_MAX_LENGTH , inclusive • UNLIMITED : 0 (no minimum)
PASSWORD_MIN_LOWERCASE_LETTERS	Minimum number of lowercase letters (a-z) that must be in a password, one of the following: • Integer between 0 and PASSWORD_MAX_LENGTH , inclusive • UNLIMITED : 0 (no minimum)
PASSWORD_MIN_DIGITS	Minimum number of digits (0-9) that must be in a password, one of the following: • Integer between 0 and PASSWORD_MAX_LENGTH , inclusive • UNLIMITED : 0 (no minimum)
PASSWORD_MIN_SYMBOLS	Minimum number of symbols—printable non-letter and non-digit characters such as $, #, @—that must be in a password, one of the following: • Integer between 0 and PASSWORD_MAX_LENGTH , inclusive • UNLIMITED : 0 (no minimum)

PASSWORD_MIN_CHAR_CHANGE	Minimum number of characters that must be different from the previous password: • Default: 0 • Integer between 0 and PASSWORD_MAX_LENGTH , inclusive • UNLIMITED : 0 (no minimum)

Privileges

Superuser

Profile settings and client authentication

The following profile settings affect client authentication methods , such as LDAP or GSS:

- FAILED_LOGIN_ATTEMPTS
- PASSWORD_LOCK_TIME

All other profile settings are used only by Vertica to manage its passwords.

Examples

```
=> CREATE PROFILE sample_profile LIMIT PASSWORD_MAX_LENGTH 20;
```

- DROP PROFILE
- Creating a database name and password
- Profiles

CREATE PROJECTION

Creates metadata for a projection in the Vertica catalog. Vertica supports four types of projections:

- Standard projection : Stores collection of table data in a format that optimizes execution of certain queries on that table.
- Live aggregate projection : Stores the grouped results of queries that invoke aggregate functions (such as SUM) on table columns.
- Top-K projection : Stores the top *k* rows from partitions of selected rows.
- UDTF projection : Stores newly-loaded data after it is transformed and/or aggregated by user-defined transformation functions (UDTFs).

Complex data types have additional restrictions when used within a projection:

- Each projection must include at least one column that is a primitive type or native array.
- An AS SELECT clause can use a complex-type column, but any other expression must be of a scalar type or native array.
- The ORDER BY , PARTITION BY , and GROUP BY clauses cannot use complex types.
- If a projection does not include an ORDER BY or segmentation clause, Vertica uses only the primitive columns from the select list to order or segment data.
- Projection columns cannot be complex types returned from functions such as ARRAY_CAT .
- TopK and UDTF projections do not support complex types.

In this section

- Encoding types
- GROUPED clause
- Hash segmentation clause
- Unsegmented clause

Encoding types

Vertica supports various encoding and compression types, specified by the following ENCODING parameter arguments:

- AUTO (default)
- BLOCK_DICT
- BLOCKDICT_COMP
- BZIP_COMP
- COMMONDELTA_COMP
- DELTARANGE_COMP
- DELTAVAL

- GCDDELTA
- GZIP_COMP
- RLE
- Zstandard Compression

> **Note**
> Vertica supports the following encoding for numeric data types :
>
> - Precision ≤ 18: AUTO , BLOCK_DICT , BLOCKDICT_COMP , COMMONDELTA_COMP , DELTAVAL , GCDDELTA , and RLE
> - Precision > 18: AUTO , BLOCK_DICT , BLOCKDICT_COMP , RLE

You can set encoding types on a projection column when you create the projection . You can also change the encoding of one or more projection columns for a given table with ALTER TABLE...ALTER COLUMN .

AUTO (default)

AUTO encoding is ideal for sorted, many-valued columns such as primary keys. It is also suitable for general purpose applications for which no other encoding or compression scheme is applicable. Therefore, it serves as the default if no encoding/compression is specified.

Column data type	Default encoding type
BINARY/VARBINARY BOOLEAN CHAR/VARCHAR FLOAT	Lempel-Ziv-Oberhumer-based (LZO) compression
DATE/TIME/TIMESTAMP INTEGER INTERVAL	Compression scheme based on the delta between consecutive column values.

The CPU requirements for this type are relatively small. In the worst case, data might expand by eight percent (8%) for LZO and twenty percent (20%) for integer data.

BLOCK_DICT

For each block of storage, Vertica compiles distinct column values into a dictionary and then stores the dictionary and a list of indexes to represent the data block.

BLOCK_DICT is ideal for few-valued, unsorted columnswhere saving space is more important than encoding speed. Certain kinds of data, such as stock prices, are typically few-valued within a localized area after the data is sorted, such as by stock symbol and timestamp, and are good candidates for BLOCK_DICT. By contrast, long CHAR/VARCHAR columns are not good candidates for BLOCK_DICT encoding.

CHAR and VARCHAR columns that contain 0x00 or 0xFF characters should not be encoded with BLOCK_DICT. Also, BINARY/VARBINARY columns do not support BLOCK_DICT encoding.

BLOCK_DICT encoding requires significantly higher CPU usage than default encoding schemes. The maximum data expansion is eight percent (8%).

BLOCKDICT_COMP

This encoding type is similar to BLOCK_DICT except dictionary indexes are entropy coded. This encoding type requires significantly more CPU time to encode and decode and has a poorer worst-case performance. However, if the distribution of values is extremely skewed, using BLOCK_DICT_COMP encoding can lead to space savings.

BZIP_COMP

BZIP_COMP encoding uses the bzip2 compression algorithm on the block contents. See bzip web site for more information. This algorithm results in higher compression than the automatic LZO and gzip encoding; however, it requires more CPU time to compress. This algorithm is best used on large string columns such as VARCHAR, VARBINARY, CHAR, and BINARY. Choose this encoding type when you are willing to trade slower load speeds for higher data compression.

COMMONDELTA_COMP

This compression scheme builds a dictionary of all deltas in the block and then stores indexes into the delta dictionary using entropy coding.

This scheme is ideal for sorted FLOAT and INTEGER-based (DATE/TIME/TIMESTAMP/INTERVAL) data columns with predictable sequences and only occasional sequence breaks, such as timestamps recorded at periodic intervals or primary keys. For example, the following sequence compresses well: 300, 600, 900, 1200, 1500, 600, 1200, 1800, 2400. The following sequence does not compress well: 1, 3, 6, 10, 15, 21, 28, 36, 45, 55.

If delta distribution is excellent, columns can be stored in less than one bit per row. However, this scheme is very CPU intensive. If you use this scheme on data with arbitrary deltas, it can cause significant data expansion.

DELTARANGE_COMP

This compression scheme is primarily used for floating-point data; it stores each value as a delta from the previous one.

This scheme is ideal for many-valued FLOAT columns that are sorted or confined to a range. Do not use this scheme for unsorted columns that contain NULL values, as the storage cost for representing a NULL value is high. This scheme has a high cost for both compression and decompression.

To determine if DELTARANGE_COMP is suitable for a particular set of data, compare it to other schemes. Be sure to use the same sort order as the projection, and select sample data that will be stored consecutively in the database.

DELTAVAL

For INTEGER and DATE/TIME/TIMESTAMP/INTERVAL columns, data is recorded as a difference from the smallest value in the data block. This encoding has no effect on other data types.

DELTAVAL is best used for many-valued, unsorted integer or integer-based columns. CPU requirements for this encoding type are minimal, and data never expands.

GCDDELTA

For INTEGER and DATE/TIME/TIMESTAMP/INTERVAL columns, and NUMERIC columns with 18 or fewer digits, data is recorded as the difference from the smallest value in the data block divided by the greatest common divisor (GCD) of all entries in the block. This encoding has no effect on other data types.

ENCODING GCDDELTA is best used for many-valued, unsorted, integer columns or integer-based columns, when the values are a multiple of a common factor. For example, timestamps are stored internally in microseconds, so data that is only precise to the millisecond are all multiples of 1000. The CPU requirements for decoding GCDDELTA encoding are minimal, and the data never expands, but GCDDELTA may take more encoding time than DELTAVAL.

GZIP_COMP

This encoding type uses the gzip compression algorithm. See gzip web site for more information. This algorithm results in better compression than the automatic LZO compression, but lower compression than BZIP_COMP. It requires more CPU time to compress than LZO but less CPU time than BZIP_COMP. This algorithm is best used on large string columns such as VARCHAR, VARBINARY, CHAR, and BINARY. Use this encoding when you want a better compression than LZO, but at less CPU time than bzip2.

RLE

RLE (run length encoding) replaces sequences (runs) of identical values with a single pair that contains the value and number of occurrences. Therefore, it is best used for low cardinality columns that are present in the ORDER BY clause of a projection.

The Vertica execution engine processes RLE encoding run-by-run and the Vertica optimizer gives it preference. Use it only when run length is large, such as when low-cardinality columns are sorted.

Zstandard compression

Vertica supports three ZSTD compression types:

- ZSTD_COMP provides high compression ratios. This encoding type has a higher compression than gzip. Use this when you want a better compression than gzip. For general use cases, use this or the ZSTD_FAST_COMP encoding type.
- ZSTD_FAST_COMP uses the fastest compression level that the zstd library provides. It is the fastest encoding type of the zstd library, but takes up more space than the other two encoding types. For general use cases, use this or the ZSTD_COMP encoding type.
- ZSTD_HIGH_COMP offers the best compression in the zstd library. It is slower than the other two encoding types. Use this type when you need the best compression, with slower CPU time.

GROUPED clause

Enterprise Mode only

Groups two or more columns into a single disk file. This minimizes file I/O for work loads that:

- Read a large percentage of the columns in a table.
- Perform single row look-ups.
- Query against many small columns.

- Frequently update data in these columns.

If you have data that is always accessed together and it is not used in predicates, you can increase query performance by grouping these columns. Once grouped, queries can no longer independently retrieve from disk all records for an individual column independent of the other columns within the group.

> **Note**
> RLE encoding is reduced when an RLE column is grouped with one or more non-RLE columns.

When grouping columns you can:

- Group some of the columns:
  (a, GROUPED(b, c), d)
- Group all of the columns:
  (GROUPED(a, b, c, d))
- Create multiple groupings in the same projection:
  (GROUPED(a, b), GROUPED(c, d))

> **Note**
> Vertica performs dynamic column grouping. For example, to provide better read and write efficiency for small loads, Vertica ignores any projection-defined column grouping (or lack thereof) and groups all columns together by default.

Grouping correlated columns

The following example shows how to group highly correlated columns bid and ask . The stock column is stored separately.

```
=> CREATE TABLE trades (stock CHAR(5), bid INT, ask INT);
=> CREATE PROJECTION tradeproj (stock ENCODING RLE,
  GROUPED(bid ENCODING DELTAVAL, ask))
  AS (SELECT * FROM trades) KSAFE 1;
```

The following example show how to create a projection that uses expressions in the column definition. The projection contains two integer columns a and b , and a third column product_value that stores the product of a and b :

=> CREATE TABLE values (a INT, b INT

```
=> CREATE PROJECTION product (a, b, product_value) AS
  SELECT a, b, a*b FROM values ORDER BY a KSAFE;
```

Hash segmentation clause

Specifies how to segment projection data for distribution across all cluster nodes. You can specify segmentation for a table and a projection. If a table definition specifies segmentation, Vertica uses it for that table's auto-projections .

It is strongly recommended that you use Vertica's built-in HASH function, which distributes data evenly across the cluster, and facilitates optimal query execution.

Syntax

```
SEGMENTED BY expression ALL NODES [ OFFSET offset ]
```

Parameters

SEGMENTED BY *expression*

A general SQL expression. Hash segmentation is the preferred method of segmentation. Vertica recommends using its built-in HASH function, whose arguments resolve to table columns. If you use an expression other than HASH , Vertica issues a warning.

The segmentation expression should specify columns with a large number of unique data values and acceptable skew in their data distribution. In general, primary key columns that meet these criteria are good candidates for hash segmentation.
For details, see Expression Requirements below.

ALL NODES

Automatically distributes data evenly across all nodes when the projection is created. Node ordering is fixed.

OFFSET ***offset***

A zero-based offset that indicates on which node to start segmentation distribution.

This option is not valid for CREATE TABLE and CREATE TEMPORARY TABLE .

Important

If you create a projection for a table with the OFFSET option, be sure to create enough copies of each projection segment to satisfy system K-safety; otherwise, Vertica regards the projection as unsafe and cannot use it to query the table.

You can ensure K-safety compliance when you create projections by combining OFFSET and KSAFE options in the CREATE PROJECTION statement. On executing this statement, Vertica automatically creates the necessary number of projection copies.

Expression requirements

A segmentation expression must specify table columns as they are defined in the source table. Projection column names are not supported.

The following restrictions apply to segmentation expressions:

- All leaf expressions must be constants or column references to a column in the CREATE PROJECTION 's SELECT list.
- The expression must return the same value over the life of the database.
- Aggregate functions are not allowed.
- The expression must return non-negative INTEGER values in the range $0 <= x < 2^{63}$, and values are generally distributed uniformly over that range.

> **Note**
> If the expression produces a value outside the expected range—for example, a negative value—no error occurs, and the row is added to the projection's first segment.

Examples

The following CREATE PROJECTION statement creates projection public.employee_dimension_super . It specifies to include all columns in table public.employee_dimension . The hash segmentation clause invokes the Vertica HASH function to segment projection data on the column employee_key ; it also includes the ALL NODES clause, which specifies to distribute projection data evenly across all nodes in the cluster:

```
=> CREATE PROJECTION public.employee_dimension_super
   AS SELECT * FROM public.employee_dimension
   ORDER BY employee_key
   SEGMENTED BY hash(employee_key) ALL NODES;
```

Unsegmented clause

Specifies to distribute identical copies of table or projection data on all nodes across the cluster. Use this clause to facilitate distributed query execution on tables and projections that are too small to benefit from segmentation.

Vertica uses the same name to identify all instances of an unsegmented projection. For more information about projection name conventions, see Projection naming .

Syntax

```
UNSEGMENTED ALL NODES
```

Examples

This example creates an unsegmented projection for table store.store_dimension :

```
=> CREATE PROJECTION store.store_dimension_proj (storekey, name, city, state)
           AS SELECT store_key, store_name, store_city, store_state
           FROM store.store_dimension
           UNSEGMENTED ALL NODES;
CREATE PROJECTION

=>  SELECT anchor_table_name anchor_table, projection_name, node_name
    FROM PROJECTIONS WHERE projection_basename='store_dimension_proj';
 anchor_table  |  projection_name   |    node_name
---------------+-------------------+-----------------
 store_dimension | store_dimension_proj | v_vmart_node0001
 store_dimension | store_dimension_proj | v_vmart_node0002
 store_dimension | store_dimension_proj | v_vmart_node0003
(3 rows)
```

CREATE RESOURCE POOL

Creates a custom resource pool and sets one or more resource pool parameters.

Syntax

```
CREATE RESOURCE POOL pool-name [ FOR subcluster-spec ] [ parameter-name setting ]...
```

Parameters

pool-name

The name of the resource pool. Built-in pool names cannot be used for user-defined pools.

> **Note**
> If you specify a resource pool name with uppercase letters, Vertica converts them to lowercase letters.

FOR *subcluster-spec*

Eon Mode only, specifies to associate this resource pool with a subcluster, where *subcluster-spec* is one of the following:

- SUBCLUSTER *subcluster-name* : Creates the resource pool for an existing subcluster. You cannot be connected to this subcluster, otherwise Vertica returns an error.
- CURRENT SUBCLUSTER : Creates the resource pool for the subcluster that you are connected to.

If omitted, the resource pool is created globally. Attempts to create a global resource pool with the same name as a subcluster-specific resource pool return an error.

parameter-name

The parameter to set, listed below.

setting

The value to set on *parameter-name* . To reset this parameter to its default value, specify DEFAULT .

> **Note**
> Default values specified in this table pertain only to user-defined resource pools. For built-in pool default values, see Built-in resource pools configuration , or query system table RESOURCE_POOL_DEFAULTS .

CASCADE TO

Specifies a secondary resource pool for executing queries that exceed the [RUNTIMECAP](#RUNTIMECAP) setting of their assigned resource pool:

```
CASCADE TO secondary-pool
```

CPUAFFINITYMODE

Specifies whether the resource pool has exclusive or shared use of the CPUs specified in [CPUAFFINITYSET](#CPUAFFINITYSET) :

```
CPUAFFINITYMODE { SHARED | EXCLUSIVE | ANY }
```

- SHARED : Queries that run in this pool share its CPUAFFINITYSET CPUs with other Vertica resource pools.
- EXCLUSIVE : Dedicates CPUAFFINITYSET CPUs to this resource pool only, and excludes other Vertica resource pools. If CPUAFFINITYSET is set as a percentage, then that percentage of CPU resources available to Vertica is assigned solely for this resource pool.
- ANY (default): Queries in this resource pool can run on any CPU, invalid if CPUAFFINITYSET designates CPU resources.

Important
CPUAFFINITYMODE and CPUAFFINITYSET must be set together in the same statement.

CPUAFFINITYSET

Specifies which CPUs are available to this resource pool. All cluster nodes must have the same number of CPUs. The CPU resources assigned to this set are unavailable to general resource pools.

```
CPUAFFINITYSET {
 'cpu-index[,...]'
| 'cpu-indexi-cpu-indexn'
| 'integer%'
| NONE
}
```

- *cpu-index* [,...] : Dedicates one or more comma-delimited CPUs to this pool.
- **``* cpu-indexi * - * cpu-index * n ** : Dedicates a range of contiguous CPU indexes to this pool
- *integer* % : Percentage of all available CPUs to use for this pool. Vertica rounds this percentage down to include whole CPU units.
- NONE (default): No affinity set is assigned to this resource pool. The queries associated with this pool are executed on any CPU.

Important
CPUAFFINITYSET and CPUAFFINITYMODE must be set together in the same statement.

EXECUTIONPARALLELISM

Limits the number of threads used to process any single query issued in this resource pool.

```
EXECUTIONPARALLELISM { limit | AUTO }
```

- *limit* : An integer value between 1 and the number of cores. Setting this parameter to a reduced value increases throughput of short queries issued in the pool, especially if the queries are executed concurrently.
- AUTO or 0 (default): Vertica calculates the setting from the number of cores, available memory, and amount of data in the system. Unless memory is limited, or the amount of data is very small, Vertica sets this parameter to the number of cores on the node.

MAXCONCURRENCY

Sets the maximum number of concurrent execution slots available to the resource pool, across the cluster:

```
MAXCONCURRENCY { integer | NONE }
```

NONE (default) specifies unlimited number of concurrent execution slots.

MAXMEMORYSIZE

The maximum size per node the resource pool can grow by borrowing memory from the GENERAL pool:

```
MAXMEMORYSIZE {
 'integer%'
| 'integer{K|M|G|T}'
| NONE
}
```

- *integer* % : Percentage of total memory
- *integer* {K|M|G|T} : Amount of memory in kilobytes, megabytes, gigabytes, or terabytes
- NONE (default): Unlimited, pool can borrow any amount of available memory from the GENERAL pool.

MAXQUERYMEMORYSIZE

The maximum amount of memory that this pool can allocate at runtime to process a query. If the query requires more memory than this setting, Vertica stops execution and returns an error.
Set this parameter as follows:

```
MAXQUERYMEMORYSIZE {
 'integer%'
| 'integer{K|M|G|T}'
| NONE
}
```

- *integer* % : Percentage of MAXMEMORYSIZE for this pool.
- *integer* {K|M|G|T} : Amount of memory in kilobytes, megabytes, gigabytes, or terabytes, up to the value of MAXMEMORYSIZE .
- NONE (default): Unlimited; pool can borrow any amount of available memory from the GENERAL pool, within the limits set by MAXMEMORYSIZE .

MEMORYSIZE

The amount of total memory available to the Vertica resource manager that is allocated to this pool per node:

```
MEMORYSIZE {
 'integer%'
| 'integer{K|M|G|T}'
}
```

- *integer* % : Percentage of total memory
- *integer* {K|M|G|T} : Amount of memory in kilobytes, megabytes, gigabytes, or terabytes

Default: 0%. No memory allocated, the resource pool borrows memory from the GENERAL pool.

PLANNEDCONCURRENCY

Specifies the preferred number queries to execute concurrently in the resource pool. This setting applies to the entire cluster:

```
PLANNEDCONCURRENCY { num-queries | AUTO }
```

- *num-queries* : Integer value ≥ 1, specifies the preferred number of concurrently executing queries. When possible, query resource budgets are limited to allow this level of concurrent execution.
- AUTO (default): Value is calculated automatically at query runtime. Vertica sets this parameter to the lower of these two calculations, but never less than 4:
  - Number of logical cores
  - Memory divided by 2GB

For clusters where the number of logical cores differs on different nodes, AUTO can apply differently on each node. Distributed queries run like the minimal effective planned concurrency. Single node queries run with the planned concurrency of the initiator.

> **Tip**
> Change this parameter only after evaluating performance over a period of time.

PRIORITY

Specifies priority of queries in this pool when they compete for resources in the GENERAL pool:

```
PRIORITY { integer | HOLD }
```

- *integer* : A negative or positive integer value, where higher numbers denote higher priority:
  - User-defined pools: -100 to 100
  - Built-in pools SYSQUERY , RECOVERY , and TM : -110 to 110
- HOLD : Sets priority to -999 . Queries in this pool are queued until [QUEUETIMEOUT](#QUEUETIMEOUT) is reached.

Default: 0

QUEUETIMEOUT

Species how long a request can wait for pool resources before it is rejected:

```
QUEUETIMEOUT { integer | NONE }
```

- *integer* : Maximum wait time in seconds
- NONE : No maximum wait time, request can be queued indefinitely.

Default: **300 seconds**

RUNTIMECAP

Prevents runaway queries by setting the maximum time a query in the pool can execute. If a query exceeds this setting, it tries to cascade to a secondary pool:

```
RUNTIMECAP { 'interval' | NONE }
```

- *interval* : Maximum wait time expressed in the following format:
- NONE (default): No time limit on queries running in this pool.
  To specify a value in days, provide an integer value. To provide a value less than one day, provide the interval in the format hours:minutes:seconds . For example a value of 1:30:00 would equal 90 minutes.
  If the user or session also has a RUNTIMECAP , the shorter limit applies.

RUNTIMEPRIORITY

Determines how the resource manager should prioritize dedication of run-time resources (CPU, I/O bandwidth) to queries already running in this resource pool:

```
RUNTIMEPRIORITY { HIGH | MEDIUM | LOW }
```

Default : MEDIUM

RUNTIMEPRIORITYTHRESHOLD

Specifies in seconds a time limit in which a query must finish before the resource manager assigns to it the resource pool's RUNTIMEPRIORITY . All queries begin running at a HIGH priority. When a query's duration exceeds this threshold, it is assigned the RUNTIMEPRIORITY of the resource pool.

```
RUNTIMEPRIORITYTHRESHOLD seconds
```

Default: 2

SINGLEINITIATOR

By default, set to false for backward compatibility. Do not change this setting.

Privileges

Superuser

Examples

This example shows how to create a resource pool with MEMORYSIZE of 1800 MB.

```
=> CREATE RESOURCE POOL ceo_pool MEMORYSIZE '1800M' PRIORITY 10;
CREATE RESOURCE POOL
```

Assuming the CEO report user already exists, associate this user with the preceding resource pool using ALTER USER statement.

```
=> GRANT USAGE ON RESOURCE POOL ceo_pool to ceo_user;
GRANT PRIVILEGE
=> ALTER USER ceo_user RESOURCE POOL ceo_pool;
ALTER USER
```

Issue the following command to confirm that the ceo_user is associated with the ceo_pool:

```
=> SELECT * FROM users WHERE user_name ='ceo_user';
-[ RECORD 1 ]-----+--------------------------------------------------
user_id           | 45035996273733402
user_name         | ceo_user
is_super_user     | f
profile_name      | default
is_locked         | f
lock_time         |
resource_pool     | ceo_pool
memory_cap_kb     | unlimited
temp_space_cap_kb | unlimited
run_time_cap      | unlimited
all_roles         |
default_roles     |
search_path       | "$user", public, v_catalog, v_monitor, v_internal
```

This exampleshows how to create and designate secondary resource pools.

```
=> CREATE RESOURCE POOL rp3 RUNTIMECAP '5 minutes';
=> CREATE RESOURCE POOL rp2 RUNTIMECAP '3 minutes' CASCADE TO rp3;
=> CREATE RESOURCE POOL rp1 RUNTIMECAP '1 minute' CASCADE TO rp2;
=> SET SESSION RESOURCE_POOL = rp1;
```

This Eon Mode example confirms the current subcluster name, then creates a resource pool for the current subcluster:

```
=> SELECT CURRENT_SUBCLUSTER_NAME();
 CURRENT_SUBCLUSTER_NAME
-------------------------
 analytics_1
(1 row)

=> CREATE RESOURCE POOL dashboard FOR SUBCLUSTER analytics_1;
CREATE RESOURCE POOL
```

- Built-in resource pools configuration

Built-in pools

Vertica is preconfigured with built-in pools for various system tasks:

- GENERAL
- BLOBDATA
- DBD
- JVM
- METADATA
- RECOVERY
- REFRESH
- SYSQUERY
- TM

For details on resource pool settings, see ALTER RESOURCE POOL .

GENERAL

Catch-all pool used to answer requests that have no specific resource pool associated with them. Any memory left over after memory has been allocated to all other pools is automatically allocated to the GENERAL pool. The MEMORYSIZE parameter of the GENERAL pool is undefined (variable), however, the GENERAL pool must be at least 1GB in size and cannot be smaller than 25% of the memory in the system.

The MAXMEMORYSIZE parameter of the GENERAL pool has special meaning; when set as a % value it represents the percent of total physical RAM on the machine that the Resource manager can use for queries. By default, it is set to 95%. MAXMEMORYSIZE governs the total amount of RAM that the Resource Manager can use for queries, regardless of whether it is set to a percent or to a specific value (for example, '10GB').

User-defined pools can borrow memory from the GENERAL pool to satisfy requests that need extra memory until the MAXMEMORYSIZE parameter of that pool is reached. If the pool is configured to have MEMORYSIZE equal to MAXMEMORYSIZE, it cannot borrow any memory from the GENERAL pool. When multiple pools request memory from the GENERAL pool, they are granted access to general pool memory according to their priority setting. In this manner, the GENERAL pool provides some elasticity to account for point-in-time deviations from normal usage of individual resource pools.

Vertica recommends reducing the GENERAL pool MAXMEMORYSIZE if your catalog uses over 5 percent of overall memory. You can calculate what percentage of GENERAL pool memory the catalog uses as follows:

```
=> WITH memory_use_metadata AS (SELECT node_name, memory_size_kb FROM resource_pool_status WHERE pool_name='metadata'),
       memory_use_general  AS (SELECT node_name, memory_size_kb FROM resource_pool_status WHERE pool_name='general')
  SELECT m.node_name, ((m.memory_size_kb/g.memory_size_kb) * 100)::NUMERIC(4,2) pct_catalog_usage
  FROM memory_use_metadata m JOIN memory_use_general g ON m.node_name = g.node_name;
   node_name     | pct_catalog_usage
-----------------+-------------------
 v_vmart_node0001 |              0.41
 v_vmart_node0002 |              0.37
 v_vmart_node0003 |              0.36
(3 rows)
```

BLOBDATA

Controls resource usage for in-memory blobs. *In-memory blobs* are objects used by a number of the machine learning SQL functions. You should adjust this pool if you plan on processing large machine learning workloads. For information about tuning the pool, see Tuning for machine learning .

If a query using the BLOBDATA pool exceeds its query planning budget, then it spills to disk. For more information about tuning your query budget, see Query budgeting .

DBD

Controls resource usage for Database Designer processing. Use of this pool is enabled by configuration parameter DBDUseOnlyDesignerResourcePool , by default set to false.

By default, QUEUETIMEOUT is set to 0 for this pool. When resources are under pressure, this setting causes the DBD to time out immediately, and not be queued to run later. Database Designer then requests the user to run the designer later, when resources are more available.

Important
Do not change QUEUETIMEOUT or any DBD resource pool parameters.

JVM

Controls Java Virtual Machine resources used by Java User Defined Extensions. When a Java UDx starts the JVM, it draws resources from the those specified in the JVM resource pool. Vertica does not reserve memory in advance for the JVM pool. When needed, the pool can expand to 10% of physical memory or 2 GB of memory, whichever is smaller. If you are buffering large amounts of data, you may need to increase the size of the JVM resource pool.

You can adjust the size of your JVM resource pool by changing its configuration settings. Unlike other resource pools, the JVM resource pool does not release resources until a session is closed.

METADATA

Tracks memory allocated for catalog data and storage data structures. This pool increases in size as Vertica metadata consumes additional resources. Memory assigned to the METADATA pool is subtracted from the GENERAL pool, enabling the Vertica resource manager to make more effective use of available resources. If the METADATA resource pool reaches 75% of the GENERAL pool, Vertica stops updating METADATA memory size and displays a warning message in vertica.log . You can enable or disable the METADATA pool with configuration parameter EnableMetadataMemoryTracking .

If you created a "dummy" or "swap" resource pool to protect resources for use by your operating system, you can replace that pool with the METADATA pool.

Users cannot change the parameters of the METADATA resource pool.

RECOVERY

Used by queries issued when recovering another node of the database. The MAXCONCURRENCY parameter is used to determine how many concurrent recovery threads to use. You can use the PLANNEDCONCURRENCY parameter (by default, set to twice the MAXCONCURRENCY) to tune how to apportion memory to recovery queries.

See Tuning for recovery .

REFRESH

Used by queries issued by PROJECTION_REFRESHES operations. Refresh does not currently use multiple concurrent threads; thus, changes to the MAXCONCURRENCY values have no effect.

See Scenario: Tuning for Refresh .

SYSQUERY

Runs queries against all system monitoring and catalog tables . The SYSQUERY pool reserves resources for system table queries so that they are never blocked by contention for available resources.

TM

The Tuple Mover (TM) pool. You can set the MAXCONCURRENCY parameter for the TM pool to allow concurrent TM operations.

See Tuning tuple mover pool settings .

Built-in resource pools configuration

To view the current and default configuration for built-in resource pools, query the system tables RESOURCE_POOLS and RESOURCE_POOL_DEFAULTS, respectively. The sections below provide this information, and also indicate which built-in pool parameters can be modified with ALTER RESOURCE POOL :

- GENERAL
- BLOBDATA
- DBD
- JVM
- METADATA
- RECOVERY
- REFRESH
- SYSQUERY
- TM

GENERAL

Parameter	Settings
MEMORYSIZE	Empty / cannot be set

MAXMEMORYSIZE	The maximum memory to use for all resource pools, one of the following: `MAXMEMORYSIZE { 'integer%' | 'integer{K|M|G|T}' }` • *integer %* : Percentage of total system RAM, must be ≥ 25% **Caution** Setting this parameter to 100% generates a warning of potential swapping. • *integer* {K|M|G|T} : Amount of memory in kilobytes, megabytes, gigabytes, or terabytes, must be ≥ 1GB For example, if your node has 64GB of memory, setting MAXMEMORYSIZE to 50% allocates half of available memory. Thus, the maximum amount of memory available to all resource pools is 32GB. **Default:** 95%
MAXQUERYMEMORYSIZE	The maximum amount of memory allocated by this pool to process any query: `MAXQUERYMEMORYSIZE { 'integer%' | 'integer{K|M|G|T}' }` • *integer %* : Percentage of MAXMEMORYSIZE for this pool. • *integer* {K|M|G|T} : Amount of memory in kilobytes, megabytes, gigabytes, or terabytes
EXECUTIONPARALLELISM	**Default:** AUTO
PRIORITY	**Default:** 0
RUNTIMEPRIORITY	**Default:** Medium
RUNTIMEPRIORITYTHRESHOLD	**Default:** 2
QUEUETIMEOUT	**Default:** 00:05 (minutes)
RUNTIMECAP	Prevents runaway queries by setting the maximum time a query in the pool can execute. If a query exceeds this setting, it tries to cascade to a secondary pool: RUNTIMECAP { ' *interval* ' | NONE } • *interval* : An interval of 1 minute or 100 seconds; should not exceed one year. • NONE (default): No time limit on queries running in this pool.

PLANNEDCONCURRENCY	The number of concurrent queries you expect to run against the resource pool, an integer ≥ 4. If set to AUTO (default), Vertica automatically sets PLANNEDCONCURRENCY at query runtime, choosing the lower of these two values: • Number of cores • Memory/2GB Important In systems with a large number of cores, the default AUTO setting of PLANNEDCONCURRENCY is liable to be too low. In this case, set the parameter to the actual number of cores: ALTER RESOURCE POOL general PLANNEDCONCURRENCY *#cores* ; **Default:** AUTO
MAXCONCURRENCY	**Default:** Empty **Caution** Must be set ≥ 1, otherwise Vertica generates a warning that system queries might be unable to execute.
SINGLEINITIATOR	**Default:** False. Important Included for backwards compatibility. Do not change.
CPUAFFINITYSET	**Default:** Empty
CPUAFFINITYMODE	**Default:** ANY
CASCADETO	**Default:** Empty

BLOBDATA

Parameter	**Default Setting**
MEMORYSIZE	0%
MAXMEMORYSIZE	10

CPUAFFINITYSET	
CPUAFFINITYMODE	ANY / cannot be set
CASCADETO	Empty / cannot be set

DBD

Parameter	**Default Setting**
MEMORYSIZE	0%
MAXMEMORYSIZE	Unlimited
MAXQUERYMEMORYSIZE	Empty / cannot be set
EXECUTIONPARALLELISM	AUTO
PRIORITY	0
RUNTIMEPRIORITY	MEDIUM
RUNTIMEPRIORITYTHRESHOLD	0
QUEUETIMEOUT	0
RUNTIMECAP	NONE
PLANNEDCONCURRENCY	AUTO
MAXCONCURRENCY	NONE
SINGLEINITIATOR	True Important Included for backwards compatibility. Do not change.
CPUAFFINITYSET	Empty / cannot be set
CPUAFFINITYMODE	ANY / cannot be set
CASCADETO	Empty / cannot be set

JVM

Parameter	**Default Setting**
MEMORYSIZE	0%
MAXMEMORYSIZE	10% of memory or 2 GB, whichever is smaller
MAXQUERYMEMORYSIZE	Empty / cannot be set
EXECUTIONPARALLELISM	AUTO

PRIORITY	0
RUNTIMEPRIORITY	MEDIUM
RUNTIMEPRIORITYTHRESHOLD	2
QUEUETIMEOUT	00:05 (minutes)
RUNTIMECAP	NONE
PLANNEDCONCURRENCY	AUTO
MAXCONCURRENCY	Empty / cannot be set
SINGLEINITIATOR	FALSE Important Included for backwards compatibility. Do not change.
CPUAFFINITYSET	Empty / cannot be set
CPUAFFINITYMODE	ANY / cannot be set
CASCADETO	Empty / cannot be set

METADATA

Parameter	**Default Setting**
MEMORYSIZE	0%
MAXMEMORYSIZE	Unlimited
MAXQUERYMEMORYSIZE	Empty / cannot be set
EXECUTIONPARALLELISM	AUTO
PRIORITY	108
RUNTIMEPRIORITY	HIGH
RUNTIMEPRIORITYTHRESHOLD	0
QUEUETIMEOUT	0
RUNTIMECAP	NONE
PLANNEDCONCURRENCY	AUTO
MAXCONCURRENCY	0
SINGLEINITIATOR	FALSE. Important Included for backwards compatibility. Do not change.
CPUAFFINITYSET	Empty / cannot be set

CPUAFFINITYMODE	ANY / cannot be set
CASCADETO	Empty / cannot be set

RECOVERY

Parameter	Default Setting
MEMORYSIZE	0%
MAXMEMORYSIZE	The maximum size per node the resource pool can grow by borrowing memory from the GENERAL pool: MAXMEMORYSIZE { '*integer*%' | ' *integer* {K|M|G|T}' | NONE } • *integer* % : Percentage of total memory • *integer* {K|M|G|T} : Amount of memory in kilobytes, megabytes, gigabytes, or terabytes • NONE (default): Unlimited, pool can borrow any amount of available memory from the GENERAL pool. **Caution** Setting must resolve to ≥ 25%. Otherwise, Vertica generates a warning that system queries might be unable to execute.
MAXQUERYMEMORYSIZE	Empty / cannot be set
EXECUTIONPARALLELISM	AUTO
PRIORITY	One of the following: • Enterprise Mode: 107 • Eon Mode: 110 **Caution** Change these settings only under guidance from Vertica technical support.
RUNTIMEPRIORITY	MEDIUM
RUNTIMEPRIORITYTHRESHOLD	60
QUEUETIMEOUT	00:05 (minutes)
RUNTIMECAP	NONE
PLANNEDCONCURRENCY	AUTO

MAXCONCURRENCY	By default, set as follows: (*numberCores* / 2) + 1 Thus, given a system with four cores, MAXCONCURRENCY has a default setting of 3. **Note** 0 or NONE (unlimited) are invalid settings.
SINGLEINITIATOR	True. Important Included for backwards compatibility. Do not change.
CPUAFFINITYSET	Empty / cannot be set
CPUAFFINITYMODE	ANY / cannot be set
CASCADETO	Empty / cannot be set

REFRESH

Parameter	**Default Setting**
MEMORYSIZE	0%
MAXMEMORYSIZE	NONE (unlimited)
MAXQUERYMEMORYSIZE	Empty / cannot be set
EXECUTIONPARALLELISM	AUTO
PRIORITY	-10
RUNTIMEPRIORITY	MEDIUM
RUNTIMEPRIORITYTHRESHOLD	60
QUEUETIMEOUT	00:05 (minutes)
RUNTIMECAP	NONE (unlimited)
PLANNEDCONCURRENCY	AUTO (4)
MAXCONCURRENCY	3 This parameter must be set ≥ 1.

SINGLEINITIATOR	True. Important Included for backwards compatibility. Do not change.
CPUAFFINITYSET	Empty / cannot be set
CPUAFFINITYMODE	ANY / cannot be set
CASCADETO	Empty / cannot be set

SYSQUERY

Parameter	**Default Setting**
MEMORYSIZE	1G **Caution** Setting must resolve to ≥ 20M, otherwise Vertica generates a warning that system queries might be unable to execute, and diagnosing problems might be difficult.
MAXMEMORYSIZE	Empty (unlimited)
MAXQUERYMEMORYSIZE	Empty / cannot be set
EXECUTIONPARALLELISM	AUTO
PRIORITY	110
RUNTIMEPRIORITY	HIGH
RUNTIMEPRIORITYTHRESHOLD	0
QUEUETIMEOUT	00:05 (minutes)
RUNTIMECAP	NONE
PLANNEDCONCURRENCY	AUTO
MAXCONCURRENCY	Empty **Caution** Must be set ≥ 1, otherwise Vertica generates a warning that system queries might be unable to execute.
SINGLEINITIATOR	False. Important Included for backwards compatibility. Do not change.
CPUAFFINITYSET	Empty / cannot be set

CPUAFFINITYMODE	
CASCADETO	

TM

Parameter	Default Setting
MEMORYSIZE	5% (of the GENERAL pool's MAXMEMORYSIZE setting) + 2GB Important You can estimate the optimal amount of RAM for the TM resource pool as follows: *GbRAM* / (6 * *#table-cols*) > 10 where *#table-cols* is the number of columns in the largest database table. For example, given a 100-column table, MEMORYSIZE needs least 6GB of RAM: 6144MB / (6 * 100) = 10.24
MAXMEMORYSIZE	Unlimited
MAXQUERYMEMORYSIZE	Empty / cannot be set
EXECUTIONPARALLELISM	AUTO
PRIORITY	105
RUNTIMEPRIORITY	MEDIUM
RUNTIMEPRIORITYTHRESHOLD	60
QUEUETIMEOUT	00:05 (minutes)
RUNTIMECAP	NONE
PLANNEDCONCURRENCY	7
MAXCONCURRENCY	Sets across all nodes the maximum number of concurrent execution slots available to TM pool. In databases created in Vertica releases ≥9.3, the default value is 7. In databases created in earlier versions, the default is 3.This setting specifies the maximum number of merges that can occur simultaneously on multiple threads. **Note** 0 or NONE (unlimited) are invalid settings.
SINGLEINITIATOR	True Important Included for backwards compatibility. Do not change.
CPUAFFINITYSET	Empty / cannot be set
CPUAFFINITYMODE	ANY / cannot be set
CASCADETO	Empty / cannot be set

CREATE ROLE

Creates a role . After creating a role, use GRANT statements to specify role permissions.

Syntax

```
CREATE ROLE role
```

Parameters

role

The name for the new role, where *role* conforms to conventions described in Identifiers .

Privileges

Superuser

Examples

This example shows to create an empty role called roleA.

```
=> CREATE ROLE roleA;
CREATE ROLE
```

See also

- ALTER ROLE
- DROP ROLE

CREATE ROUTING RULE

Creates a load balancing routing rule that directs incoming client connections from an IP address range to a group of Vertica nodes. This group of Vertica nodes is defined by a load balance group. Once you create a routing rule, any client connection originating from the rule's IP address range is redirected to one of the nodes in the load balance group if the client opts into load balancing.

Syntax

```
CREATE ROUTING RULE rule_name ROUTE 'address_range' TO group_name
```

Arguments

rule_name ``

A name for the routing rule.

`address_range`

An IPv4 or IPv6 address range in CIDR format. Sets the address range of client connections that this rule applies to.

group_name

The name of the load balance group to handle the client connections from the address range. You create this group using the CREATE LOAD BALANCE GROUP statement.

Privileges

Superuser.

Examples

The following example creates a routing rule that routes all client connections from 192.168.1.0 to 192.168.1.255 to a load balance group named internal_clients:

```
=> CREATE ROUTING RULE internal_clients ROUTE '192.168.1.0/24' TO internal_clients;
CREATE ROUTING RULE
```

See also

CREATE SCHEMA

Defines a schema.

Syntax

```
CREATE SCHEMA [ IF NOT EXISTS ] [database.]schema
  [ AUTHORIZATION username]
  [ DEFAULT { INCLUDE | EXCLUDE } [ SCHEMA ] PRIVILEGES ]
```

Parameters

IF NOT EXISTS

If an object with the same name exists, do not create it and proceed. If you omit this option and the object exists, Vertica generates a ROLLBACK error message. In both cases, the object is not created if it already exists.
The IF NOT EXISTS clause is useful for SQL scripts where you want to create an object if it does not already exist.

For related information, see ON_ERROR_STOP .

[*database* .] *schema*

Identifies the schema to create, where *schema* conforms to conventions described in Identifiers . The following naming requirements also apply:

- The name must be unique among all other schema names in the database.
- It must comply with keyword restrictions .
- It cannot begin with v_ ; this prefix is reserved for Vertica system tables .
- If you specify a database, it must be the current database.

AUTHORIZATION *username*

Valid only for superusers, assigns ownership of the schema to another user. By default, the user who creates a schema is also assigned ownership.

After you create a schema, you can reassign ownership to another user with ALTER SCHEMA .

DEFAULT {INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES

Specifies whether to enable or disable default inheritance of privileges for new tables in the specified schema:

- EXCLUDE SCHEMA PRIVILEGES (default): Disables inheritance of schema privileges.
- INCLUDE SCHEMA PRIVILEGES : Specifies to grant tables in the specified schema the same privileges granted to that schema. This option has no effect on existing tables in the schema.

If you omit INCLUDE PRIVILEGES , you must explicitly grant schema privileges on the desired tables.

For more information see Enabling schema inheritance .

Privileges

- Superuser
- CREATE privilege for the database

Supported sub-statements

CREATE SCHEMA can include one or more sub-statements—for example, to create tables or projections within the new schema. Supported sub-statements include:

- CREATE TABLE / CREATE TEMPORARY TABLE
- GRANT statements
- CREATE PROJECTION
- CREATE SEQUENCE
- CREATE TEXT INDEX
- CREATE VIEW

CREATE SCHEMA statement and all sub-statements are treated as a single transaction. If any statement fails, Vertica rolls back the entire transaction. The owner of the new schema is assigned ownership of all objects that are created within this transaction.

For example, the following CREATE SCHEMA statement also grants privileges on the new schema, and creates a table and view of that table:

```
=> \c - Joan
You are now connected as user "Joan".
=> CREATE SCHEMA s1
    GRANT USAGE, CREATE ON SCHEMA s1 TO public
    CREATE TABLE s1.t1 (a varchar)
    CREATE VIEW s1.t1v AS SELECT * FROM s1.t1;
CREATE SCHEMA
=> \dtv s1.*
            List of tables
 Schema | Name | Kind  | Owner | Comment
--------+------+-------+-------+---------
 s1     | t1   | table | Joan  |
 s1     | t1v  | view  | Joan  |
(2 rows)
```

Examples

Create schema s1 :

```
=> CREATE SCHEMA s1;
```

Create schema s2 if it does not already exist:

```
=> CREATE SCHEMA IF NOT EXISTS s2;
```

If the schema already exists, Vertica returns a rollback message:

```
=> CREATE SCHEMA IF NOT EXISTS s2;
NOTICE 4214:  Object "s2" already exists; nothing was done
```

Create table t1 in schema s1 , then grant users Fred and Aniket access to all existing tables and all privileges on table t1 :

```
=> CREATE TABLE s1.t1 (c INT);
CREATE TABLE
=> GRANT USAGE ON SCHEMA s1 TO Fred, Aniket;
GRANT PRIVILEGE
=> GRANT ALL PRIVILEGES ON TABLE s1.t1 TO Fred, Aniket;
GRANT PRIVILEGE
```

Enable inheritance on new schema s3 so all tables created in it automatically inherit its privileges. In this case, new table s3.t2 inherits USAGE, CREATE, and SELECT privileges, which are automatically granted to all database users: => CREATE SCHEMA s3 DEFAULT INCLUDE SCHEMA PRIVILEGES; CREATE SCHEMA => GRANT USAGE, CREATE, SELECT, INSERT ON SCHEMA S3 TO PUBLIC; GRANT PRIVILEGE => CREATE TABLE s3.t2(i int); WARNING 6978: Table "t2" will include privileges from schema "s3" CREATE TABLE

- ALTER SCHEMA
- DROP SCHEMA

CREATE SEQUENCE

Defines a new named sequence number generator object. Like AUTO_INCREMENT and IDENTITY sequences , named sequences let you set the default values of primary key columns. Sequences guarantee uniqueness, and avoid constraint enforcement problems and overhead.

For more information about sequence types and their usage, see Sequences .

Syntax

```
CREATE SEQUENCE [ IF NOT EXISTS ] [[database.]schema.]sequence
  [ INCREMENT [ BY ] integer ]
  [ MINVALUE `*`integer`*` | NO MINVALUE ]
  [ MAXVALUE maxvalue | NO MAXVALUE ]
  [ START [ WITH ] integer ]
  [ CACHE integer | NO CACHE ]
  [ CYCLE | NO CYCLE ]
```

Parameters

IF NOT EXISTS

If an object with the same name exists, do not create it and proceed. If you omit this option and the object exists, Vertica generates a ROLLBACK error message. In both cases, the object is not created if it already exists.
The IF NOT EXISTS clause is useful for SQL scripts where you want to create an object if it does not already exist.

For related information, see ON_ERROR_STOP .

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** sequence ***

Identifies the sequence to create, where *sequence* conforms to conventions described in Identifiers . It must also be unique among all names of sequences, tables, projections, views, and models within the same schema.

INCREMENT [BY] *integer*

A positive or negative integer that specifies how much to increment or decrement the sequence on each call to NEXTVAL , by default set to 1.

> **Note**
> Setting this parameter to *integer* guarantees that column values always increment by at least *integer* . However, column values can sometimes increment by more than *integer* unless you also set the NO CACHE parameter.

MINVALUE *integer* | NO MINVALUE

Determines the minimum value a sequence can generate. If you omit this clause or specify NO MINVALUE (the default), default values are used: 1 and -2^{63} -1 for ascending and descending sequences, respectively.

MAXVALUE *integer* | NO MAXVALUE

Determines the maximum value for the sequence. If you omit this clause or specify NO MAXVALUE (the default), default values are used: 2^{63} -1 and -1 for ascending and descending sequences, respectively.

START [WITH] *integer*

Sets the sequence start value to *integer* . The next call to NEXTVAL returns *integer* . If you omit this clause, the sequence start value is set to MINVALUE for ascending sequences, and MAXVALUE for descending sequences.

CACHE *integer* | NO CACHE

Specifies whether to cache unique sequence numbers on each node for faster access. CACHE takes an integer argument as follows:

- >1 specifies how many unique numbers each node caches per session.

  > **Caution**
  > If sequence caching is set to a low number, nodes are liable to request a new set of cache values more frequently. While it supplies a new cache, Vertica must lock the catalog. Until Vertica releases the lock, other database activities such as table inserts are blocked, which can adversely affect overall performance.

- 0 or 1 specifies to disable caching (equivalent to NO CACHE).

If you omit this clause, the sequence cache is set to 250,000.
For details on named sequence caching, see Distributing named sequences .

CYCLE | NO CYCLE

Specifies whether the sequence can wrap when its minimum or maximum values are reached:

- CYCLE : The sequence wraps as follows:
  - When an incrementing sequence reaches its upper limit, it is reset to its minimum value.
  - When an decrementing sequence reaches its lower limit, it is reset to its maximum value.
- NO CYCLE (default): Calls to NEXTVAL return an error after the sequence reaches its maximum or minimum value.

Privileges

Non-superusers: CREATE privilege on the schema

Examples

See Creating and using named sequences .

See also

- ALTER SEQUENCE
- DROP SEQUENCE

CREATE SUBNET

Identifies the subnet to which the nodes of a Vertica database belong. Use this statement to configure import/export from a database to other Vertica clusters.

Syntax

```
CREATE SUBNET subnet-name WITH 'subnet-prefix'
```

Parameters

subnet-name

A name you assign to the subnet, where *subnet-name* conforms to conventions described in Identifiers .

subnet-prefix

The subnet prefix in either a dotted-quad number format for IPv4 addresses, or four colon-delimited four-digit hexadecimal numbers for IPv6 addresses. Refer to system table NETWORK_INTERFACES to get the prefix of all available IP networks.

You can then configure the database to use the subnet for import/export. For details, see Identify the database or nodes used for import/export .

Privileges

Superuser

Examples

```
=> CREATE SUBNET mySubnet WITH '123.4.5.6';
=> CREATE SUBNET mysubnet WITH 'fd9b:1fcc:1dc4:78d3::';
```

CREATE TABLE

Creates a table in the logical schema.

Syntax

Create with column definitions:

```
CREATE TABLE [ IF NOT EXISTS ] [[database.]schema.]table
  ( column-definition[,...] [, table-constraint ][,...] )
  [ ORDER BY column[,...] ]
  [ segmentation-spec ]
  [ KSAFE [k-num] ]
  [ partition-clause]
  [ {INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES ]
```

Create from another table:

```
CREATE TABLE [ IF NOT EXISTS ] [[database.]schema.]table { AS-clause | LIKE-clause }
```

AS-clause

```
[ ( column-name-list ) ]
[ {INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES ]
AS  [ /*+ LABEL */ ] [ AT epoch ] query [ ENCODED BY column-ref-list ] [ segmentation-spec ]
```

LIKE-clause

```
LIKE [[database.]schema.]existing-table
  [ {INCLUDING | EXCLUDING} PROJECTIONS ]
  [ {INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES ]
```

Parameters

IF NOT EXISTS

If an object with the same name exists, do not create it and proceed. If you omit this option and the object exists, Vertica generates a ROLLBACK error message. In both cases, the object is not created if it already exists.
The IF NOT EXISTS clause is useful for SQL scripts where you want to create an object if it does not already exist.

For related information, see ON_ERROR_STOP .

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

table

Name of the table to create, which must be unique among names of all sequences, tables, projections, views, and models within the schema.

column-definition

Column name, data type , and optional constraints. A table can have up to 9800 columns. At least one column in the table must be of a scalar type or native array.

table-constraint

Table-level constraint, as opposed to column constraints.

ORDER BY *column* [,...]

Invalid for external tables, specifies columns from the SELECT list on which to sort the superprojection that is automatically created for this table. The ORDER BY clause cannot include qualifiers ASC or DESC . Vertica always stores projection data in ascending sort order.
If you omit the ORDER BY clause, Vertica uses the SELECT list order as the projection sort order.

segmentation-spec

Invalid for external tables, specifies how to distribute data for auto-projections of this table. Supply one of the following clauses:

- *hash-segmentation-clause* : Specifies to segment data evenly and distribute across cluster nodes. Vertica recommends segmenting large tables.
- *unsegmented-clause* : Specifies to create an unsegmented projection.

If this clause is omitted, Vertica generates auto-projections with default hash segmentation .

KSAFE [*k-num*]

Invalid for external tables, specifies K-safety of auto-projections created for this table, where *k-num* must be equal to or greater than system K-safety. If you omit this option, the projection uses the system K-safety level.

partition-clause

Invalid for external tables, logically divides table data storage through a PARTITION BY clause:

```
PARTITION BY partition-expression
 [ GROUP BY group-expression ] [ ACTIVEPARTITIONCOUNT integer ]
```

column-name-list

Valid only when creating a table from a query (AS *query*), defines column names that map to the query output. If you omit this list, Vertica uses the query output column names. The names in *column-name-list* and queried columns must be the same in number.
For example:

```
CREATE TABLE customer_occupations (name, profession)
  AS SELECT customer_name, occupation FROM customer_dimension;
```

This clause and the ENCODED BY clause are mutually exclusive. Column name lists are invalid for external tables

{INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES

Default inheritance of schema privileges for this table:

- INCLUDE PRIVILEGES specifies that the table inherits privileges that are set on its schema. This is the default behavior if privileges inheritance is enabled for the schema.
- EXCLUDE PRIVILEGES disables inheritance of privileges from the schema.

For details, see Inherited privileges .

AS *query*

Creates and loads a table from the results of a query , specified as follows:

```
AS [ /*+ LABEL */ ] [ AT epoch ] query
```

The query cannot include complex type columns.

ENCODED BY *column-ref-list*

A comma-delimited list of columns from the source table, where each column is qualified by one or both of the following encoding options:

- ACCESSRANK *integer* : Overrides the default access rank for a column, useful for prioritizing access to a column. See Prioritizing column access speed .
- ENCODING *encoding-type* : Specifies the type of encoding to use on the column. The default encoding type is AUTO .

This option and *column-name-list* are mutually exclusive. This option is invalid for external tables.

LIKE *existing-table*

Creates the table by replicating an existing table . You can qualify the LIKE clause with one of the following options:

- EXCLUDING PROJECTIONS (default): Do not copy projections from the source table.
- INCLUDING PROJECTIONS : Copy current projections from the source table for the new table.
- {INCLUDE|EXCLUDE} [SCHEMA] PRIVILEGES : See description above).

Privileges

Non-superuser:

- CREATE privileges on the table schema
- If creating a table that includes a named sequence:
  - SELECT privilege on sequence object
  - USAGE privilege on sequence schema
- If creating a table with the LIKE clause, source table owner

Restrictions for complex types

Complex types used in native tables have some restrictions, in addition to the restrictions for individual types listed on their reference pages:

- A native table must have at least one column that is a primitive type or a native array (one-dimensional array of a primitive type). If a flex table has real columns, it must also have at least one column satisfying this restriction.
- Complex type columns cannot be used in ORDER BY or PARTITION BY clauses nor as FILLER columns.
- Complex type columns cannot have constraints .
- Expressions returning complex types cannot be used as projection columns, and projections cannot be segmented or ordered by columns of complex types.
- Tables with columns of complex types cannot use DEFAULT and SET USING.

Examples

The following example creates a table in the public schema:

```
CREATE TABLE public.Premium_Customer
(
   ID IDENTITY ,
   lname varchar(25),
   fname varchar(25),
   store_membership_card int
);
```

The following example uses LIKE to create a new table from this one:

```
=> CREATE TABLE All_Customers LIKE Premium_Customer;
CREATE TABLE
```

The following example selects columns from one table to use in a new table, using an AS clause:

```
=> CREATE TABLE cust_basic_profile AS SELECT
    customer_key, customer_gender, customer_age, marital_status, annual_income, occupation
    FROM customer_dimension WHERE customer_age>18 AND customer_gender !='';
CREATE TABLE
=> SELECT customer_age, annual_income, occupation FROM cust_basic_profile
    WHERE customer_age > 23 ORDER BY customer_age;
 customer_age | annual_income |     occupation
--------------+---------------+--------------------
           24 |        469210 | Hairdresser
           24 |        140833 | Butler
           24 |        558867 | Lumberjack
           24 |        529117 | Mechanic
           24 |        322062 | Acrobat
           24 |        213734 | Writer
           ...
```

The following example creates a table using array columns:

```
=> CREATE TABLE orders(
   orderkey    INT,
   custkey     INT,
   prodkey     ARRAY[VARCHAR(10)],
   orderprices ARRAY[DECIMAL(12,2)],
   orderdate   DATE
);
```

The following example uses a ROW complex type:

```
=> CREATE TABLE inventory
   (store INT, products ROW(name VARCHAR, code VARCHAR));
```

- Column-definition
- Column-name-list
- Partition clause
- Table-constraint

Column-constraint

Adds a constraint to a column's metadata. For details, see Constraints .

Syntax

```
[ { AUTO_INCREMENT | IDENTITY } [ (args) ] ]
[ CONSTRAINT constraint-name ] {
  [ CHECK (expression) [ ENABLED | DISABLED ] ]
  [ [ DEFAULT expression ] [ SET USING expression ] | DEFAULT USING expression ]
  [ NULL | NOT NULL ]
  [ { PRIMARY KEY [ ENABLED | DISABLED ] REFERENCES table [( column )] } ]
  [ UNIQUE [ ENABLED | DISABLED ] ]
}
```

Parameters

> **Note**

You can specify enforcement of several constraints by qualifying them with the keywords ENABLED or DISABLED . See Enforcing Constraints below.

AUTO_INCREMENT | IDENTITY

Creates a table column whose values are automatically generated by and managed by the database. You cannot change or load values in this column. You can set this constraint on only one table column.

AUTO_INCREMENT and IDENTITY are synonyms. For details on this constraint and optional arguments, see AUTO_INCREMENT and IDENTITY sequences .
These options are invalid for temporary tables.

CONSTRAINT *constraint-name*

Assigns a name to the constraint, valid for the following constraints:

- PRIMARY KEY
- REFERENCES (foreign key)
- CHECK
- UNIQUE

If you omit assigning a name to these constraints, Vertica assigns its own name. For details, see Naming constraints .
Vertica recommends that you name all constraints.

CHECK (*expression*)

Adds check condition *expression* , which returns a Boolean value.

DEFAULT

Specifies this column's default value:

```
DEFAULT default-expr
```

Vertica evaluates the DEFAULT expression and sets the column on load operations, if the operation omits a value for the column. For details about valid expressions, see Defining column values .

SET USING

Specifies to set values in this column from the specified expression:

```
SET USING using-expr
```

Vertica evaluates the SET USING expression and refreshes column values only when the function REFRESH_COLUMNS is invoked. For details about valid expressions, see Defining column values .

DEFAULT USING

Defines the column with DEFAULT and SET USING constraints, specifying the same expression for both. DEFAULT USING columns support the same expressions as SET USING columns, and are subject to the same restrictions .

NULL | NOT NULL

Specifies whether the column can contain null values:

- NULL : Allows null values in the column. If you set this constraint on a primary key column, Vertica ignores it and sets it to NOT NULL .
- NOT NULL : Specifies that the column must be set to a value during insert and update operations. If the column has no default value and no value is provided, INSERT or UPDATE returns an error.

If you omit this constraint, the default is NULL for all columns except primary key columns, which Vertica always sets to NOT NULL .
External tables: If you specify NOT NULL and the column contains null values, queries are liable to return errors or generate unexpected behavior. Specify NOT NULL for an external table column only if you are sure that the column does not contain nulls.

PRIMARY KEY

Identifies this column as the table's primary key.

REFERENCES

Identifies this column as a foreign key:

```
REFERENCES table [column]
```

where *column* is the primary key in *table* . If you omit *column* , Vertica references the primary key in *table* .

UNIQUE

Requires column data to be unique with respect to all table rows.

Privileges

Table owner or user WITH GRANT OPTION is grantor.

- REFERENCES privilege on table to create foreign key constraints that reference this table
- USAGE privilege on schema that contains the table

Enforcing constraints

The following constraints can be qualified with the keyword ENABLED or DISABLED :

- PRIMARY KEY
- UNIQUE
- CHECK

If you omit ENABLED or DISABLED , Vertica determines whether to enable the constraint automatically by checking the appropriate configuration parameter:

- EnableNewPrimaryKeysByDefault
- EnableNewUniqueKeysByDefault
- EnableNewCheckConstraintsByDefault

For details, see Constraint enforcement .

Column-definition

Specifies the name, data type, and constraints to be applied to a column.

Syntax

```
column-name data-type
  [ column-constraint ][...]
  [ ENCODING encoding-type ]
  [ ACCESSRANK integer ]
```

Parameters

*** column-name ***

The name of a column to be created or added.

*** data-type ***

A Vertica-supported data type .

> **Tip**
> When specifying the maximum column width in a CREATE TABLE statement, use the width in bytes (octets) for any of the string types. Each UTF-8 character might require four bytes, but European languages generally require a little over one byte per character, while Oriental languages generally require a little under three bytes per character.

column-constraint

A constraint type that Vertica supports—for example, NOT NULL or UNIQUE . For general information, see Constraints .

ENCODING

encoding-type

The column encoding type , by default set to AUTO.

ACCESSRANK *integer*

Overrides the default access rank for a column. Use this parameter to increase or decrease the speed at which Vertica accesses a column. For more information, see Overriding Default Column Ranking .

Examples

The following example creates a table named Employee_Dimension and its associated superprojection in the public schema. The Employee_key column is designated as a primary key, and RLE encoding is specified for the Employee_gender column definition:

```
=> CREATE TABLE public.Employee_Dimension (
   Employee_key              integer PRIMARY KEY NOT NULL,
   Employee_gender           varchar(8) ENCODING RLE,
   Courtesy_title            varchar(8),
   Employee_first_name       varchar(64),
   Employee_middle_initial   varchar(8),
   Employee_last_name        varchar(64)
);
```

Column-name-list

Used to rename columns when creating a table or temporary table from a query ; also used to specify the column's encoding type and access rank .

Syntax

```
column-name-list
   [ ENCODING encoding-type ]
   [ ACCESSRANK integer ]
   [ GROUPED ( column-reference[,...] ) ]
```

Parameters

column-name

Specifies the new name for the column.

ENCODING *encoding-type*

Specifies the type of encoding to use on the column. The default encoding type is AUTO .

ACCESSRANK *integer*

Overrides the default access rank for a column, useful for prioritizing access to a column. See Prioritizing column access speed .

GROUPED

Groups two or more columns . For detailed information, see GROUPED clause .

Requirements

- A column in the list can not specify the column's data type or any constraint. These are derived from the queried table.
- If the query output has expressions other than simple columns (for example, constants or functions) then an alias must be specified for that expression, or the column name list must include all queried columns.
- CREATE TABLE can specify encoding types and access ranks in the column name list or the query's ENCODED BY clause, but not in both. For example, the following CREATE TABLE statement sets encoding and access rank on two columns in the column name list:

  ```
  => CREATE TABLE promo1 (state ENCODING RLE ACCESSRANK 1, zip ENCODING RLE,...)
     AS SELECT * FROM customer_dimension ORDER BY customer_state;
  ```

  The next statement specifies the same encoding and access rank in the query's ENCODED BY clause.

  ```
  => CREATE TABLE promo2
     AS SELECT * FROM customer_dimension ORDER BY customer_state
     ENCODED BY customer_state ENCODING RLE ACCESSRANK 1, customer_zip ENCODING RLE;
  ```

Partition clause

Specifies partitioning of table data, through a PARTITION BY clause in the table definition:

```
PARTITION BY partition-expression [ GROUP BY group-expression ] [ active-partition-count-expr ]
```

PARTITION BY *partition-expression*

For each table row, resolves to a partition key that is derived from one or more table columns.

> **Caution**
> Avoid partitioning tables on LONG VARBINARY and LONG VARCHAR columns. Doing so can adversely impact performance.

GROUP BY *group-expression*

For each table row, resolves to a partition group key that is derived from the partition key. Vertica uses group keys to merge partitions into separate partition groups. GROUP BY must use the same expression as PARTITION BY. For example:

```
...PARTITION BY (i+j) GROUP BY (
   CASE WHEN (i+j) < 5 THEN 1
      WHEN (i+j) < 10 THEN 2
      ELSE 3);
```

For details on partitioning table data by groups, see Partition grouping and Hierarchical partitioning .

active-partition-count-expr

Specifies how many partitions are active for this table, specified as follows:

- In partition clause of CREATE TABLE:
  ```
  ACTIVEPARTITIONCOUNT integer
  ```
- In partition clause of ALTER TABLE:
  ```
  SET ACTIVEPARTITIONCOUNT integer
  ```

This setting supersedes configuration parameter ActivePartitionCount . For details on usage, see Active and inactive partitions .

Partitioning requirements and restrictions

PARTITION BY expressions can specify leaf expressions, functions, and operators. The following requirements and restrictions apply:

- All table projections must include all columns referenced in the expression; otherwise, Vertica cannot resolve the expression.
- The expression can reference multiple columns, but it must resolve to a single non-null value for each row.

> **Note**
> You can avoid null-related errors with the function ZEROIFNULL . This function can check a PARTITION BY expression for null values and evaluate them to 0. For example: CREATE TABLE t1 (a int, b int) PARTITION BY (ZEROIFNULL(a)); CREATE TABLE

- All leaf expressions must be constants or table columns.
- All other expressions must be functions and operators. The following restrictions apply to functions: * They must be immutable —that is, they return the same value regardless of time and locale and other session- or environment-specific conditions. * They cannot be aggregate functions . * They cannot be Vertica meta-functions .
- The expression cannot include queries.
- The expression cannot include user-defined data types such as Geometry .

GROUP BY expressions do not support modulo (%) operations.

Examples

The following statements create the store_orders table and load data into it. The CREATE TABLE statement includes a simple partition clause that specifies to partition data by year:

```
=> CREATE TABLE public.store_orders
(
   order_no int,
   order_date timestamp NOT NULL,
   shipper varchar(20),
   ship_date date
)
UNSEGMENTED ALL NODES
PARTITION BY YEAR(order_date);
CREATE TABLE
=> COPY store_orders FROM '/home/dbadmin/export_store_orders_data.txt';
41834
```

As COPY loads the new table data into ROS storage, the Tuple Mover executes the table's partition clause by dividing orders for each year into separate partitions, and consolidating these partitions in ROS containers.

In this case, the Tuple Mover creates four partition keys for the loaded data—2017, 2016, 2015, and 2014—and divides the data into separate ROS containers accordingly:

```
=> SELECT dump_table_partition_keys('store_orders');
... Partition keys on node v_vmart_node0001
  Projection 'store_orders_super'
   Storage [ROS container]
     No of partition keys: 1
     Partition keys: 2017
   Storage [ROS container]
     No of partition keys: 1
     Partition keys: 2016
   Storage [ROS container]
     No of partition keys: 1
     Partition keys: 2015
   Storage [ROS container]
     No of partition keys: 1
     Partition keys: 2014

 Partition keys on node v_vmart_node0002
  Projection 'store_orders_super'
   Storage [ROS container]
     No of partition keys: 1
     Partition keys: 2017
...

(1 row)
```

As new data is loaded into store_orders , the Tuple Mover merges it into the appropriate partitions, creating partition keys as needed for new years.

Partitioning tables

Table-constraint

Table-constraint

Adds a constraint to table metadata. You can specify table constraints with CREATE TABLE , or add a constraint to an existing table with ALTER TABLE . For details, see Setting constraints .

> **Note**
> Adding a constraint to a table that is referenced in a view does not affect the view.

Syntax

```
[ CONSTRAINT constraint-name ]
{
... PRIMARY KEY (column[,... ]) [ ENABLED | DISABLED ]
... | FOREIGN KEY (column[,... ] ) REFERENCES table [ (column[,...]) ]
... | UNIQUE (column[,...]) [ ENABLED | DISABLED ]
... | CHECK (expression) [ ENABLED | DISABLED ]
}
```

Parameters

CONSTRAINT *constraint-name*

Assigns a name to the constraint. Vertica recommends that you name all constraints.

PRIMARY KEY

Defines one or more NOT NULL columns as the primary key as follows:

```
PRIMARY KEY (column[,...]) [ ENABLED | DISABLED]
```

You can qualify this constraint with the keyword ENABLED or DISABLED . See Enforcing Constraints below.

If you do not name a primary key constraint, Vertica assigns the name C_PRIMARY .

FOREIGN KEY

Adds a referential integrity constraint defining one or more columns as foreign keys as follows:

```
FOREIGN KEY (column[,... ]) REFERENCES table [(column[,... ])]
```

If you omit *column* , Vertica references the primary key in *table* .
If you do not name a foreign key constraint, Vertica assigns the name C_FOREIGN .

Important
Adding a foreign key constraint requires the following privileges (in addition to privileges also required by ALTER TABLE):

- REFERENCES on the referenced table
- USAGE on the schema of the referenced table

UNIQUE

Specifies that the data in a column or group of columns is unique with respect to all table rows, as follows:

```
UNIQUE (column[,...]) [ENABLED | DISABLED]
```

You can qualify this constraint with the keyword ENABLED or DISABLED . See Enforcing Constraints below.
If you do not name a unique constraint, Vertica assigns the name C_UNIQUE .

CHECK

Specifies a check condition as an expression that returns a Boolean value, as follows:

```
CHECK (expression) [ENABLED | DISABLED]
```

You can qualify this constraint with the keyword ENABLED or DISABLED . See Enforcing Constraints below.
If you do not name a check constraint, Vertica assigns the name C_CHECK .

Privileges

Non-superusers: table owner, or the following privileges:

- USAGE on schema
- ALTER on table
- SELECT on table to enable or disable constraint enforcement

Enforcing constraints

A table can specify whether Vertica automatically enforces a primary key, unique key or check constraint with the keyword ENABLED or DISABLED . If you omit ENABLED or DISABLED , Vertica determines whether to enable the constraint automatically by checking the appropriate configuration parameter:

- EnableNewPrimaryKeysByDefault
- EnableNewUniqueKeysByDefault
- EnableNewCheckConstraintsByDefault

For details, see Constraint enforcement .

Examples

The following example creates a table (t01) with a primary key constraint.

```
CREATE TABLE t01 (id int CONSTRAINT sampleconstraint PRIMARY KEY);
CREATE TABLE
```

This example creates the same table without the constraint, and then adds the constraint with ALTER TABLE ADD CONSTRAINT

```
CREATE TABLE t01 (id int);
CREATE TABLE

ALTER TABLE t01 ADD CONSTRAINT sampleconstraint PRIMARY KEY(id);
WARNING 2623:  Column "id" definition changed to NOT NULL
ALTER TABLE
```

The following example creates a table (addapk) with two columns, adds a third column to the table, and then adds a primary key constraint on the third column.

```
=> CREATE TABLE addapk (col1 INT, col2 INT);
CREATE TABLE

=> ALTER TABLE addapk ADD COLUMN col3 INT;
ALTER TABLE

=> ALTER TABLE addapk ADD CONSTRAINT col3constraint PRIMARY KEY (col3) ENABLED;
WARNING 2623:  Column "col3" definition changed to NOT NULL
ALTER TABLE
```

Using the sample table addapk , check that the primary key constraint is enabled (is_enabled is t).

```
=> SELECT constraint_name, column_name, constraint_type, is_enabled FROM PRIMARY_KEYS WHERE table_name IN ('addapk');

 constraint_name | column_name | constraint_type | is_enabled
-----------------+-------------+-----------------+------------
 col3constraint  | col3        | p               | t
(1 row)
```

This example disables the constraint using ALTER TABLE ALTER CONSTRAINT .

```
=> ALTER TABLE addapk ALTER CONSTRAINT col3constraint DISABLED;
```

Check that the primary key is now disabled (is_enabled is f).

```
=> SELECT constraint_name, column_name, constraint_type, is_enabled FROM PRIMARY_KEYS WHERE table_name IN ('addapk');

 constraint_name | column_name | constraint_type | is_enabled
-----------------+-------------+-----------------+------------
 col3constraint  | col3        | p               | f
(1 row)
```

For a general discussion of constraints, see Constraints . For additional examples of creating and naming constraints, see Naming constraints .

CREATE TEMPORARY TABLE

Creates a table whose data persists only during the current session. Temporary table data is not visible to other sessions.

Syntax

Create with column definitions:

```
CREATE [ scope ] TEMP[ORARY] TABLE [ IF NOT EXISTS ] [[database.]schema.]table-name
  ( column-definition[,...] )
  [ table-constraint ]
  [ ON COMMIT { DELETE | PRESERVE } ROWS ]
  [ NO PROJECTION ]
  [ ORDER BY table-column[,...] ]
  [ segmentation-spec ]
  [ KSAFE [k-num] ]
  [ {INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES ]
```

Create from another table:

```
CREATE TEMP[ORARY] TABLE [ IF NOT EXISTS ] [[database.]schema.]table-name
  [ ( column-name-list ) ]
  [ ON COMMIT { DELETE | PRESERVE } ROWS ]
AS  [ /*+ LABEL */ ] [ AT epoch ] query [ ENCODED BY column-ref-list ]
```

Parameters

scope

Specifies visibility of the table definition:

- GLOBAL : The table definition is visible to all sessions, and persists until you explicitly drop the table.
- LOCAL : the table definition is visible only to the session in which it is created, and is dropped when the session ends.

If no scope is specified, Vertica uses the default that is set by configuration parameter DefaultTempTableLocal .
Regardless of this setting, retention of temporary table data is set by the keywords ON COMMIT DELETE and ON COMMIT PRESERVE (see below).

For more information, see Creating temporary tables .

IF NOT EXISTS

If an object with the same name exists, do not create it and proceed. If you omit this option and the object exists, Vertica generates a ROLLBACK error message. In both cases, the object is not created if it already exists.
The IF NOT EXISTS clause is useful for SQL scripts where you want to create an object if it does not already exist.

For related information, see ON_ERROR_STOP .

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.
If you do not specify a schema, the table is created in the default schema.

*** table-name ***

Identifies the table to create, where *table-name* conforms to conventions described in Identifiers . It must also be unique among all names of sequences, tables, projections, views, and models within the same schema.

column-definition

Defines a table column. A table can have up to 9800 columns.

table-constraint

Adds a constraint to table metadata.

ON COMMIT

Specifies whether data is transaction- or session-scoped:

```
ON COMMIT {PRESERVE | DELETE} ROWS
```

- DELETE (default) marks the temporary table for transaction-scoped data. Vertica removes all table data after each commit.
- PRESERVE marks the temporary table for session-scoped data, which is preserved beyond the lifetime of a single transaction. Vertica removes all table data when the session ends.

NO PROJECTION

Prevents Vertica from creating auto-projections for this table. A superprojection is created only when data is explicitly loaded into this table.

NO PROJECTION is invalid with the following clauses:

- ORDER BY
- KSAFE
- Any segmentation clause (*hash-segmentation-clause* or *unsegmented-clause*).

{INCLUDE | EXCLUDE} [SCHEMA] PRIVILEGES

Default inheritance of schema privileges for this table:

- INCLUDE PRIVILEGES specifies that the table inherits privileges that are set on its schema. This is the default behavior if privileges inheritance is enabled for the schema.
- EXCLUDE PRIVILEGES disables inheritance of privileges from the schema.

For details, see Inherited privileges .

ORDER BY *table-column* [,...]

Invalid for external tables, specifies columns from the SELECT list on which to sort the superprojection that is automatically created for this table. The ORDER BY clause cannot include qualifiers ASC or DESC . Vertica always stores projection data in ascending sort order.
If you omit the ORDER BY clause, Vertica uses the SELECT list order as the projection sort order.

segmentation-spec

Invalid for external tables, specifies how to distribute data for auto-projections of this table. Supply one of the following clauses:

- *hash-segmentation-clause* : Specifies to segment data evenly and distribute across cluster nodes. Vertica recommends segmenting large tables.
- *unsegmented-clause* : Specifies to create an unsegmented projection.

If this clause is omitted, Vertica generates auto-projections with default hash segmentation .

KSAFE [*k-num*]

Invalid for external tables, specifies K-safety of auto-projections created for this table, where *k-num* must be equal to or greater than system K-safety. If you omit this option, the projection uses the system K-safety level.
Eon Mode: K-safety of temporary tables is always set to 0, regardless of system K-safety. If a CREATE TEMPORARY TABLE statement sets *k-num* greater than 0, Vertica returns an warning.

column-name-list

Valid only when creating a table from a query (AS *query*), defines column names that map to the query output. If you omit this list, Vertica uses the query output column names. The names in *column-name-list* and queried columns must be the same in number.
For example:

```
CREATE TABLE customer_occupations (name, profession)
  AS SELECT customer_name, occupation FROM customer_dimension;
```

This clause and the ENCODED BY clause are mutually exclusive. Column name lists are invalid for external tables

AS *query*

Creates and loads a table from the results of a query , specified as follows:

```
AS  [ /*+ LABEL */ ] [ AT epoch ] query
```

The query cannot include complex type columns.

ENCODED BY *column-ref-list*

A comma-delimited list of columns from the source table, where each column is qualified by one or both of the following encoding options:
- ACCESSRANK *integer* : Overrides the default access rank for a column, useful for prioritizing access to a column. See Prioritizing column access speed .
- ENCODING *encoding-type* : Specifies the type of encoding to use on the column. The default encoding type is AUTO .

This option and *column-name-list* are mutually exclusive. This option is invalid for external tables.

Privileges

The following privileges are required:

- CREATE privileges on the table schema
- If creating a temporary table that includes a named sequence:
  - SELECT privilege on sequence object
  - USAGE privilege on sequence schema

Restrictions

- Queries on temporary tables are subject to the same restrictions on SQL support as persistent tables.
- You cannot add projections to non-empty, global temporary tables (ON COMMIT PRESERVE ROWS). Make sure that projections exist before you load data. See Auto-projections .
- While you can add projections for temporary tables that are defined with ON COMMIT DELETE ROWS specified, be aware that you might lose all data.
- Mergeout operations cannot be used on session-scoped temporary data.
- In general, session-scoped temporary table data is not visible using system (virtual) tables.
- Temporary tables do not recover. If a node fails, queries that use the temporary table also fail. Restart the session and populate the temporary table.

Examples

See Creating temporary tables .

See also

- ALTER TABLE

- CREATE TABLE

CREATE TEXT INDEX

Creates a text index used to perform text searches. If data within a table is partitioned, then an extra column appears in the text index, showing the partition.

Syntax

```
CREATE TEXT INDEX [[database.]schema.]txtindex-name
 ON [schema.]source-table (unique-id, text-field [, column-name,...])
[STEMMER {stemmer-name(stemmer-input-data-type)| NONE}]
[TOKENIZER tokenizer-name(tokenizer-input-data-type)];
```

Parameters

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.
If you do not specify a schema, the table is created in the default schema.

*** txtindex-name ***

The text index name.

*** source-table ***

The source table to index.

*** unique-id ***

The name of the column in the source table that contains a unique identifier. Any data type is permissible. The column must be the primary key in the source table.

*** text-field ***

The name of the column in the source table that contains the text field. Valid data types are:

- CHAR
- VARCHAR
- LONG VARCHAR
- VARBINARY
- LONG VARBINARY

Nulls are allowed.

*** column-name ***

The name of a column or columns to be included as additional columns.

*** stemmer-name ***

The name of the stemmer.

*** stemmer-input-data-type ***

The input data type of the *stemmer-name* function.

*** tokenizer-name ***

Specifies the name of the tokenizer.

*** tokenizer-input-data-type ***

This value is the input data type of the *tokenizer-name* function. It can accept any number of arguments.

If a Vertica tokenizers is used, then this parameter can be omitted.

Privileges

The index automatically inherits the query permissions of its parent table. The table owner and dbadmin will be allowed to create and/or modify the indices.

Important

Do not alter the contents or definitions of the text index. If the contents or definitions of the text index are altered, then the results will not appropriately match the source table.

Requirements

- Requires there be a column with a unique identifier set as the primary key.

- The source table must have an associated projection, and must be both sorted and segmented by the primary key.

Examples

The following example shows how to create a text index with an additional unindexed column on the table t_log using the CREATE TEXT INDEX statement:

```
=> CREATE TEXT INDEX t_log_index ON t_log (id, text, day_of_week);
CREATE INDEX
=> SELECT * FROM t_log_index;
       token          | doc_id | day_of_week
----------------------+--------+-------------
'catalog               |      1 | Monday
'dbadmin'              |      2 | Monday
2014-06-04             |      1 | Monday
2014-06-04             |      2 | Monday
2014-06-04             |      3 | Monday
2014-06-04             |      4 | Monday
2014-06-04             |      5 | Monday
2014-06-04             |      6 | Monday
2014-06-04             |      7 | Monday
2014-06-04             |      8 | Monday
45035996273704966      |      3 | Tuesday
45035996273704968      |      4 | Tuesday
<INFO>                 |      1 | Tuesday
<INFO>                 |      6 | Tuesday
<INFO>                 |      7 | Tuesday
<INFO>                 |      8 | Tuesday
<WARNING>              |      2 | Tuesday
<WARNING>              |      3 | Tuesday
<WARNING>              |      4 | Tuesday
<WARNING>              |      5 | Tuesday

...

(97 rows)
```

The following example shows a text index, tpart_index, created from a partitioned source table:

```
=> SELECT * FROM tpart_index;
        token          | doc_id | partition
-----------------------+--------+-----------
 0                     |      4 |      2014
 0                     |      5 |      2014
 11:00:49.568          |      4 |      2014
 11:00:49.568          |      5 |      2014
 11:00:49.569          |      6 |      2014
 <INFO>                |      6 |      2014
 <WARNING>             |      4 |      2014
 <WARNING>             |      5 |      2014
 Database              |      6 |      2014
 Execute:              |      6 |      2014
 Object                |      4 |      2014
 Object                |      5 |      2014
 [Catalog]             |      4 |      2014
 [Catalog]             |      5 |      2014
 'catalog              |      1 |      2013
 'dbadmin'             |      2 |      2013
 0                     |      3 |      2013
 11:00:49.568          |      1 |      2013
 11:00:49.568          |      2 |      2013
 11:00:49.568          |      3 |      2013

- DROP TEXT INDEX

CREATE USER

Adds a name to the list of authorized database users.

> **Note**
> New users lack default access to schema PUBLIC. Be sure to grant new users USAGE privileges on the PUBLIC schema .

Syntax

```
CREATE USER user-name [ account-parameter value[,...] ]
```

Parameters

user-name

Name of the new user, where *user-name* conforms to conventions described in Identifiers .

account-parameter value

One or more user account parameter settings (see below).

User account parameters

Specify one or more user account parameters as a comma-delimited list:

```
account-parameter setting[,...]
```

Parameter	Settings

ACCOUNT	Locks or unlocks user access to the database, one of the following: • UNLOCK (default) • LOCK prevents a new user from logging in. This can be useful when creating an account for a user who does not need immediate access. **Tip** To automate account locking, set a maximum number of failed login attempts with CREATE PROFILE .
GRACEPERIOD	Specifies how long a user query can block on any session socket, one of the following: • NONE (default): Removes any grace period previously set on session queries. • ' *interval* ' : Specifies as an interval the maximum grace period for current session queries, up to 20 days. For details, see Handling session socket blocking .
IDENTIFIED BY	Sets the user's password as follows: IDENTIFIED BY { '[*password*]' | ' *hashed-password* ' SALT ' *hash-salt* ' } • *password* : ASCII password that Vertica then hashes for internal storage. An empty string enables this user to access the database with no password. • *hashed-password* : A pre-hashed password and its associated hex string *hash-salt* . Setting a password this way bypasses all password complexity requirements . Important If you omit this parameter, this user can access the database with no password. For details, see Password guidelines and Creating a database name and password .
IDLESESSIONTIMEOUT	The length of time the system waits before disconnecting an idle session, one of the following: • NONE (default): No limit set for this user. If you omit this parameter, no limit is set for this user. • ' *interval* ' : An interval value, up to one year. For details, see Managing client connections .
MAXCONNECTIONS	Sets the maximum number of connections the user can have to the server, one of the following: • NONE (default): No limit set. If you omit this parameter, the user can have an unlimited number of connections across the database cluster. • *integer* ON DATABASE : Sets to *integer* the maximum number of connections across the database cluster. • *integer* ON NODE : Sets to *integer* the maximum number of connections to each node. For details, see Managing client connections .

MEMORYCAP	Sets how much memory can be allocated to user requests, one of the following:
	• NONE (default): No limit
	• A string value that specifies the memory limit, one of the following:
	  ◦ ' *int* %' expresses the maximum as a percentage of total memory available to the Resource Manager, where *int* is an integer value between 0 and 100.For example:
	  MEMORYCAP '40%'
	  ◦ ' *int* {K|M|G|T}' expresses memory allocation in kilobytes, megabytes, gigabytes, or terabytes. For example:
	  MEMORYCAP '10G'

PASSWORD EXPIRE	Forces immediate expiration of the user's password. The user must change the password on the next login. **Note** PASSWORD EXPIRE has no effect when using external password authentication methods such as LDAP or Kerberos.
PROFILE	Assigns a profile that controls password requirements for this user, one of the following: • DEFAULT (default): Assigns the default database profile to this user. • *profile-name*: A profile that is defined by CREATE PROFILE. If you omit this parameter, the user is assigned the default profile.
RESOURCE POOL	Assigns a default resource pool to this user. The user must also be granted privileges to this pool, unless privileges to the pool are set to PUBLIC.
RUNTIMECAP	Sets how long this user's queries can execute, one of the following: • NONE (default): No limit set for this user. If you omit this parameter, no limit is set for this user. • '*interval*': An interval value, up to one year. A query's runtime limit can be set at three levels: the user's runtime limit, the user's resource pool, and the session setting. For more information, see Setting a runtime limit for queries.
SEARCH_PATH	Specifies the user's default search path, that tells Vertica which schemas to search for unqualified references to tables and UDFs, one of the following: • DEFAULT (default): Sets the search path as follows: `"$user", public, v_catalog, v_monitor, v_internal` • Comma-delimited list of schemas. For details, see Setting Search Paths.

TEMPSPACECAP	Sets how much temporary file storage is available for user requests, one of the following:
	
	• NONE (default): No limit
	• String value that specifies the storage limit, one of the following:
	  ◦ *int*% expresses the maximum as a percentage of total temporary storage available to the Resource Manager, where *int* is an integer value between 0 and 100. For example:
	  TEMPSPACECAP '40%'
	  ◦ *int*{K|M|G|T} expresses storage allocation in kilobytes, megabytes, gigabytes, or terabytes. For example:
	  TEMPSPACECAP '10G'

Privileges

Superuser

User name best practices

Vertica database user names are logically separate from user names of the operating system in which the server runs. If all the users of a particular server also have accounts on the server's machine, it makes sense to assign database user names that match their operating system user names. However, a server that accepts remote connections might many database users with no local operating system account. In this case, there is no need to connect database and system user names.

Examples

```
=> CREATE USER Fred IDENTIFIED BY 'Mxyzptlk';
=> GRANT USAGE ON SCHEMA PUBLIC to Fred;
```

See also

- ALTER USER
- DROP USER

CREATE VIEW

Defines a view . Views are read only, so they do not support insert, update, delete, or copy operations.

Syntax

```
CREATE [ OR REPLACE ] VIEW [[database.]schema.]view [ (column[,...]) ]
 [ {INCLUDE|EXCLUDE} [SCHEMA] PRIVILEGES ] AS query
```

Parameters

OR REPLACE

Specifies to overwrite the existing view *view-name* . If you omit this option and *view-name* already exists, CREATE VIEW returns an error.

Any grants assigned to the view before you execute a CREATE OR REPLACE remain on the updated view. See GRANT (view) .

[*database*] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

view

Identifies the view to create, where *view* conforms to conventions described in Identifiers . It must also be unique among all names of sequences, tables, projections, views, and models within the same schema.

***column* [,...]**

List of up to 9800 names to use as view column names. Vertica maps view column names to query columns according to the order of their respective lists. By default, the view uses column names as they are specified in the query.

query

A SELECT statement that the temporary view executes. The SELECT statement can reference tables, temporary tables, and other views.

{INCLUDE|EXCLUDE}[SCHEMA] PRIVILEGES

Specifies whether this view inherits schema privileges:

- INCLUDE PRIVILEGES specifies that the view inherits privileges that are set on its schema. This is the default behavior if privileges inheritance is enabled for the schema.
- EXCLUDE PRIVILEGES disables inheritance of privileges from the schema.

For details, see Inherited privileges .

Privileges

See Creating views .

Examples

The following example shows how to create a view that contains data from multiple tables.

```
=> CREATE VIEW temp_t0 AS SELECT * from t0_p1 UNION ALL
   SELECT * from t0_p2 UNION ALL
    SELECT * from t0_p3 UNION ALL
     SELECT * from t0_p4 UNION ALL
      SELECT * from t0_p5;
```

See also

- ALTER VIEW
- CREATE LOCAL TEMPORARY VIEW
- Creating views
- DROP VIEW
- GRANT (view)
- REVOKE (view)

DEACTIVATE DIRECTED QUERY

Deactivates one or more directed queries previously activated by ACTIVATE DIRECTED QUERY .

Syntax

DEACTIVATE DIRECTED QUERY { *query-name* | *input-query* }

Arguments

*** query-name ***

Identifies the directed query to deactivate. To obtain identifiers for directed queries, use GET DIRECTED QUERY , or query the system table DIRECTED_QUERIES .

*** input-query ***

The input query of the directed queries to deactivate. Use this argument to deactivate multiple direct queries that map to the same input query.

Privileges

Superuser

DELETE

Removes the specified rows from a table and returns a count of the deleted rows. A count of 0 is not an error, but indicates that no rows matched the condition. An unqualified DELETE statement (omits a WHERE clause) removes all rows but leaves intact table columns, projections, and constraints.

DELETE supports subqueries and joins, so you can delete values in a table based on values in other tables.

Important

Vertica's implementation of DELETE differs from traditional databases: it does not delete data from disk storage; it marks rows as deleted so they are available for historical queries.

Syntax

DELETE [/*+LABEL (*label-string*)*/] FROM [[*database*.]*schema*.]*table* [*where-clause*]

Parameters

LABEL

Assigns a label to a statement to identify it for profiling and debugging.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

table

Any table, including temporary tables.

where-clause

Specifies which rows to mark for deletion. If you omit this clause, DELETE behavior varies depending on whether the table is persistent or temporary. See below for details.

Privileges

Table owner or user with GRANT OPTION is grantor.

- DELETE privilege on table
- USAGE privilege on the schema of the target table
- SELECT privilege on a table when the DELETE statement includes a WHERE or SET clause that specifies columns from that table.

Restrictions

You cannot execute DELETE on a projection.

Committing successive table changes

Vertica follows the SQL-92 transaction model, so successive INSERT, UPDATE, and DELETE statements are included in the same transaction. You do not need to explicitly start this transaction; however, you must explicitly end it with COMMIT , or implicitly end it with COPY . Otherwise, Vertica discards all changes that were made within the transaction.

Deleting from persistent tables

DELETE removes data directly from the ROS.

Deleting from a temporary table

DELETE execution on temporary tables varies, depending on whether the table was created with ON COMMIT DELETE ROWS (default) or ON COMMIT PRESERVE ROWS :

- If DELETE contains a WHERE clause that specifies which rows to remove, behavior is identical: DELETE marks the rows for deletion. In both cases, you cannot roll back to an earlier savepoint.
- If DELETE omits a WHERE clause and the table was created with ON COMMIT PRESERVE ROWS , Vertica marks all table rows for deletion. If the table was created with ON COMMIT DELETE ROWS , DELETE behaves like TRUNCATE TABLE and removes all rows from storage.

> **Note**
> If you issue an unqualified DELETE statement on a temporary table created with ON COMMIT DELETE ROWS , Vertica removes all rows from storage but does not end the transaction.

Examples

The following command removes all rows from temporary table temp1 :

```
=> DELETE FROM temp1;
```

The following command deletes all records from anchor table T where C1 = C2 - C1 .

```
=> DELETE FROM T WHERE C1=C2-C1;
```

The following command deletes all records from the customer table in the retail schema where the state attribute is in MA or NH:

```
=> DELETE FROM retail.customer WHERE  state IN ('MA', 'NH');
```

For examples that show how to nest a subquery within a DELETE statement, see Subqueries in UPDATE and DELETE .

See also

- DROP TABLE
- TRUNCATE TABLE
- Removing table data
- Optimizing DELETE and UPDATE

DISCONNECT

Closes a connection to another Vertica database that was opened in the same session with CONNECT TO VERTICA .

> **Note**
> Closing your session also closes the database connection. However, it is a good practice to explicitly close the connection to the other database, both to free up resources and to prevent issues with other SQL scripts that might be running in your session. Always closing the connection prevents potential errors if you run a script in the same session that attempts to open a connection to the same database, since each session can only have one connection to a given database at a time.

Syntax

```
DISCONNECT db-spec
```

Parameters

db-spec

Specifies the target database, either the database name or DEFAULT .

Privileges

None

Examples

```
=> DISCONNECT DEFAULT;
DISCONNECT
```

DO

Executes an anonymous (unnamed) stored procedure without saving it.

Syntax

```
DO [ LANGUAGE 'language-name' ] $$
   source
$$;
```

Parameters

language-name

Specifies the language of the procedure *source* , one of the following (both options refer to PLvSQL ; PLpgSQL is included to maintain compatibility with existing scripts):

- PLvSQL
- PLpgSQL

Default: PLvSQL

source

The source code of the procedure.

Privileges

None

Examples

For more complex examples, see Stored procedures: use cases and examples

This procedure prints the variables in the DECLARE block:

```
DO LANGUAGE PLvSQL $$
DECLARE
   x int := 3;
   y varchar := 'some string';
BEGIN
   RAISE NOTICE 'x = %', x;
   RAISE NOTICE 'y = %', y;
END;
$$;

NOTICE 2005:  x = 3
NOTICE 2005:  y = some string
```

For more information on RAISE NOTICE, see Errors and diagnostics .

DROP statements

DROP statements let you delete database objects such as schemas, tables, and users.

In this section

- DROP ACCESS POLICY
- DROP AGGREGATE FUNCTION
- DROP ANALYTIC FUNCTION
- DROP AUTHENTICATION
- DROP CA BUNDLE
- DROP CERTIFICATE
- DROP DIRECTED QUERY
- DROP FAULT GROUP
- DROP FILTER
- DROP FUNCTION
- DROP KEY
- DROP LIBRARY
- DROP LOAD BALANCE GROUP
- DROP MODEL

- DROP NETWORK ADDRESS
- DROP NETWORK INTERFACE
- DROP NOTIFIER
- DROP PARSER
- DROP PROCEDURE (external)
- DROP PROCEDURE (stored)
- DROP PROFILE
- DROP PROJECTION
- DROP RESOURCE POOL
- DROP ROLE
- DROP ROUTING RULE
- DROP SCHEMA
- DROP SEQUENCE
- DROP SOURCE
- DROP SUBNET
- DROP TABLE
- DROP TEXT INDEX
- DROP TRANSFORM FUNCTION
- DROP USER
- DROP VIEW

DROP ACCESS POLICY

Removes an access policy from a column or row.

Syntax

```
DROP ACCESS POLICY ON table FOR { COLUMN column | ROWS}
```

Parameters

table

Name of the table that contains the column access policy to remove

column

Name of the column that contains the access policy to remove

Privileges

Non-superuser: Ownership of the table

Examples

These examples show various cases where you can drop an access policy.

Drop column access policy:

```
=> DROP ACCESS POLICY ON customer FOR COLUMN Customer_Number;
```

Drop row access policy on a table:

```
=> DROP ACCESS POLICY ON customer_info FOR ROWS;
```

DROP AGGREGATE FUNCTION

Drops a user-defined aggregate function (UDAnF) from the Vertica catalog.

Syntax

```
DROP AGGREGATE FUNCTION [ IF EXISTS ] [[database.]schema.]function( [ arglist ] )
```

Parameters

IF EXISTS

Specifies not to report an error if the function to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

function

Specifies a name of the SQL function to drop. If the function name is schema-qualified, the function is dropped from the specified schema (as noted above).

arglist

A comma delimited list of argument names and data types that are passed to the function, formatted as follows:

```
{ [argname] argtype }[,...]
```

- *argname* optionally specifies the argument name, typically a column name.
- *argtype* specifies the argument's data type, where *argtype* matches a Vertica data type .

Privileges

Non-superuser: Owner

Requirements

- To drop a function, you must specify the argument types because several functions might share the same name with different parameters.
- Vertica does not check for dependencies, so if you drop a SQL function where other objects reference it (such as views or other SQL functions), Vertica returns an error when those objects are used and not when the function is dropped.

Examples

The following command drops the ag_avg function:

```
=> DROP AGGREGATE FUNCTION ag_avg(numeric);
DROP AGGREGATE FUNCTION
```

See also

Aggregate functions (UDAFs)

DROP ANALYTIC FUNCTION

Drops a user-defined analytic function from the Vertica catalog.

Syntax

```
DROP ANALYTIC FUNCTION [ IF EXISTS ] [[database.]schema.]function( [ arglist ] )
```

Parameters

IF EXISTS

Specifies not to report an error if the function to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

function

Specifies a name of the SQL function to drop. If the function name is schema-qualified, the function is dropped from the specified schema (as noted above).

arglist

A comma delimited list of argument names and data types that are passed to the function, formatted as follows:

```
{ [argname] argtype }[,...]
```

- *argname* optionally specifies the argument name, typically a column name.
- *argtype* specifies the argument's data type, where *argtype* matches a Vertica data type .

Privileges

Non-superuser: Owner

Requirements

- To drop a function, you must specify the argument types because several functions might share the same name with different parameters.
- Vertica does not check for dependencies, so if you drop a SQL function where other objects reference it (such as views or other SQL functions), Vertica returns an error when those objects are used and not when the function is dropped.

Examples

The following command drops the analytic_avg function:

```
=> DROP ANALYTIC FUNCTION analytic_avg(numeric);
DROP ANALYTIC FUNCTION
```

See also

Analytic functions (UDAnFs)

DROP AUTHENTICATION

Drops an authentication method.

Syntax

```
DROP AUTHENTICATION [ IF EXISTS ] auth-method-name [ CASCADE ]
```

Parameters

IF EXISTS

Specifies not to report an error if the authentication method to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

auth-method-name

Name of the authentication method to drop.

CASCADE

Required if the authentication method to drop is granted to users. In this case, omission of this option causes the drop operation to fail.

Privileges

Superuser

Examples

Delete authentication method md5_auth :

```
=> DROP AUTHENTICATION md5_auth;
```

Use CASCADE to drop authentication method that was granted to a user:

```
=> CREATE AUTHENTICATION localpwd METHOD 'password' LOCAL;
=> GRANT AUTHENTICATION localpwd TO jsmith;
=> DROP AUTHENTICATION localpwd CASCADE;
```

See also

- ALTER AUTHENTICATION
- CREATE AUTHENTICATION
- GRANT (authentication)
- REVOKE (authentication)

DROP CA BUNDLE

Drops a certificate authority (CA) bundle.

Syntax

```
DROP CA BUNDLE [ IF EXISTS ] name [,...] [ CASCADE ]
```

Parameters

IF EXISTS

Vertica does not report an error if the CA bundle to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

name

The name of the CA bundle.

CASCADE

Drops dependent objects before dropping the CA bundle.

Privileges

Ownership of the CA bundle

Examples

See Managing CA bundles .

See also

- CREATE CA BUNDLE
- ALTER CA BUNDLE

DROP CERTIFICATE

Drops a TLS certificate from the database.

To view existing certificates, query CERTIFICATES .

Syntax

```
DROP CERTIFICATE [ IF EXISTS ] certificate-name [,...] [ CASCADE ]
```

Parameters

IF EXISTS

Vertica does not report an error if the certificate to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

certificate-name

The name of the certificate to drop.

CASCADE

Drops dependent objects before dropping the certificate.

Privileges

Ownership of the certificate

Examples

Drop server_cert , if it exists:

```
=> DROP CERTIFICATE server_cert;
DROP CERTIFICATE;
```

Drop a CA certificate and its dependencies (typically the certificates that it has signed):

```
=> DROP CERTIFICATE ca_cert CASCADE;
DROP CERTIFICATE;
```

See also

- CREATE CERTIFICATE
- DROP KEY

DROP DIRECTED QUERY

Removes a directed query from the database. If the directed query is active, Vertica deactivates it before removal.

Syntax

```
DROP DIRECTED QUERY directed-query-id
```

Arguments

*** directed-query-id ***

Identifies the directed query to remove from the database. To obtain identifiers for directed queries, use GET DIRECTED QUERY , or query the system table DIRECTED_QUERIES .

Privileges

Superuser

DROP FAULT GROUP

Removes the specified fault group and its child fault groups, placing all nodes under the parent of the dropped fault group.

To drop all fault groups, use ALTER DATABASE..DROP ALL FAULT GROUP .

To add an orphaned node back to a fault group, you must manually reassign it to a new or existing fault group with CREATE FAULT GROUP and ALTER FAULT GROUP...ADD NODE .

> **Tip**

> For a list of all fault groups defined in the cluster, query system table FAULT_GROUPS .

Syntax

```
DROP FAULT GROUP [ IF EXISTS ] fault-group
```

Parameters

IF EXISTS

Specifies not to report an error if *fault-group* does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

fault-group

Specifies the name of the fault group to drop.

Privileges

Superuser

Examples

```
=> DROP FAULT GROUP group2;
DROP FAULT GROUP
```

See also

- Fault groups
- High availability with fault groups
- CLUSTER_LAYOUT

DROP FILTER

Drops a User Defined Load Filter function from the Vertica catalog.

Syntax

```
DROP FILTER [[database.]schema.]filter()
```

Parameters

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

***filter* ()**

Specifies the filter function to drop. You must append empty parentheses to the function name.

Privileges

Non-superuser:

- Owner or DROP privilege
- USAGE privilege on schema

Examples

The following command drops the lconverter filter function::

```
=> drop filter lconverter();
DROP FILTER
```

See also

- ALTER FUNCTION (scalar)
- CREATE FILTER
- USER_FUNCTIONS
- User-defined load (UDL)

DROP FUNCTION

Drops an SQL function or user-defined functions (UDFs) from the Vertica catalog.

Syntax

```
DROP FUNCTION [ IF EXISTS ] [[database.]schema.]function[,...] ( [ arg-list ] )
```

Parameters

IF EXISTS

Specifies not to report an error if the function to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

function

The SQL or user-defined function (UDF) to drop, where UDFs can be one of the following types:

- Scalar function (UDSF)
- Analytic function (UDAnF)
- Load (UDL) functions: source , filter , and parser

> **Note**
> You drop aggregate and transformation functions with DROP AGGREGATE FUNCTION and DROP TRANSFORM FUNCTION , respectively.

*** arg-list ***

A comma-delimited list of arguments as defined for this function when it was created, specified as follows:
[*arg-name*] *arg-type* [,...]

where *arg-name* optionally qualifies *arg-type* :

- *arg-name* is typically a column name.
- *arg-type* is the name of an SQL data type supported by Vertica.

Privileges

Non-superuser, one of the following:

- Owner or DROP privilege
- USAGE privilege on schema

Requirements

- To drop a function, you must specify the argument types because several functions might share the same name with different parameters.
- Vertica does not check for dependencies when you drop a SQL function, so if other objects reference it (such as views or other SQL functions), Vertica returns an error only when those objects are used.

Examples

The following command drops the zerowhennull function in the macros schema:

```
=>  DROP FUNCTION macros.zerowhennull(x INT);
DROP FUNCTION
```

See also

DROP KEY

Drops a cryptographic key from the database.

To view existing cryptographic keys, query CRYPTOGRAPHIC_KEYS .

Syntax

```
DROP KEY [ IF EXISTS ] key-name [,...] [ CASCADE ]
```

Parameters

IF EXISTS

Vertica does not report an error if the key to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

key-name

The name of the cryptographic key to drop.

CASCADE

Drops dependent objects before dropping the key.

Privileges

Ownership of the key

Examples

Drop k_ca , if it exists:

```
=> DROP KEY k_ca IF EXISTS;
DROP KEY;
```

Drop k_client and its dependencies (the certificate it's associated with):

```
=> DROP KEY k_client CASCADE;
DROP KEY;
```

See also

- CREATE KEY
- DROP CERTIFICATE

DROP LIBRARY

Removes a UDx library from the database. The library file is deleted from managed directories on the Vertica nodes. The user-defined functions (UDFs) in the library are no longer available. See Developing user-defined extensions (UDxs) for details.

Syntax

```
DROP LIBRARY [ IF EXISTS ] [[database.]schema.]library [  CASCADE]
```

Arguments

IF EXISTS

Execute this command only if the library exists. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** library ***

The name of the library to drop, the same name used in CREATE LIBRARY to load the library.

CASCADE

Also drop any functions that were defined using the library. DROP LIBRARY fails if CASCADE is omitted and one or more UDxs use the target library.

Privileges

One of:

- Superuser
- UDXDEVELOPER and library owner (the user who created it with CREATE LIBRARY)
- UDXDEVELOPER and DROP grant on the library (see GRANT (library))

Examples

A superuser can drop any library:

```
=> DROP LIBRARY ml.MyLib CASCADE;
```

Users with the UDXDEVELOPER role can drop libraries that they created:

```
=> GRANT UDXDEVELOPER TO alice, bob;
GRANT ROLE

=> \c - alice;
You are now connected as user "alice".

-- Must enable the role before using:
=> SET ROLE UDXDEVELOPER;
SET

-- Create and use ml.mylib...

-- Drop library and dependencies:
DROP LIBRARY ml.mylib CASCADE;
DROP LIBRARY
```

A user can be granted explicit permission to drop a library:

```
=> \c - alice
You are now connected as user "alice".

=> GRANT DROP ON LIBRARY ml.mylib to bob;
GRANT PRIVILEGE

=> \c - bob
You are now connected as user "bob".

=> SET ROLE UDXDEVELOPER;
SET

=> DROP LIBRARY ml.mylib cascade;
DROP LIBRARY
```

DROP LOAD BALANCE GROUP

Deletes a load balancing group.

Syntax

```
DROP LOAD BALANCE GROUP [ IF EXISTS ] group_name [ CASCADE ]
```

Parameters

IF EXISTS

Specifies not to report an error if the load balance group to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

group_name

The name of the group to drop.

[CASCADE]

Also drops all load balancing routing rules that target this group. If you do not supply this keyword and one or more routing rules target *group_name* , this statement fails with an error message.

Privileges

Superuser

Examples

The following statement demonstrates the error you get if the load balancing group has a dependent routing rule, and the use of the CASCADE keyword:

```
=> DROP LOAD BALANCE GROUP group_all;
NOTICE 4927:  The RoutingRule catch_all depends on LoadBalanceGroup group_all
ROLLBACK 3128:  DROP failed due to dependencies
DETAIL:  Cannot drop LoadBalanceGroup group_all because other objects depend on it
HINT:  Use DROP ... CASCADE to drop the dependent objects too

=> DROP LOAD BALANCE GROUP group_all CASCADE;
DROP LOAD BALANCE GROUP
```

See also

DROP MODEL

Removes one or more models from the Vertica database.

Syntax

```
DROP MODEL [ IF EXISTS ] [[database.]schema.]model[,...]
```

Parameters

IF EXISTS

Specifies not to report an error if the models to drop do not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

model

The model to drop.

Privileges

One of the following:

- Superuser
- Non-superuser: model owner

Examples

See Dropping models .

DROP NETWORK ADDRESS

Deletes a network address from the catalog. A network address is a name for a IP address and port on a node for use in connection load balancing policies.

Syntax

```
DROP NETWORK ADDRESS [ IF EXISTS ] address-name [ CASCADE ]
```

Parameters

IF EXISTS

Specifies not to report an error if the network address to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

address-name

Name of the network address to drop.

CASCADE

Removes the network address from any load balancing groups that target it. If you do not supply this keyword and one or more load balance groups include this address, this statement fails with an error message.

Privileges

Superuser

Examples

The following statement demonstrates the error you get if the network address has a dependent load balance group, and the use of the CASCADE keyword:

```
=> DROP NETWORK ADDRESS node01;
NOTICE 4927:  The LoadBalanceGroup group_1 depends on NetworkInterface node01
NOTICE 4927:  The LoadBalanceGroup group_random depends on NetworkInterface node01
ROLLBACK 3128:  DROP failed due to dependencies
DETAIL:  Cannot drop NetworkInterface node01 because other objects depend on it
HINT:  Use DROP ... CASCADE to drop the dependent objects too
=> DROP NETWORK ADDRESS node01 CASCADE;
DROP NETWORK ADDRESS
```

DROP NETWORK INTERFACE

Removes a network interface from Vertica. You can use the CASCADE option to also remove the network interface from any node definition. (See Identify the database or nodes used for import/export for more information.)

Syntax

```
DROP NETWORK INTERFACE [ IF EXISTS ] network-interface-name [ CASCADE ]
```

Parameters

The parameters are defined as follows:

IF EXISTS

Specifies not to report an error if the network interface to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

network-interface-name

The network interface to remove.

CASCADE

Removes the network interface from all node definitions.

Privileges

Superuser

Examples

```
=> DROP NETWORK INTERFACE myNetwork;
```

DROP NOTIFIER

Drops a push-based notifier created by CREATE NOTIFIER .

Syntax

```
DROP NOTIFIER [ IF EXISTS ] notifier-name [ CASCADE ]
```

Parameters

IF EXISTS

Specifies not to report an error if notifier to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

notifier-name

The notifier's unique identifier.

CASCADE

Removes the notifier from any data collector (DC) table policies before dropping the notifier. If the notifier is set for a DC table and CASCADE is not specified, the DROP command fails.

To manually remove the notifier from DC table policies, use the SET_DATA_COLLECTOR_NOTIFY_POLICY function.

Examples

Drop the requests_issued notifier, specifying CASCADE to remove it from any DC table policies:

```
DROP NOTIFIER requests_issued CASCADE;
```

DROP PARSER

Drops a User Defined Load Parser function from the Vertica catalog.

Syntax

```
DROP PARSER[[database.]schema.]parser()
```

Parameters

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

***parser* ()**

The name of the parser function to drop. You must append empty parentheses to the function name.

Privileges

Non-superuser:

- Owner or DROP privilege
- USAGE privilege on schema

Examples

```
=> DROP PARSER BasicIntegerParser();
DROP PARSER
```

See also

- ALTER FUNCTION (scalar)
- CREATE PARSER
- GRANT (User Defined Extension)
- REVOKE (User Defined Extension)
- USER_FUNCTIONS
- User-defined load (UDL)

DROP PROCEDURE (external)

Enterprise Mode only

Removes an external procedure from Vertica. Only the reference to the procedure inside Vertica is removed. The external file remains in the *database* / *procedures* directory of each database node.

Syntax

```
DROP PROCEDURE [ IF EXISTS ] [[database.]schema.]procedure( [ parameter-list ] )
```

Parameters

IF EXISTS

Specifies not to report an error if the procedure to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

procedure

Specifies the procedure to drop.

parameter-list

A comma-delimited list of formal parameters defined for this procedure, specified as follows:

[*parameter-name*] *parameter-type* [,...]

where *parameter-name* optionally qualifies *parameter-type* .

Privileges

Non-superuser:

- Owner or DROP privilege
- USAGE privilege on schema

Examples

```
=> DROP PROCEDURE helloplanet(arg1 varchar);
```

See also

CREATE PROCEDURE (external)
DROP PROCEDURE (stored)

Drops a stored procedure .

Syntax

```
DROP PROCEDURE [ IF EXISTS ] [[database.]schema.]procedure( [ parameter-type-list] );
```

Parameters

IF EXISTS

Specifies not to report an error if the procedure to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** procedure ***

The name of the stored procedure, where *procedure* conforms to conventions described in Identifiers .

parameter-type-list

A comma-delimited list of the IN parameters' types.

Privileges

Non-superuser:

- Owner or DROP privilege
- USAGE privilege on schema

Examples

Given the following procedure:

```
=> CREATE PROCEDURE raiseXY(IN x INT, y VARCHAR) LANGUAGE PLvSQL AS $$
BEGIN
   RAISE NOTICE 'x = %', x;
   RAISE NOTICE 'y = %', y;
   -- some processing statements
END;
$$;

CALL raiseXY(3, 'some string');
NOTICE 2005:  x = 3
NOTICE 2005:  y = some string
```

You can drop it with:

```
=> DROP PROCEDURE raiseXY(INT, VARCHAR);
DROP PROCEDURE
```

For more information on RAISE NOTICE, see Errors and diagnostics .

See also

- CREATE PROCEDURE (stored)
- DROP PROCEDURE (external)

DROP PROFILE

Removes a user-defined profile (created by CREATE PROFILE) from the database. You cannot drop the DEFAULT profile.

Syntax

```
DROP PROFILE [ IF EXISTS ] profile-name[,...] [ CASCADE ]
```

Parameters

IF EXISTS

Specifies not to report an error if the profile to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent

objects before attempting to create them.

profile-name

The profile to drop.

CASCADE

Moves all users assigned to the dropped profiles to the DEFAULT profile. If you omit this option and a targeted profile has users assigned to it, Vertica returns an error.

Privileges

Superuser

Examples

```
=> DROP PROFILE sample_profile;
```

DROP PROJECTION

Marks a projection to drop from the catalog so it is unavailable to user queries.

Syntax

```
DROP PROJECTION [ IF EXISTS ] { [[database.]schema.]projection[,...] } [ RESTRICT | CASCADE ]
```

Parameters

IF EXISTS

Specifies not to report an error if the projection to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** projection ***

Specifies a projection to drop:

- If the projection is unsegmented, all projection replicas in the database cluster are dropped.
- If the projection is segmented, drop all buddy projections by specifying the projection base name. You can also specify the name of a specific buddy projection as long as dropping it so does not violate system K-safety .

See Projection naming for projection name conventions.

RESTRICT | CASCADE

Specifies whether to drop the projection when it contains objects:

- RESTRICT (default): Drop the projection only if it contains no objects.
- CASCADE : Drop the projection even if it contains objects.

Privileges

Non-superuser: owner of the anchor table

Restrictions

The following restrictions apply to dropping a projection:

- The projection cannot be the anchor table's superprojection .
- You cannot drop a buddy projection if doing so violates system K-safety .
- Another projection must be available to enforce the same primary or unique key constraint.

See also

- CREATE PROJECTION
- GET_PROJECTIONS

DROP RESOURCE POOL

Drops a user-created resource pool. All memory allocated to the pool is returned back to the GENERAL pool .

Syntax

```
DROP RESOURCE POOL pool-name [ FOR subcluster-spec ]
```

Parameters

pool-name

Specifies the resource pool to drop.

FOR ***subcluster-spec***

Eon Mode only, drops this resource pool from the specified subcluster, where *subcluster-spec* is one of the following:

- SUBCLUSTER *subcluster-name* : Drops *pool-name* from the named subcluster . You cannot be connected to this subcluster, otherwise Vertica returns an error.
- CURRENT SUBCLUSTER : Drops *pool-name* from the subcluster that you are connected to.

If you omit this parameter, the resource pool is dropped from all subclusters. If a resource pool was created for an individual subcluster, you must explicitly drop it from that subcluster by specifying this parameter; otherwise, Vertica returns an error.

Privileges

Superuser

Dropping a secondary pool

If you try to drop a resource pool that is a secondary pool for another resource pool, Vertica returns an error. The error lists the resource pools that depend on the secondary pool you tried to drop. To drop a secondary resource pool, first set the CASCADE TO parameter to DEFAULT on the primary resource pool, and then drop the secondary pool.

For example, you can drop resource pool rp2 , which is a secondary pool for rp1 , as follows:

```
=> ALTER RESOURCE POOL rp1 CASCADE TO DEFAULT;
=> DROP RESOURCE POOL rp2;
```

Transferring resource requests

Any requests queued against the pool are transferred to the GENERAL pool according to the priority of the pool compared to the GENERAL pool. If the pool's priority is higher than the GENERAL pool, the requests are placed at the head of the queue; otherwise the requests are placed at the end of the queue.

Any users who are using the pool are switched to use the GENERAL pool with a NOTICE:

```
NOTICE:  Switched the following users to the General pool: username
```

DROP RESOURCE POOL returns an error if the user does not have permission to use the GENERAL pool. Existing sessions are transferred to the GENERAL pool regardless of whether the session's user has permission to use the GENERAL pool. This can result in additional user privileges if the pool being dropped is more restrictive than the GENERAL pool. To prevent giving users additional privileges, follow this procedure to drop restrictive pools:

1. Revoke the permissions on the pool for all users.
2. Close any sessions that had permissions on the pool.
3. Drop the resource pool.

Examples

This example drops a user-defined resource pool:

```
=> DROP RESOURCE POOL ceo_pool;
```

This Eon Mode example returns the current subcluster, then drops a user-defined resource pool for the current subcluster:

```
=> SELECT CURRENT_SUBCLUSTER_NAME();
 CURRENT_SUBCLUSTER_NAME
-------------------------
 analytics_1
(1 row)

=> DROP RESOURCE POOL dashboard FOR CURRENT SUBCLUSTER;
DROP RESOURCE POOL
```

See also

- ALTER RESOURCE POOL
- CREATE RESOURCE POOL
- Managing workloads

DROP ROLE

Removes a role from the database.

> **Note**
> You cannot use DROP ROLE on a role added to the Vertica database with the LDAPLink service.

Syntax

```
DROP ROLE [ IF EXISTS ] role-name[,...] [ CASCADE ]
```

Parameters

IF EXISTS

Specifies not to report an error if the roles to drop do not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

role-name

The name of the role to drop

CASCADE

Revoke the role from users and other roles before dropping the role

Privileges

Superuser

Examples

```
=> DROP ROLE appadmin;
NOTICE:  User bob depends on Role appadmin
ROLLBACK:  DROP ROLE failed due to dependencies
DETAIL:  Cannot drop Role appadmin because other objects depend on it
HINT:  Use DROP ROLE ... CASCADE to remove granted roles from the dependent users/roles
=> DROP ROLE appadmin CASCADE;
DROP ROLE
```

See also

- ALTER ROLE
- CREATE ROLE

DROP ROUTING RULE

Deletes a routing rule from the catalog.

Syntax

```
DROP ROUTING RULE [ IF EXISTS ] rule-name
```

Parameters

IF EXISTS

Specifies not to report an error if the routing rule to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

*** rule-name ***

Name of the rule to drop.

Privileges

Superuser

Examples

```
=> DROP ROUTING RULE internal_clients;
DROP ROUTING RULE
```

DROP SCHEMA

Permanently removes a schema from the database. Be sure that you want to remove the schema before you drop it, because DROP SCHEMA is an irreversible process. Use the CASCADE parameter to drop a schema containing one or more objects.

Syntax

```
DROP SCHEMA [ IF EXISTS ] [database.]schema[,...] [ CASCADE | RESTRICT ]
```

Parameters

IF EXISTS

Specifies not to report an error if the schemas to drop do not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Name of the schema to drop. If you specify a database, it must be the current database.

CASCADE

Specifies to drop the schema and all objects in it, regardless of who owns those objects.

> **Caution**
> Objects in other schemas that depend on objects in the dropped schema—for example, user-defined functions—also are silently dropped.

RESTRICT

Drops the schema only if it is empty (default).

Privileges

Non-superuser: schema owner

Restrictions

- You cannot drop the PUBLIC schema.
- If a user is accessing an object within a schema that is in the process of being dropped, the schema is not deleted until the transaction completes.
- Canceling a DROP SCHEMA statement can cause unpredictable results.

Examples

The following example drops schema S1 only if it doesn't contain any objects:

```
=> DROP SCHEMA S1;
```

The following example drops schema S1 whether or not it contains objects:

```
=> DROP SCHEMA S1 CASCADE;
```

DROP SEQUENCE

Removes the specified named sequence number generator.

Syntax

```
DROP SEQUENCE [ IF EXISTS ] [[database.]schema.]sequence[,...]
```

Parameters

IF EXISTS

Specifies not to report an error if the sequences to drop do not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

sequence

Name of the sequence to drop.

Privileges

Non-superusers: sequence or schema owner

Restrictions

- For sequences specified in a table's default expression, the default expression fails the next time you try to load data. Vertica does not check for these instances.
- DROP SEQUENCE does not support the CASCADE keyword. Sequences used in a default expression of a column cannot be dropped until all references to the sequence are removed from the default expression.

Examples

The following command drops the sequence named sequential .

```
=> DROP SEQUENCE sequential;
```

See also

- ALTER SEQUENCE
- CREATE SEQUENCE
- CURRVAL
- GRANT (sequence)
- NEXTVAL
- Sequences

DROP SOURCE

Drops a User Defined Load Source function from the Vertica catalog.

Syntax

```
DROP SOURCE [[database.]schema.]source()
```

Parameters

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

***source* ()**

Specifies the source function to drop. You must append empty parentheses to the function name.

Privileges

Non-superuser:

- Owner or DROP privilege
- USAGE privilege on schema

Examples

The following command drops the curl source function:

```
=> DROP SOURCE curl();
DROP SOURCE
```

See also

- ALTER FUNCTION (scalar)
- CREATE SOURCE
- GRANT (User Defined Extension)
- REVOKE (User Defined Extension)
- USER_FUNCTIONS
- User-defined load (UDL)

DROP SUBNET

Removes a subnet from Vertica.

Caution

Before removing a subnet, be sure your database is not configured to allow export on the public subnet.

Syntax

```
DROP SUBNET [ IF EXISTS ] subnet-name[,...] [ CASCADE ]
```

Parameters

The parameters are defined as follows:

IF EXISTS

Specifies not to report an error if the subnets to drop do not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

subnet-name

A subnet to remove.

CASCADE

Removes the specified subnets from all database definitions.

Privileges

Superuser

Examples

```
=> DROP SUBNET mySubnet;
```

See also

Identify the database or nodes used for import/export

DROP TABLE

Removes one or more tables and their projections . When you run DROP TABLE , the change is auto-committed.

Syntax

```
DROP TABLE [ IF EXISTS ] [ [database.]schema.]table[,...] [ CASCADE ]
```

Parameters

IF EXISTS

Specifies not to report an error if one or more of the tables to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** table ***

The table to drop.

CASCADE

Specifies to drop all projections of the target tables. CASCADE is optional if the target tables have only auto-projections . If you omit this option and any of the tables has non-superprojections, Vertica returns an error and rolls back the entire drop operation.

This option is not valid for external tables.

Privileges

Non-superuser:

- Table: owner, or DROP privilege
- Table schema: owner, or USAGE privilege

Requirements

- Do not cancel an executing DROP TABLE . Doing so can leave the database in an inconsistent state.
- Check that the target table is not in use, either directly or indirectly—for example, in a view.
- If you drop and restore a table that is referenced by a view, the new table must have the same name and column definitions.

Examples

See Dropping tables

See also

- DROP PROJECTION
- TRUNCATE TABLE

DROP TEXT INDEX

Drops a text index used to perform text searches.

> **Note**
> When a source table is dropped that has a text index associated with it, the text index is also dropped.

Syntax

```
DROP TEXT INDEX [ IF EXISTS ] [[database.]schema.]idx-table
```

Parameters

IF EXISTS

Specifies not to report an error if the text index to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** idx-table ***

Specifies the text index name. When using more than one schema, specify the schema that contains the index in the DROP TEXT INDEX statement.

Privileges

- dbadmin
- Table owner
- DROP privileges on the source table

Examples

```
=> DROP TEXT INDEX t_text_index;
DROP INDEX
```

See also

- Using text search
- CREATE TEXT INDEX

DROP TRANSFORM FUNCTION

Drops a user-defined transform function (UDTF) from the Vertica catalog.

Syntax

```
DROP TRANSFORM FUNCTION [ IF EXISTS ] [[database.]schema.]function( [ arg-list ] )
```

Parameters

IF EXISTS

Specifies not to report an error if the function to drop does not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

function

Specifies the transform function to drop.

*** arg-list ***

A comma-delimited list of arguments as defined for this function when it was created, specified as follows:
[*arg-name*] *arg-type* [,...]

where *arg-name* optionally qualifies *arg-type* :

- *arg-name* is typically a column name.
- *arg-type* is the name of an SQL data type supported by Vertica.

> **Note**
> You can omit *arg-list* when dropping a polymorphic function.

Privileges

One of the following:

- Superuser
- Schema or function owner

Examples

The following command drops the tokenize UDTF in the macros schema:

```
=> DROP TRANSFORM FUNCTION macros.tokenize(varchar);
DROP TRANSFORM FUNCTION
```

The following command drops the Pagerank polymorphic function in the online schema:

```
=> DROP TRANSFORM FUNCTION online.Pagerank();
DROP TRANSFORM FUNCTION
```

See also

CREATE TRANSFORM FUNCTION

DROP USER

Removes a name from the list of authorized database users.

> **Note**
> DROP USER can not remove a user that was added to the Vertica database with the LDAPLink service.

Syntax

```
DROP USER [ IF EXISTS ] user-name[,...] [ CASCADE ]
```

Parameters

IF EXISTS

Do not report an error if the users to drop do not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

user-name

Name of a user to drop.

CASCADE

Drop all user-defined objects created by *user-name* , including schemas, tables and all views that reference the table, and projections of that table.

> **Caution**
> Tables owned by the dropped user cannot be recovered after you issue DROP USER CASCADE.

Privileges

Superuser

Examples

DROP USER succeeds if no user-defined objects exist:

```
=> CREATE USER user2;
CREATE USER
=> DROP USER IF EXISTS user2;
DROP USER
```

DROP USER fails if objects that the user created still exist:

```
=> DROP USER IF EXISTS user1;
NOTICE:  Table T_tbd1 depends on User user1
ROLLBACK:  DROP failed due to dependencies
DETAIL:  Cannot drop User user1 because other objects depend on it
HINT:  Use DROP ... CASCADE to drop the dependent objects too
```

DROP USER CASCADE succeeds regardless of any existing user-defined objects. The statement forcibly drops all user-defined objects, such as schemas, tables and their associated projections:

```
=> DROP USER IF EXISTS user1 CASCADE;
DROP USER
```

See also

- ALTER USER
- CREATE USER

DROP VIEW

Removes the specified view. Vertica does not check for dependencies on the dropped view. After dropping a view, other views that reference it fail.

If you drop a view and replace it with another view or table with the same name and column names, other views that reference that name use the new view. If you change the column data type in the new view, the server coerces the old data type to the new one if possible; otherwise, it returns an error.

Syntax

```
DROP VIEW [ IF EXISTS ] [[database.]schema.]view[,...]
```

Parameters

IF EXISTS

Specifies not to report an error if the views to drop do not exist. Use this clause in SQL scripts to avoid errors on dropping non-existent objects before attempting to create them.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

view

Name of a view to drop.

Privileges

One of the following

- View owner and USAGE privileges
- Schema owner

Examples

```
=> DROP VIEW myview;
```

END

Ends the current transaction and makes all changes that occurred during the transaction permanent and visible to other users.

> **Note**
> COMMIT is a synonym for END.

Syntax

```
END [ WORK | TRANSACTION ]
```

Parameters

WORK | TRANSACTION

Optional keywords that have no effect, for readability only.

Privileges

None

Examples

```
=> BEGIN TRANSACTION ISOLATION LEVEL READ COMMITTED READ WRITE;
BEGIN
=> CREATE TABLE sample_table (a INT);
CREATE TABLE
=> INSERT INTO sample_table (a) VALUES (1);
OUTPUT
--------
1
(1 row)

=> END;
COMMIT
```

See also

- Transactions
- Creating and rolling back transactions
- BEGIN
- ROLLBACK
- START TRANSACTION

EXPLAIN

Returns a formatted description of the Vertica optimizer's plan for executing the specified statement.

Syntax

```
EXPLAIN [/*+ ALLNODES */] [explain-options] sql-statement
```

Parameters

/*+ ALLNODES */

Specifies to create a query plan that assumes all nodes are active, not valid with LOCAL option.

explain-options

One or more EXPLAIN options, specified in the order shown:

```
[ LOCAL ] [ VERBOSE ] [ JSON ] [ ANNOTATED ]
```

- LOCAL : On a multi-node database, shows the local query plans assigned to each node, which together comprise the total (global) query plan. If you omit this option, Vertica shows only the global query plan. Local query plans are shown only in DOT language source, which can be rendered in Graphviz .
  This option is incompatible with the hint /*+ALL NODES*/ . If you specify both, EXPLAIN returns with an error.
- VERBOSE : Increases the level of detail in the rendered query plan.
- JSON : Renders the query plan in JSON format. This option is compatible only with VERBOSE .
- ANNOTATED : Embeds optimizer hints that encapsulate the query plan for this query. Vertica uses these hints to create directed queries. For more information, see Directed queries . This option is compatible with LOCAL and VERBOSE .

sql-statement

A query or DML statement—for example, SELECT , INSERT , UPDATE , COPY , and MERGE .

Privileges

The same privileges required by the specified statement.

Requirements

The following requirements apply to EXPLAIN 's ability to produce useful information:

- Reasonably representative statistics of your data must be available. See Collecting Statistics for details.
- EXPLAIN produces useful output only if projections are available for the queried tables.
- Qualifier options must be specified in the order shown earlier , otherwise EXPLAIN returns with an error. If an option is incompatible with any preceding options, EXPLAIN ignores them.

Examples

See Viewing query plans .

EXPORT TO DELIMITED

Exports a table, columns from a table, or query results to delimited files. The files can be read back in using DELIMITED (parser) . Several exporter parameters have corresponding parser parameters, allowing you to change delimiters, null indicators, and other formatting.

There are some limitations on the queries you can use in an export statement. See Query Restrictions .

You can export data stored in Vertica in ROS format and data from external tables.

This statement returns the number of rows written and logs information about exported files in a system table. See Monitoring exports .

During an export to HDFS or an NFS mount point, Vertica writes files to a temporary directory in the same location as the destination and renames the directory when the export is complete. Do not attempt to use the files in the temporary directory. During an export to S3, GCS, or Azure, Vertica writes files directly to the destination path, so you must wait for the export to finish before reading the files. For more information, see Exporting to object stores .

Syntax

```
EXPORT [ /*+LABEL (label-string)*/ ] TO DELIMITED ( directory=path[, param=value [,...] ]
  [ OVER (over-clause ) ] AS SELECT query-expression
```

Parameters

LABEL

Assigns a label to a statement to identify it for profiling and debugging.

directory

The destination directory for the output files. The directory must not exist, and the current user must have permission to write it. The destination can be on any of the following file systems:

- HDFS file system
- S3 object store
- Google Cloud Storage (GCS) object store
- Azure Blob Storage object store
- Linux file system, either an NFS mount or local storage on each node

filename

If specified, all output is written to a single file of this name in the location specified by directory . While the query can be processed by multiple nodes, only a single node generates the output data. The fileSizeMB parameter is ignored, and the query cannot use partitioning in the OVER() clause.

addHeader

Boolean, specifies whether to add a header row to the beginning of each file.

Default: false

delimiter

Column delimiter character. To produce CSV in accordance with RFC 4180, set the delimiter character to , (comma).

Default: | (vertical bar)

recordTerminator

Character that marks the record end.

Default: \n

enclosedBy

Character to use to enclose string and date/time data. If you omit this parameter, no character encloses these data types.

Default: '' (empty string)

escapeAs

Character to use to escape values in exported data that must be escaped, including the enclosedBy value.

Default: \ (backslash)

nullAs

String to represent null values in the data. If this parameter is included, the exporter exports all null values as this value. Otherwise, the

exporter exports null values as zero-length strings.

binaryTypesFormat

Format for exported binary data type (BINARY, VARBINARY, and LONG VARBINARY) values, one of the following:

- Default : Printable ASCII characters where possible and escaped octal representations of the non-printable bytes. The DELIMITED parser reads this format.
- Hex : Base 16 (hexadecimal) representation; value is preceded by '0x' and bytes are not escaped.
- Octal : Base 8 (octal) representation, without escaping.
- Bitstring : Binary representation, without escaping.

For example, the value a\000b\001c can be exported as follows:

- Default (assuming an escape character of \ ): a\\000b\\001c
- Hex: 0x6100620163
- Octal: 141000142001143
- Bitstring: 011000010000000000110001000000000101100011

compression

Compression type, one of:

- Uncompressed
- BZip
- GZip

Default: Uncompressed

fileExtension

Output file extension. If using compression, a compression-specific extension such as .bz2 is appended.

Default: csv

fileSizeMB

The maximum file size of a single output file. This value is a hint, not a hard limit. A value of 0 specifies no limit. If filename is also specified, fileSizeMB is ignored.
This value affects the size of individual output files, not the total output size. For smaller values, Vertica divides the output into more files; all data is still exported.

Default: 10GB

fileMode

For writes to HDFS only, permission to apply to all exported files. You can specify the value in Unix octal format (such as 665) or *user - group - other* format—for example, rwxr-xr-x . The value must be formatted as a string even if using the octal format.
Valid octal values range between 0 and 1777 , inclusive. See HDFS Permissions in the Apache Hadoop documentation.

When writing files to any destination other than HDFS, this parameter has no effect.

Default: 660 , regardless of the value of fs.permissions.umask-mode in hdfs-site.xml .

dirMode

For writes to HDFS only, permission to apply to all exported directories. Values follow the same rules as those for *fileMode* . Further, you must give the Vertica HDFS user full permission, at least rwx------ or 700 .
When writing files to any destination other than HDFS, this parameter has no effect.

Default: 755 , regardless of the value of fs.permissions.umask-mode in hdfs-site.xml .

Arguments

over-clause

Specifies how to partition table data using PARTITION BY. Within partitions you can sort using ORDER BY. See SQL analytics . This clause may contain column references but not expressions.

If you partition data, Vertica creates a Hive-style partition directory structure, transforming column names to lowercase. See Using partition columns for a description of the directory structure. If you use the fileName parameter, you cannot use partitioning. Not all parsers can read partition columns as columns.
If you omit this clause, Vertica optimizes for maximum parallelism.

query-expression

Specifies the data to export. See Query Restrictions for important limitations.

Privileges

Non-superusers:

- Source table: SELECT
- Source table schema: USAGE
- Destination directory: Write

Query restrictions

The following requirements and restrictions apply:

- You must provide an alias column label for selected column targets that are expressions.
- The query can contain only a single outer SELECT statement. For example, you cannot use UNION:

```
=> EXPORT TO DELIMITED(directory = '/mnt/shared_nfs/accounts/rm')
  OVER(PARTITION BY hash)
  AS
  SELECT 1 as account_id, '{}' as json, 0 hash
  UNION ALL
  SELECT 2 as account_id, '{}' as json, 1 hash;
ERROR 8975:  Only a single outer SELECT statement is supported
HINT:  Please use a subquery for multiple outer SELECT statements
```

  Instead, rewrite the query to use a subquery:

```
=> EXPORT TO DELIMITED(directory = '/mnt/shared_nfs/accounts/rm')
  OVER(PARTITION BY hash)
  AS
  SELECT
   account_id,
   json
  FROM
  (
    SELECT 1 as account_id, '{}' as json, 0 hash
    UNION ALL
    SELECT 2 as account_id, '{}' as json, 1 hash
  ) a;
 Rows Exported
---------------
             2
(1 row)
```

- To use composite statements such as UNION, INTERSECT, and EXCEPT, rewrite them as subqueries.

Data types

This operation exports raw Flex columns as binary data.

Output

The export operation always creates an output directory, even if all output is written to a single file or the query produces zero rows.

Output file names follow the pattern: [*8-character-hash*]-[*nodename*]-[*thread-id*]. *fileExtension* .

Column names in partition directories are lowercase.

Files exported to a local file system by any Vertica user are owned by the Vertica superuser. Files exported to HDFS or object stores are owned by the Vertica user who exported the data.

The following requirements and restrictions apply:

- Avoid concurrent exports to the same output destination. Doing so is an error on any file system and can produce incorrect results.
- Use a shared file location for output. If you use a directory in the local file system, it must be an NFS-mounted directory.
- For output to the local file system, you must have a USER storage location.
- When exporting to the local file system, the permission mode is 700 for directories and 600 for files. You cannot override these values.

For restrictions specific to object stores (S3, GCS, or Azure), see Exporting to object stores .

Examples

The following example exports uncompressed comma-separated values (CSV) with a header row in each file:

```
=> EXPORT TO DELIMITED(directory='webhdfs:///user1/data', delimiter=',', addHeader='true')
 AS SELECT * FROM public.sales;
```

EXPORT TO JSON

Exports a table, columns from a table, or query results to JSON files. The files can be read back into Vertica using FJSONPARSER (parser) .

There are some limitations on the queries you can use in an export statement. See Query Restrictions .

You can export data stored in Vertica in ROS format and data from external tables.

This statement returns the number of rows written and logs information about exported files in a system table. See Monitoring exports .

During an export to HDFS or an NFS mount point, Vertica writes files to a temporary directory in the same location as the destination and renames the directory when the export is complete. Do not attempt to use the files in the temporary directory. During an export to S3, GCS, or Azure, Vertica writes files directly to the destination path, so you must wait for the export to finish before reading the files. For more information, see Exporting to object stores .

Syntax

```
EXPORT [ /*+LABEL (label)*/ ] TO JSON ( directory=path[, param=value [,...] ]
  [ OVER (over-clause ) ] AS SELECT query-expression
```

Parameters

LABEL

Assigns a label to a statement to identify it for profiling and debugging.

directory

The destination directory for the output files. The directory must not exist, and the current user must have permission to write it. The destination can be on any of the following file systems:

- HDFS file system
- S3 object store
- Google Cloud Storage (GCS) object store
- Azure Blob Storage object store
- Linux file system, either an NFS mount or local storage on each node

filename

If specified, all output is written to a single file of this name in the location specified by directory . While the query can be processed by multiple nodes, only a single node generates the output data. The fileSizeMB parameter is ignored, and the query cannot use partitioning in the OVER() clause.

omitNullFields

Boolean, whether to omit ROW fields with null values.

Default: false

compression

Compression type, one of:

- Uncompressed
- BZip
- GZip

Default: Uncompressed

fileSizeMB

The maximum file size of a single output file. This value is a hint, not a hard limit. A value of 0 specifies no limit. If filename is also specified, fileSizeMB is ignored.

This value affects the size of individual output files, not the total output size. For smaller values, Vertica divides the output into more files; all data is still exported.

Default: 10GB

fileMode

For writes to HDFS only, permission to apply to all exported files. You can specify the value in Unix octal format (such as 665) or *user - group - other* format—for example, rwxr-xr-x . The value must be formatted as a string even if using the octal format.
Valid octal values range between 0 and 1777 , inclusive. See HDFS Permissions in the Apache Hadoop documentation.

When writing files to any destination other than HDFS, this parameter has no effect.

Default: 660 , regardless of the value of fs.permissions.umask-mode in hdfs-site.xml .

dirMode

For writes to HDFS only, permission to apply to all exported directories. Values follow the same rules as those for *fileMode* . Further, you must give the Vertica HDFS user full permission, at least rwx------ or 700 .
When writing files to any destination other than HDFS, this parameter has no effect.

Default: 755 , regardless of the value of fs.permissions.umask-mode in hdfs-site.xml .

Arguments

over-clause

Specifies how to partition table data using PARTITION BY. Within partitions you can sort using ORDER BY. See SQL analytics . This clause may contain column references but not expressions.

If you partition data, Vertica creates a Hive-style partition directory structure, transforming column names to lowercase. See Using partition columns for a description of the directory structure. If you use the fileName parameter, you cannot use partitioning. Not all parsers can read partition columns as columns.
If you omit this clause, Vertica optimizes for maximum parallelism.

query-expression

Specifies the data to export. See Query Restrictions for important limitations.

Privileges

Non-superusers:

- Source table: SELECT
- Source table schema: USAGE
- Destination directory: Write

Query restrictions

The following requirements and restrictions apply:

- You must provide an alias column label for selected column targets that are expressions.
- The query can contain only a single outer SELECT statement. For example, you cannot use UNION:

```
=> EXPORT TO JSON(directory = '/mnt/shared_nfs/accounts/rm')
  OVER(PARTITION BY hash)
  AS
  SELECT 1 as account_id, '{}' as json, 0 hash
  UNION ALL
  SELECT 2 as account_id, '{}' as json, 1 hash;
ERROR 8975:  Only a single outer SELECT statement is supported
HINT:  Please use a subquery for multiple outer SELECT statements
```

Instead, rewrite the query to use a subquery:

```
=> EXPORT TO JSON(directory = '/mnt/shared_nfs/accounts/rm')
  OVER(PARTITION BY hash)
  AS
  SELECT
   account_id,
   json
  FROM
  (
    SELECT 1 as account_id, '{}' as json, 0 hash
    UNION ALL
    SELECT 2 as account_id, '{}' as json, 1 hash
  ) a;
 Rows Exported
---------------
             2
(1 row)
```

- To use composite statements such as UNION, INTERSECT, and EXCEPT, rewrite them as subqueries.

Data types

EXPORT TO JSON can export ARRAY and ROW types in any combination.

EXPORT TO JSON does not support binary output (VARBINARY).

Output

The export operation always creates an output directory, even if all output is written to a single file or the query produces zero rows.

Output file names follow the pattern: [*8-character-hash*]-[*nodename*]-[*thread-id*].json .

Column names in partition directories are lowercase.

Files exported to a local file system by any Vertica user are owned by the Vertica superuser. Files exported to HDFS or object stores are owned by the Vertica user who exported the data.

The following requirements and restrictions apply:

- Avoid concurrent exports to the same output destination. Doing so is an error on any file system and can produce incorrect results.
- Use a shared file location for output. If you use a directory in the local file system, it must be an NFS-mounted directory.
- For output to the local file system, you must have a USER storage location.
- When exporting to the local file system, the permission mode is 700 for directories and 600 for files. You cannot override these values.

For restrictions specific to object stores (S3, GCS, or Azure), see Exporting to object stores .

Examples

In the following example, one of the ROW elements has a null value, which is omitted in the output. EXPORT TO JSON writes each JSON record on one line; line breaks have been inserted into the following output for readability:

```
=> SELECT name, menu FROM restaurants;
      name       |                                menu

-----------------+-------------------------------------------------------------
-----------------
 Bob's pizzeria    | [{"item":"cheese pizza","price":null},{"item":"spinach pizza","price":10.5}]
 Bakersfield Tacos | [{"item":"veggie taco","price":9.95},{"item":"steak taco","price":10.95}]
(2 rows)

=> EXPORT TO JSON (directory='/output/json', omitNullFields=true)
   AS SELECT * FROM restaurants;
 Rows Exported
---------------
             2
(1 row)

=> \! cat /output/json/*.json
{"name":"Bob's pizzeria","cuisine":"Italian","location_city":["Cambridge","Pittsburgh"],
 "menu":[{"item":"cheese pizza"},{"item":"spinach pizza","price":10.5}]}
{"name":"Bakersfield Tacos","cuisine":"Mexican","location_city":["Pittsburgh"],
 "menu":[{"item":"veggie taco","price":9.95},{"item":"steak taco","price":10.95}]}
```

EXPORT TO ORC

Exports a table, columns from a table, or query results to files in the ORC format.

You can use an OVER() clause to partition the data before export. You can partition data instead of or in addition to exporting the column data. Partitioning data can improve query performance by enabling partition pruning. See Improving query performance .

There are some limitations on the queries you can use in an export statement. See Query Restrictions .

You can export data stored in Vertica in ROS format and data from external tables.

This statement returns the number of rows written and logs information about exported files in a system table. See Monitoring exports .

During an export to HDFS or an NFS mount point, Vertica writes files to a temporary directory in the same location as the destination and renames the directory when the export is complete. Do not attempt to use the files in the temporary directory. During an export to S3, GCS, or Azure, Vertica writes files directly to the destination path, so you must wait for the export to finish before reading the files. For more information, see Exporting to object stores .

Syntax

```
EXPORT [ /*+LABEL (label-string)*/ ] TO ORC ( directory=path[, param=value [,...] ] )
  [ OVER (over-clause ) ] AS SELECT query-expression
```

Parameters

LABEL

Assigns a label to a statement to identify it for profiling and debugging.

directory

The destination directory for the output files. The directory must not exist, and the current user must have permission to write it. The destination can be on any of the following file systems:

- HDFS file system
- S3 object store
- Google Cloud Storage (GCS) object store
- Azure Blob Storage object store
- Linux file system, either an NFS mount or local storage on each node

filename

If specified, all output is written to a single file of this name in the location specified by directory . While the query can be processed by multiple nodes, only a single node generates the output data. The fileSizeMB parameter is ignored, and the query cannot use partitioning in the OVER() clause.

compression

Column compression type, one of:

- Zlib
- Uncompressed

Default: Zlib

stripeSizeMB

The uncompressed size of exported stripes in MB, an integer value between 1 and 1024, inclusive.

Default: 250

rowIndexStride

Integer that specifies how frequently the exporter builds indexing statistics in the output, between 1 and 1000000 (1 million), inclusive. A value of 0 disables indexing. The exporter builds statistics after every rowIndexStride rows in each stripe, or once for stripes < rowIndexStride .

Default: 1000

fileSizeMB

The maximum file size of a single output file. This value is a hint, not a hard limit. A value of 0 specifies no limit. If filename is also specified, fileSizeMB is ignored.
This value affects the size of individual output files, not the total output size. For smaller values, Vertica divides the output into more files; all data is still exported.

Default: 10GB

fileMode

For writes to HDFS only, permission to apply to all exported files. You can specify the value in Unix octal format (such as 665) or *user - group - other* format—for example, rwxr-xr-x . The value must be formatted as a string even if using the octal format.
Valid octal values range between 0 and 1777 , inclusive. See HDFS Permissions in the Apache Hadoop documentation.

When writing files to any destination other than HDFS, this parameter has no effect.

Default: 660 , regardless of the value of fs.permissions.umask-mode in hdfs-site.xml .

dirMode

For writes to HDFS only, permission to apply to all exported directories. Values follow the same rules as those for *fileMode* . Further, you must give the Vertica HDFS user full permission, at least rwx------ or 700 .
When writing files to any destination other than HDFS, this parameter has no effect.

Default: 755 , regardless of the value of fs.permissions.umask-mode in hdfs-site.xml .

Arguments

over-clause

Specifies how to partition table data using PARTITION BY. Within partitions you can sort using ORDER BY. See SQL analytics . This clause may contain column references but not expressions.

If you partition data, Vertica creates a Hive-style partition directory structure, transforming column names to lowercase. See Using partition columns for a description of the directory structure. If you use the fileName parameter, you cannot use partitioning. Not all parsers can read partition columns as columns.
If you omit this clause, Vertica optimizes for maximum parallelism.

query-expression

Specifies the data to export. See Query Restrictions for important limitations.

Privileges

Non-superusers:

- Source table: SELECT
- Source table schema: USAGE

- Destination directory: Write

Query restrictions

You must provide an alias column label for selected column targets that are expressions.

The query can contain only a single outer SELECT statement. For example, you cannot use UNION as in the following example.

```
=> EXPORT TO ORC(directory = '/mnt/shared_nfs/accounts/rm')
  OVER(PARTITION BY hash)
  AS
  SELECT 1 as account_id, '{}' as json, 0 hash
  UNION ALL
  SELECT 2 as account_id, '{}' as json, 1 hash;
ERROR 8975:  Only a single outer SELECT statement is supported
HINT:  Please use a subquery for multiple outer SELECT statements
```

Instead, rewrite the query to use a subquery:

```
=> EXPORT TO ORC(directory = '/mnt/shared_nfs/accounts/rm')
  OVER(PARTITION BY hash)
  AS
  SELECT
   account_id,
   json
  FROM
  (
    SELECT 1 as account_id, '{}' as json, 0 hash
    UNION ALL
    SELECT 2 as account_id, '{}' as json, 1 hash
  ) a;
 Rows Exported
---------------
             2
(1 row)
```

To use composite statements such as UNION, INTERSECT, and EXCEPT, rewrite them as subqueries.

Data types

EXPORT TO ORC converts Vertica data types to Hive data types as shown in the following table.

Vertica Data Type	**Hive Data Type**
INTEGER BIGINT	BIGINT
FLOAT DECIMAL SMALLINT TINYIN CHAR BOOLEAN	Corresponding Hive type
VARCHAR LONG VARCHAR	VARCHAR (max 64KB) or STRING (can be read as either)
BINARY VARBINARY LONG VARBINARY	BINARY

DATE	DATE if supported by your version of Hive, otherwise INT96 (can be read as TIMESTAMP)
TIMESTAMP TIMESTAMPTZ	TIMESTAMP. Vertica does not convert TIMESTAMP values to UTC. To avoid problems arising from time zones, use TIMESTAMPTZ instead of TIMESTAMP.
TIME TIMEZ INTERVAL UUID	Not supported
ARRAY	ARRAY
SET ROW	Not supported

Decimal precision must be <= 38.

The exported Hive types might not be identical to the Vertica types. For example, a Vertica INT is exported as a Hive BIGINT. When defining Hive external tables to read exported data, you might have to adjust column definitions.

This operation exports raw Flex columns as binary data.

Output

The export operation always creates an output directory, even if all output is written to a single file or the query produces zero rows.

Output file names follow the pattern: [*8-character-hash*]-[*nodename*]-[*thread-id*].orc .

Column names in partition directories are lowercase.

Files exported to a local file system by any Vertica user are owned by the Vertica superuser. Files exported to HDFS or object stores are owned by the Vertica user who exported the data.

The following requirements and restrictions apply:

- Avoid concurrent exports to the same output destination. Doing so is an error on any file system and can produce incorrect results.
- Use a shared file location for output. If you use a directory in the local file system, it must be an NFS-mounted directory.
- For output to the local file system, you must have a USER storage location.
- When exporting to the local file system, the permission mode is 700 for directories and 600 for files. You cannot override these values.

For restrictions specific to object stores (S3, GCS, or Azure), see Exporting to object stores .

Examples

The following example demonstrates partitioning and exporting data. EXPORT TO ORC first partitions the data on region and then, within each partition, sorts by store.

```
=> EXPORT TO ORC(directory='gs://DataLake/user2/data')
 OVER(PARTITION BY store.region ORDER BY store.ID)
 AS SELECT sale.price, sale.date, store.ID
 FROM public.sales sale
 JOIN public.vendor store ON sale.distribID = store.ID;
```

For more examples, see EXPORT TO PARQUET , which (aside from a few parameters) behaves the same as EXPORT TO ORC.

EXPORT TO PARQUET

Exports a table, columns from a table, or query results to files in the Parquet format.

You can use an OVER() clause to partition the data before export. You can partition data instead of or in addition to exporting the column data. Partitioning data can improve query performance by enabling partition pruning. See Improving query performance .

There are some limitations on the queries you can use in an export statement. See Query Restrictions .

You can export data stored in Vertica in ROS format and data from external tables.

This statement returns the number of rows written and logs information about exported files in a system table. See Monitoring exports .

During an export to HDFS or an NFS mount point, Vertica writes files to a temporary directory in the same location as the destination and renames the directory when the export is complete. Do not attempt to use the files in the temporary directory. During an export to S3, GCS, or Azure, Vertica writes files directly to the destination path, so you must wait for the export to finish before reading the files. For more information, see Exporting to object stores .

After you export data, you can use the GET_METADATA function to inspect the results.

Syntax

```
EXPORT [ /*+LABEL (label-string)*/ ] TO PARQUET ( directory=path[, param=value [,...] ] )
  [ OVER (over-clause ) ] AS SELECT query-expression
```

Parameters

LABEL

Assigns a label to a statement to identify it for profiling and debugging.

directory

The destination directory for the output files. The directory must not exist, and the current user must have permission to write it. The destination can be on any of the following file systems:

- HDFS file system
- S3 object store
- Google Cloud Storage (GCS) object store
- Azure Blob Storage object store
- Linux file system, either an NFS mount or local storage on each node

filename

If specified, all output is written to a single file of this name in the location specified by directory . While the query can be processed by multiple nodes, only a single node generates the output data. The fileSizeMB parameter is ignored, and the query cannot use partitioning in the OVER() clause.

compression

Column compression type, one of:

- Snappy
- GZIP
- Brotli
- ZSTD
- Uncompressed

Default: Snappy

rowGroupSizeMB

The uncompressed size of exported row groups, in MB, an integer value between 1 and fileSizeMB , inclusive, or unlimited if fileSizeMB is 0.

The row groups in the exported files are smaller than this value because Parquet files are compressed on write. For best performance when exporting to HDFS, set *size* to be smaller than the HDFS block size.
Row-group size affects memory consumption during export. An export thread consumes at least double the row-group size. The default value of 512MB is a compromise between writing larger row groups and allowing enough free memory for other Vertica operations. If you perform exports when the database is not otherwise under heavy load, you can improve read performance on the exported data by increasing row-group size on export. However, row groups that span multiple blocks on HDFS decrease read performance by requiring more I/O, so do not set the row-group size to be larger than your HDFS block size.

Default: 512

fileSizeMB

The maximum file size of a single output file. This value is a hint, not a hard limit. A value of 0 specifies no limit. If filename is also specified, fileSizeMB is ignored.
This value affects the size of individual output files, not the total output size. For smaller values, Vertica divides the output into more files; all data is still exported.

Default: 10GB

fileMode

For writes to HDFS only, permission to apply to all exported files. You can specify the value in Unix octal format (such as 665) or *user - group - other* format—for example, rwxr-xr-x . The value must be formatted as a string even if using the octal format.
Valid octal values range between 0 and 1777 , inclusive. See HDFS Permissions in the Apache Hadoop documentation.

When writing files to any destination other than HDFS, this parameter has no effect.

Default: 660 , regardless of the value of fs.permissions.umask-mode in hdfs-site.xml .

dirMode

For writes to HDFS only, permission to apply to all exported directories. Values follow the same rules as those for *fileMode* . Further, you must give the Vertica HDFS user full permission, at least rwx------ or 700 .
When writing files to any destination other than HDFS, this parameter has no effect.

Default: 755 , regardless of the value of fs.permissions.umask-mode in hdfs-site.xml .

int96AsTimestamp

Boolean, specifies whether to export timestamps as int96 physical type (true) or int64 physical type (false).

Default: true

Arguments

over-clause

Specifies how to partition table data using PARTITION BY. Within partitions you can sort using ORDER BY. See SQL analytics . This clause may contain column references but not expressions.

If you partition data, Vertica creates a Hive-style partition directory structure, transforming column names to lowercase. See Using partition columns for a description of the directory structure. If you use the fileName parameter, you cannot use partitioning. Not all parsers can read partition columns as columns.
If you omit this clause, Vertica optimizes for maximum parallelism.

query-expression

Specifies the data to export. See Query Restrictions for important limitations.

Privileges

Non-superusers:

- Source table: SELECT
- Source table schema: USAGE
- Destination directory: Write

Query restrictions

You must provide an alias column label for selected column targets that are expressions.

The query can contain only a single outer SELECT statement. For example, you cannot use UNION as in the following example.

```
=> EXPORT TO PARQUET(directory = '/mnt/shared_nfs/accounts/rm')
  OVER(PARTITION BY hash)
  AS
  SELECT 1 as account_id, '{}' as json, 0 hash
  UNION ALL
  SELECT 2 as account_id, '{}' as json, 1 hash;
ERROR 8975:  Only a single outer SELECT statement is supported
HINT:  Please use a subquery for multiple outer SELECT statements
```

Instead, rewrite the query to use a subquery:

```
=> EXPORT TO PARQUET(directory = '/mnt/shared_nfs/accounts/rm')
  OVER(PARTITION BY hash)
  AS
  SELECT
   account_id,
   json
  FROM
  (
    SELECT 1 as account_id, '{}' as json, 0 hash
    UNION ALL
    SELECT 2 as account_id, '{}' as json, 1 hash
  ) a;
 Rows Exported
---------------
             2
(1 row)
```

To use composite statements such as UNION, INTERSECT, and EXCEPT, rewrite them as subqueries.

Data types

EXPORT TO PARQUET converts Vertica data types to Hive data types as shown in the following table.

Vertica Data Type	**Hive Data Type**
INTEGER, BIGINT	BIGINT
FLOAT, DECIMAL, SMALLINT, TINYINT, CHAR, BOOLEAN	Corresponding Hive type
VARCHAR, LONG VARCHAR	VARCHAR (max 64KB) or STRING (can be read as either)
BINARY, VARBINARY, LONG VARBINARY	BINARY
DATE	DATE if supported by your version of Hive, otherwise INT96 (can be read as TIMESTAMP)
TIMESTAMP, TIMESTAMPTZ	TIMESTAMP. Vertica does not convert TIMESTAMP values to UTC. To avoid problems arising from time zones, use TIMESTAMPTZ instead of TIMESTAMP.
TIME, TIMEZ, INTERVAL	Not supported
ARRAY	ARRAY
SET, ROW	Not supported

Decimal precision must be <= 38.

The exported Hive types might not be identical to the Vertica types. For example, a Vertica INT is exported as a Hive BIGINT. When defining Hive external tables to read exported data, you might have to adjust column definitions.

This operation exports raw Flex columns as binary data.

Output

The export operation always creates an output directory, even if all output is written to a single file or the query produces zero rows.

Output file names follow the pattern: [*8-character-hash*]-[*nodename*]-[*thread-id*].parquet .

Column names in partition directories are lowercase.

Files exported to a local file system by any Vertica user are owned by the Vertica superuser. Files exported to HDFS or object stores are owned by the Vertica user who exported the data.

The following requirements and restrictions apply:

- Avoid concurrent exports to the same output destination. Doing so is an error on any file system and can produce incorrect results.
- Use a shared file location for output. If you use a directory in the local file system, it must be an NFS-mounted directory.
- For output to the local file system, you must have a USER storage location.
- When exporting to the local file system, the permission mode is 700 for directories and 600 for files. You cannot override these values.

For restrictions specific to object stores (S3, GCS, or Azure), see Exporting to object stores .

Examples

The following example demonstrates exporting all columns from theT1 table in the public schema, using GZIP compression.

```
=> EXPORT TO PARQUET(directory='webhdfs:///user1/data', compression='gzip')
 AS SELECT * FROM public.T1;
```

The following example demonstrates exporting the results of a query using more than one table.

```
=> EXPORT TO PARQUET(directory='s3://DataLake/sales_by_region')
   AS SELECT sale.price, sale.date, store.region
   FROM public.sales sale
   JOIN public.vendor store ON sale.distribID = store.ID;
```

The following example demonstrates partitioning and exporting data. EXPORT TO PARQUET first partitions the data on region and then, within each partition, sorts by store.

```
=> EXPORT TO PARQUET(directory='gs://DataLake/user2/data')
 OVER(PARTITION BY store.region ORDER BY store.ID)
 AS SELECT sale.price, sale.date, store.ID
 FROM public.sales sale
 JOIN public.vendor store ON sale.distribID = store.ID;
```

The following example uses an alias column label for a selected column target that is an expression.

```
=> EXPORT TO PARQUET(directory='webhdfs:///user3/data')
 OVER(ORDER BY col1) AS SELECT col1 + col1 AS A, col2
 FROM public.T3;
```

The following example sets permissions for the output.

```
=> EXPORT TO PARQUET(directory='webhdfs:///user1/data',
    fileMode='432', dirMode='rwxrw-r-x')
 AS SELECT * FROM public.T1;
```

EXPORT TO VERTICA

Exports table data from one Vertica database to another.

Important

The source database must be no more than one major release behind the target database.

Syntax

```
EXPORT [ /*+LABEL (label-string)*/ ] TO VERTICA
   database.[schema.]target-table [ ( target-columns ) ]
   { AS SELECT query-expression | FROM [`*`schema`*`.]source-table[ ( source-columns ) ] }
```

Parameters

LABEL

Assigns a label to a statement to identify it for profiling and debugging.

*** database ***

The target database of the data to export. A connection to this database must already exist in the current session before starting the copy operation; otherwise Vertica returns an error. For details, see CONNECT TO VERTICA .

[*schema.*] *target-table*

The table in *database* to store the exported data. The table cannot have columns of complex data types other than native arrays.

*** target-columns ***

A comma-delimited list of columns in *target-table* in which to store the exported data.See Mapping Between Source and Target Columns , below.

*** query-expression ***

The data to export.

[*schema.*] *source-table*

The table that contains the data to export.

*** source-columns ***

A comma-delimited list of the columns in the source table to export. The table cannot have columns of complex data types.See Mapping Between Source and Target Columns , below.

Privileges

Non-superusers:

- Source table: SELECT
- Source table schema: USAGE
- Target table: INSERT
- Target table schema: USAGE

Mapping between source and target columns

If you export all table data from one database to another, EXPORT TO VERTICA can omit specifying column lists if column definitions in both tables comply with the following conditions:

- Same number of columns
- Identical column names
- Same sequence of columns
- Matching or compatible column data types
- No complex data types (ARRAY, SET, or ROW), except for native arrays

If any of these conditions is not true, the EXPORT TO VERTICA statement must include column lists that explicitly map source and target columns to each other, as follows:

- Contain the same number of columns.
- List source and target columns in the same order.
- Pair columns with the same (or compatible) data types.

Examples

See Exporting data to another database .

See also

- Handling node failure during copy/export
- COPY FROM VERTICA

GET DIRECTED QUERY

Queries system table DIRECTED_QUERIES on the specified input query, and returns details of all directed queries that map to the input query. For details about output, see Getting directed queries .

Syntax

```
GET DIRECTED QUERY input-query
```

Parameters

*** input-query ***

An input query that is associated with one or more directed queries.

Privileges

None

Examples

See Getting directed queries .

GRANT statements

GRANT statements grant privileges on database objects to users and roles .

Important

In a database with trust authentication, GRANT statements appear to work as expected but have no real effect on database security.

In this section

- GRANT (authentication)
- GRANT (database)
- GRANT (library)
- GRANT (model)
- GRANT (procedure)
- GRANT (Resource pool)
- GRANT (Role)
- GRANT (schema)
- GRANT (sequence)
- GRANT (storage location)
- GRANT (table)
- GRANT (TLS configuration)
- GRANT (user defined extension)
- GRANT (view)

GRANT (authentication)

Associates an authentication record to one or more users and roles .

Syntax

```
GRANT AUTHENTICATION auth-method-name TO grantee[,...]
```

Parameters

auth-method-name

Name of the authentication method to associate with one or more users or roles.

grantee

Specifies who is associated with the authentication method, one of the following:

- User name
- Role
- PUBLIC : The default role of all users.

Privileges

Superuser

Examples

- Associate v_ldap authentication with user jsmith :

```
=> GRANT AUTHENTICATION v_ldap TO jsmith;
```

- Associate v_gss authentication to the role DBprogrammer :

```

=> CREATE ROLE DBprogrammer;
=> GRANT AUTHENTICATION v_gss TO DBprogrammer;
```

- Associate client authentication method v_localpwd with role PUBLIC , which is assigned by default to all users:

```
=> GRANT AUTHENTICATION v_localpwd TO PUBLIC;
```

See also

- REVOKE (authentication)
- Granting and revoking privileges

GRANT (database)

Grants database privileges to users and roles .

Syntax

```
GRANT { privilege[,...] | ALL [ PRIVILEGES ] }
  ON DATABASE db-spec
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

privilege

The following privileges are valid for a database:

- CREATE : Create schemas.
- TEMP : Create temporary tables. By default, all users are granted this privilege through their DEFAULT role.

ALL [PRIVILEGES]

Grants all database privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

*** db-spec ***

Specifies the current database, set to the database name or DEFAULT .

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superuser: Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

The following example grants user Fred the right to create schemas in the current database.

```
=> GRANT CREATE ON DATABASE DEFAULT TO Fred;
```

See also

- REVOKE (database)
- Granting and revoking privileges

GRANT (library)

Grants privileges on one or more libraries to users and roles .

For example, when working with the Connector Framework Service, you might need to grant a user usage privileges to a library to be able to set UDSession parameters. For more information see Implementing CFS .

Syntax

```
GRANT privilege
  ON LIBRARY [[database.]schema.]library[,...]
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Arguments

privilege

Privilege to grant, one of:

- USAGE : Grants access to functions in the specified libraries.
- DROP : Grants permission to drop libraries that the grantee created.
- ALL [PRIVILEGES] [EXTEND] : Grants all library privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack.

You can qualify ALL with two optional keywords:

- PRIVILEGES conforms with the SQL standard.
- EXTEND extends the semantics of ALL to include DROP privileges. An unqualified ALL excludes this privilege. This option enables backward compatibility with GRANT ALL usage in pre-9.2.1 Vertica releases.

Important
To execute functions inside the library, users must also have separate EXECUTE privileges on them, and USAGE privileges on their respective schemas.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

library

The target library.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superusers require USAGE on the schema and one of the following:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

Grant USAGE privileges on the MyFunctions library to Fred :

```
=> GRANT USAGE ON LIBRARY MyFunctions TO Fred;
```

See also

- REVOKE (library)
- Granting and revoking privileges

GRANT (model)

Grants usage privileges on a model to users and roles .

Syntax

```
GRANT { privilege[,...] | ALL [ PRIVILEGES ] [ EXTEND ] }
  ON MODEL [[database.]schema.]model-name[,...]
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

privilege

The following privileges are valid for models:

- USAGE
- ALTER
- DROP

ALL [PRIVILEGES][EXTEND]

Grants all model privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack.

You can qualify ALL with two optional keywords:

- PRIVILEGES conforms with the SQL standard.

- EXTEND extends the semantics of ALL to include ALTER and DROP privileges. An unqualified ALL excludes these two privileges. This option enables backward compatibility with GRANT ALL usage in pre-9.2.1 Vertica releases.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

model-name

The model on which to grant the privilege.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superusers require USAGE on the schema and one of the following:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

This example grants USAGE privileges on the mySvmClassModel model to user1:

```
=> GRANT USAGE ON MODEL mySvmClassModel TO user1;
```

See also

- REVOKE (model)
- Managing model security

GRANT (procedure)

Grants privileges on a stored procedure or external procedure to a user or role .

Important

External procedures that you create with CREATE PROCEDURE (external) are always run with Linux dbadmin privileges. If a dbadmin or pseudosuperuser grants a non-dbadmin permission to run a procedure using GRANT (procedure) , be aware that the non-dbadmin user runs the procedure with full Linux dbadmin privileges.

Syntax

```
GRANT { EXECUTE | ALL [ PRIVILEGES ] }
  ON PROCEDURE [[database.]schema.]procedure( [arg-list] )[,...]
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

EXECUTE

Enables grantees to run the specified *procedure* .

ALL [PRIVILEGES]

Grants all procedure privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

procedure

The target procedure.

arg-list

A comma-delimited list of procedure arguments, where each argument is specified as follows:

```
[ argname ] argtype
```

If the procedure is defined with no arguments, supply an empty argument list.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superuser, one of the following:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles

Examples

Grant EXECUTE privileges on the tokenize procedure to users Bob and Jules , and to the role Operator :

```
=> GRANT EXECUTE ON PROCEDURE tokenize(varchar) TO Bob, Jules, Operator;
```

See also

- REVOKE (procedure)
- Granting and revoking privileges

GRANT (Resource pool)

Grants USAGE privileges on resource pools to users and roles . Users can access their resource pools with ALTER USER or SET SESSION RESOURCE POOL .

Syntax

```
GRANT USAGE
  ON RESOURCE POOL resource-pool[,...]
  [FOR SUBCLUSTER subcluster | FOR CURRENT SUBCLUSTER]
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

USAGE

Enables grantees to acess the specified resource pools.

ALL [PRIVILEGES]

Grants all resource pool privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

resource-pool

A resource pool on which to grant the specified privileges.

subcluster

The subcluster for the resource pool.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

Grant user Joe USAGE privileges on resource pool Joe_pool .

```
=> CREATE USER Joe;
CREATE USER
=> CREATE RESOURCE POOL Joe_pool;
CREATE RESOURCE POOL
=> GRANT USAGE ON RESOURCE POOL Joe_pool TO Joe;
GRANT PRIVILEGE
```

Grant user Joe USAGE privileges on resource pool Joe_pool for subcluster sub1 .

```
=> GRANT USAGE on RESOURCE POOL Joe_pool FOR SUBCLUSTER sub1 TO Joe;
GRANT PRIVILEGE
```

See also

- REVOKE (Resource pool)
- Granting and revoking privileges

GRANT (Role)

Assigns roles to users or other roles .

> **Note**
> Granting a role does not activate the role automatically; you must enable it with the SET ROLE statement or specify it as a default role to enable it automatically.

Syntax

```
GRANT role[,...] TO grantee[,...] [ WITH ADMIN OPTION ]
```

Arguments

role

A role to grant

grantee

User or role to be granted the specified roles, one of the following:

- User name
- Role
- PUBLIC : The default role of all users.

WITH ADMIN OPTION

Gives *grantee* the privilege to grant the specified roles to other users or roles. For details, see Granting privileges .

Privileges

Non-superuser: If WITH GRANT OPTION is used, can grant the same roles to other users or roles.

Examples

See Granting database roles .

See also

REVOKE (Role)

GRANT (schema)

Grants schema privileges to users and roles . By default, only superusers and the schema owner have the following schema privileges:

- Create objects within a schema.
- Alter and drop a schema.

> **Note**
> By default, new users cannot access schema PUBLIC. You must explicitly grant all new users USAGE privileges on the PUBLIC schema.

Syntax

```
GRANT { privilege[,...] | ALL [ PRIVILEGES ] [ EXTEND ] }
  ON SCHEMA [database.]schema[,...]
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

*** privilege ***

One of the following privileges:

- USAGE: Enables access to objects in the specified schemas. Grantees can then be granted privileges on individual objects in these schemas in order to access them, for example, with GRANT TABLE and GRANT VIEW .
- CREATE: Create and rename objects in the specified schemas, and move objects from other schemas.

You can also grant the following privileges on a schema, to be inherited by tables and their projections, and by views of that schema. If inheritance is enabled for the database and schema , these privileges are automatically granted to those objects on creation:

- SELECT: Query tables and views. SELECT privileges are granted by default to the PUBLIC role.
- INSERT: Insert rows, or and load data into tables with COPY .

> **Note**
> COPY FROM STDIN is allowed for users with INSERT privileges, while COPY FROM *file* requires admin privileges.

- UPDATE: Update table rows.
- DELETE: Delete table rows.
- REFERENCES: Create foreign key constraints on this table. This privilege must be set on both referencing and referenced tables.
- TRUNCATE: Truncate table contents. Non-owners of tables can also execute the following partition operations on them:
  - DROP_PARTITIONS
  - SWAP_PARTITIONS_BETWEEN_TABLES
  - MOVE_PARTITIONS_TO_TABLE
- ALTER: Modify the DDL of tables and views with ALTER TABLE and ALTER VIEW , respectively.
- DROP: Drop tables and views.

ALL [PRIVILEGES][EXTEND]

Grants USAGE AND CREATE privileges. Inherited privileges must be granted explicitly.

You can qualify ALL with two optional keywords:

- PRIVILEGES conforms with the SQL standard.
- EXTEND extends the semantics of ALL to include ALTER and DROP privileges. An unqualified ALL excludes these two privileges. This option enables backward compatibility with GRANT ALL usage in pre-9.2.1 Vertica releases.

[*database* .] *schema*

Specifies a target schema. If you specify a database, it must be the current database.

*** grantee ***

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superusers, one of the following:

- Schema owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

Grant user Joe USAGE privilege on schema online_sales .

```
=> CREATE USER Joe;
CREATE USER
=> GRANT USAGE ON SCHEMA online_sales TO Joe;
GRANT PRIVILEGE
```

See also

- REVOKE (schema)
- Granting and revoking privileges

GRANT (sequence)

Grants sequence privileges to users and roles .

Syntax

```
GRANT { privilege[,...] | ALL [ PRIVILEGES ] [ EXTEND ] }
  ON {
    SEQUENCE [[database.]schema.]sequence[,...]
    | ALL SEQUENCES IN SCHEMA [database.]schema[,...] }
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

privilege

The following privileges are valid for sequences:

- SELECT: Execute functions CURRVAL and NEXTVAL on the specified sequences.
- ALTER: Modify a sequence's DDL with ALTER SEQUENCE
- DROP: Drop this sequence with DROP SEQUENCE .

ALL [PRIVILEGES][EXTEND]

Grants all sequence privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack

You can qualify ALL with two optional keywords:

- PRIVILEGES conforms with the SQL standard.
- EXTEND extends the semantics of ALL to include ALTER and DROP privileges. An unqualified ALL excludes these two privileges. This option enables backward compatibility with GRANT ALL usage in pre-9.2.1 Vertica releases.

[*database.*] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

SEQUENCE *sequence*

Specifies the sequence on which to grant privileges.

ALL SEQUENCES IN SCHEMA *schema*

Grants the specified privileges on all sequences in schema *schema* .

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superusers require USAGE on the schema and one of the following:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

This example shows how to grant user Joe all privileges on sequence my_seq .

```
=> CREATE SEQUENCE my_seq START 100;
CREATE SEQUENCE
=> GRANT ALL PRIVILEGES ON SEQUENCE my_seq TO Joe;
GRANT PRIVILEGE
```

See also

- REVOKE (sequence)
- Granting and revoking privileges

GRANT (storage location)

Grants privileges to users and roles on a USER-defined storage location. For details, see Creating storage locations .

Syntax

```
GRANT { privilege[,...] | ALL [ PRIVILEGES ] }
  ON LOCATION 'path' [ ON node ]
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

privilege

The following privileges are valid for storage locations:

- READ : Copy data from files in the storage location into a table.
- WRITE : Export data from the database to the storage location. With WRITE privileges, grantees can also save COPY statement rejected data and exceptions files to the storage location.

ALL [PRIVILEGES]

Grants all storage location privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

ON LOCATION ' *path* ' [ON *node*]

Specifies the path name mount point of the storage location. If qualified by ON NODE , Vertica grants access to the storage location residing on *node* .

If no node is specified, the grant operation applies to all nodes on the specified path. All nodes must be on the specified path; otherwise, the entire grant operation rolls back.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

> **Note**
> Only a superuser can add, alter, retire, drop, and restore a location.

Examples

Create a storage location:

```
=> CREATE LOCATION '/home/dbadmin/UserStorage/BobStore' NODE 'v_mcdb_node0007' USAGE 'USER';
CREATE LOCATION
```

Grant user Bob all available privileges to the /BobStore location:

```
=> GRANT ALL ON LOCATION '/home/dbadmin/UserStorage/BobStore' TO Bob;
GRANT PRIVILEGE
```

Revoke all storage location privileges from Bob:

```
=> REVOKE ALL ON LOCATION '/home/dbadmin/UserStorage/BobStore' FROM Bob;
REVOKE PRIVILEGE
```

Grant privileges to Bob on the BobStore location again, specifying a node:

```
=> GRANT ALL ON LOCATION '/home/dbadmin/UserStorage/BobStore' ON v_mcdb_node0007 TO Bob;
GRANT PRIVILEGE
```

Revoke all storage location privileges from Bob :

```
=> REVOKE ALL ON LOCATION '/home/dbadmin/UserStorage/BobStore' ON v_mcdb_node0007 FROM Bob;
REVOKE PRIVILEGE
```

See also

- Storage management functions
- REVOKE (storage location)
- Granting and revoking privileges

GRANT (table)

Grants table privileges to users and roles . Users must also be granted USAGE on the table schema .

Syntax

```
GRANT { privilege[,...] | ALL [ PRIVILEGES ] [ EXTEND ] }
  ON {
    [ TABLE ] [[database.]schema.]table[,...]
    | ALL TABLES IN SCHEMA [database.]schema[,...] }
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

privilege

The following privileges are valid for tables:

Important

Only SELECT privileges are valid for system tables.

- SELECT: Quer y tables. SELECT privileges are granted by default to the PUBLIC role.
- INSERT: Insert table rows with INSERT , and load data with COPY .

> **Note**
> COPY FROM STDIN is allowed for users with INSERT privileges, while COPY FROM *file* requires admin privileges.

- UPDATE: Update table rows.
- DELETE: Delete table rows.

- REFERENCES: Create foreign key constraints on this table. This privilege must be set on both referencing and referenced tables.
- TRUNCATE: Truncate table contents. Non-owners of tables can also execute the following partition operations on them:
  - DROP_PARTITIONS
  - SWAP_PARTITIONS_BETWEEN_TABLES
  - MOVE_PARTITIONS_TO_TABLE
- ALTER: Modify a table's DDL with ALTER TABLE .
- DROP: Drop a table .

ALL [PRIVILEGES][EXTEND]

Invalid for system tables, grants all table privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack.

You can qualify ALL with two optional keywords:

- PRIVILEGES conforms with the SQL standard.
- EXTEND extends the semantics of ALL to include ALTER and DROP privileges. An unqualified ALL excludes these two privileges. This option enables backward compatibility with GRANT ALL usage in pre-9.2.1 Vertica releases.

[*database.*] *schema*

Specifies a schema , by default public . If *schema* is any schema other than public , you must supply the schema name. For example:

```
myschema.thisDbObject
```

One exception applies: you can specify system tables without their schema name.
If you specify a database, it must be the current database.

TABLE *table*

Specifies the table on which to grant privileges.

> **Note**
> The table can be a global temporary table, but not a local temporary table. See Creating temporary tables .

ON ALL TABLES IN SCHEMA *schema*

Grants the specified privileges on all tables and views in schema *schema* .

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superusers require USAGE on the schema and one of the following:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

Grant user Joe all privileges on table customer_dimension :

```
=> CREATE USER Joe;
CREATE USER
=> GRANT ALL PRIVILEGES ON TABLE customer_dimension TO Joe;
GRANT PRIVILEGE
```

Grant user Joe SELECT privileges on all system tables:

```
=> GRANT SELECT on all tables in schema V_MONITOR, V_CATALOG TO Joe;
GRANT PRIVILEGE
```

See also

- REVOKE (table)
- Granting and revoking privileges

GRANT (TLS configuration)

Grants privileges on a TLS CONFIGURATION to a user or role.

To revoke granted privileges, see GRANT (TLS configuration) .

Syntax

```
GRANT { privilege[,...] } ON TLS CONFIGURATION
  tls_configuration[,...]
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

privilege

The privilege to grant. Currently, the only supported privilege is ALTER , which allows the grantee to add or remove certificates, change the TLSMODE, etc.

tls_configuration

The target TLS CONFIGURATION.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superuser:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

You can grant ALTER on a TLS CONFIGURATION to a user or role to delegate management of that TLS context, which includes adding and removing certificates, setting the TLSMODE, etc. For example, the following statement grants ALTER privileges on the TLS CONFIGURATION server to the role client_server_tls_manager :

```
=> GRANT ALTER ON TLS CONFIGURATION server TO client_server_tls_manager;
```

GRANT (user defined extension)

Grants privileges on a user-defined extensions (UDx) to users and roles .

Syntax

```
GRANT { privilege[,...] | ALL [ PRIVILEGES ] [ EXTEND ] }
  ON {
     UDx-type [[database.]schema.]function( [arg-list] )[,...]
     | ALL FUNCTIONS IN SCHEMA schema[,...] }
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Arguments

privilege

The following privileges are valid for user-defined extensions:

- EXECUTE

- ALTER
- DROP

> **Note**
> Users can only call a UDx function on which they have EXECUTE privilege, and USAGE privilege on its schema.

ALL [PRIVILEGES] [EXTEND]

Grants all function privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack

You can qualify ALL with two optional keywords:

- PRIVILEGES conforms with the SQL standard.
- EXTEND extends the semantics of ALL to include ALTER and DROP privileges. An unqualified ALL excludes these two privileges. This option enables backward compatibility with GRANT ALL usage in pre-9.2.1 Vertica releases.

ON *UDx-type*

Type of the user-defined extension (UDx), one of the following:

- FUNCTION (scalar function)
- AGGREGATE FUNCTION
- ANALYTIC FUNCTION
- TRANSFORM FUNCTION
- FILTER
- PARSER
- SOURCE

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

function

Name of the user-defined function on which to grant privileges.

ON ALL FUNCTIONS IN SCHEMA *schema*

Grants privileges on all functions in the specified schema.

arg-list

Required for all polymorphic functions, a comma-delimited list of function arguments, where each argument is specified as follows:

```
[ argname ] argtype
```

If the procedure is defined with no arguments, supply an empty argument list.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

> **Note**
> Grantees must have USAGE privileges on the schema.

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superusers require USAGE on the schema and one of the following:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

Grant EXECUTE privileges on the myzeroifnull SQL function to users Bob and Jules , and to the role Operator . The function takes one integer argument:

```
=> GRANT EXECUTE ON FUNCTION myzeroifnull (x INT) TO Bob, Jules, Operator;
```

Grant EXECUTE privileges on all functions in the zero-schema schema to user Bob :

```
=> GRANT EXECUTE ON ALL FUNCTIONS IN SCHEMA zero-schema TO Bob;
```

Grant EXECUTE privileges on the tokenize transform function to user Bob and the role Operator :

```
=> GRANT EXECUTE ON TRANSFORM FUNCTION tokenize(VARCHAR) TO Bob, Operator;
```

Grant EXECUTE privileges on the ExampleSource() source to user Alice :

```
=> CREATE USER Alice;
=> GRANT USAGE ON SCHEMA hdfs TO Alice;
=> GRANT EXECUTE ON SOURCE ExampleSource() TO Alice;
```

Grant all privileges on the ExampleSource() source to user Alice :

```
=> GRANT ALL ON SOURCE ExampleSource() TO Alice;
```

Grant all privileges on polymorphic function Pagerank to the dbadmin role:

```
=> GRANT ALL ON TRANSFORM FUNCTION Pagerank(z varchar) to dbadmin;
```

See also

- REVOKE (user defined extension)
- Granting and revoking privileges
- Developing user-defined extensions (UDxs)

GRANT (view)

Grants view privileges to users and roles .

Syntax

```
GRANT { privilege[,...] | ALL [ PRIVILEGES ] [ EXTEND ] }
  ON [[database.]schema.]view[,...]
  TO grantee[,...]
  [ WITH GRANT OPTION ]
```

Parameters

privilege

The following privileges are valid for views:

- SELECT
- ALTER
- DROP

ALL [PRIVILEGES][EXTEND]

Grants all view privileges that also belong to the grantor. Grantors cannot grant privileges that they themselves lack.

You can qualify ALL with two optional keywords:

- PRIVILEGES conforms with the SQL standard.
- EXTEND extends the semantics of ALL to include ALTER and DROP privileges. An unqualified ALL excludes these two privileges. This option enables backward compatibility with GRANT ALL usage in pre-9.2.1 Vertica releases.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

view

The target view.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

WITH GRANT OPTION

Gives *grantee* the privilege to grant the same privileges to other users or roles, and also revoke them. For details, see Granting privileges .

Privileges

Non-superusers require USAGE on the schema and one of the following:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

> **Note**
> As view owner, you can grant other users SELECT privilege on the view only if one of the following is true:
>
> - You own the view's base table.
> - You have SELECT...WITH GRANT OPTION privilege on the view's base table.

Examples

Grant user Joe all privileges on view ship .

```
=> CREATE VIEW ship AS SELECT * FROM public.shipping_dimension;
CREATE VIEW
=> GRANT ALL PRIVILEGES ON ship TO Joe;
GRANT PRIVILEGE
```

See also

REVOKE (view)

INSERT

Inserts values into all projections of the specified table. You must insert one complete tuple at a time. If no projections are associated with the target table, Vertica creates a superprojection to store the inserted values.

INSERT works for flex tables as well as regular native tables. If the table has real columns, inserted data of scalar types and native arrays of scalar types is added to both the real column and the __raw__ column. For data of complex types , the values are not added to the __raw__ column.

Syntax

```
INSERT [ /*+LABEL (label-string)*/ ] INTO [[database.]schema.]table-name
   [ ( column-list ) ]
   { DEFAULT VALUES | VALUES ( values-list )[,...] | SELECT query-expression }
```

Parameters

LABEL

Assigns a label to a statement to identify it for profiling and debugging.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** table-name ***

The target table. You cannot invoke INSERT on a projection.

*** column-list ***

A comma-delimited list of one or more target columns in this table, listed in any order. VALUES clause values are mapped to columns in the same order. If you omit this list, Vertica maps VALUES clause values to columns according to column order in the table definition.

A list of target columns is invalid with DEFAULT VALUES .

DEFAULT VALUES

Fills all columns with their default values as specified in the table definition. If no default value is specified for a column, Vertica inserts a NULL

value.

You cannot specify a list of target columns with this option.

VALUES (*values-list*)

A comma-delimited list of one or more values to insert in the target columns, where each value is one of the following:

- *expression* resolves to a value to insert in the target column. The expression must not nest other expressions, include Vertica meta-functions , or use mixed complex types. Values may include native array or ROW types if Vertica can coerce the element or field types.
- DEFAULT inserts the default value as specified in the table definition.

If no value is supplied for a column, Vertica implicitly adds a DEFAULT value, if defined. Otherwise Vertica inserts a NULL value. If the column is defined as NOT NULL , INSERT returns an error.
You can use INSERT to insert multiple rows in the target table, by specifying multiple comma-delimited VALUES lists:

```
INSERT INTO table-name
  VALUES ( values-list ), ( values-list )[,...]
```

For details, see Multi-Row INSERT below.

SELECT *query-expression*

A query that returns the rows to insert. Isolation level applies only to the SELECT clauses and works like any query. Restrictions on use of complex types apply as in other queries.

Privileges

- Table owner or user with GRANT OPTION is grantor
- INSERT privilege on table
- USAGE privilege on schema that contains the table

Committing successive table changes

Vertica follows the SQL-92 transaction model, so successive INSERT, UPDATE, and DELETE statements are included in the same transaction. You do not need to explicitly start this transaction; however, you must explicitly end it with COMMIT , or implicitly end it with COPY . Otherwise, Vertica discards all changes that were made within the transaction.

Multi-row INSERT

You can use INSERT to insert multiple rows in the target table, by specifying multiple comma-delimited VALUES lists. For example:

```
=> CREATE TABLE public.t1(a int, b int, c varchar(16));
CREATE TABLE
=> INSERT INTO t1 VALUES (1,2, 'un, deux'), (3,4, 'trois, quatre');
 OUTPUT
--------
      2
(1 row)

=> COMMIT;
COMMIT
=> SELECT * FROM t1;
 a | b |       c
---+---+---------------
 1 | 2 | un, deux
 3 | 4 | trois, quatre
(4 rows)
```

Restrictions

- Vertica does not support subqueries as the target of an INSERT statement.
- Restrictions on the use of complex types in SELECT statements apply equally to INSERT . Using complex values that cannot be coerced to the column type results in an error.
- If primary key, unique key, or check constraints are enabled for automatic enforcement in the target table, Vertica enforces those constraints when you load new data. If a violation occurs, Vertica rolls back the operation and returns an error.

Examples

```
=> INSERT INTO t1 VALUES (101, 102, 103, 104);
=> INSERT INTO customer VALUES (10, 'male', 'DPR', 'MA', 35);
=> INSERT INTO start_time VALUES (12, 'film','05:10:00:01');
=> INSERT INTO retail.t1 (C0, C1) VALUES (1, 1001);
=> INSERT INTO films SELECT * FROM tmp_films WHERE date_prod < '2004-05-07';
```

Vertica does not support subqueries or nested expressions as the target of an INSERT statement. For example, the following query returns an error message:

```
=> INSERT INTO t1 (col1, col2) VALUES ('abc', (SELECT mycolumn FROM mytable));
ERROR 4821:  Subqueries not allowed in target of insert
```

You can rewrite the above query as follows:

```
=> INSERT INTO t1 (col1, col2) (SELECT 'abc', mycolumn FROM mytable);
 OUTPUT
--------
      0
(1 row)
```

The following example shows how to use INSERT...VALUES with flex tables:

```
=> CREATE FLEX TABLE flex1();
 CREATE TABLE
=> INSERT INTO flex1(a,b) VALUES (1, 'x');
 OUTPUT
--------
      1
(1 row)

=> SELECT MapToString(__raw__) FROM flex1;
          MapToString
-----------------------------------
{
"a" : "1",
"b" : "x"
}
(1 row)
```

The following example shows how to use INSERT...SELECT with flex tables:

```
=> CREATE FLEX TABLE flex2();
 CREATE TABLE
=> INSERT INTO flex2(a, b) SELECT a, b, '2016-08-10 11:10' c, 'Hello' d, 3.1415 e, f from flex1;
 OUTPUT
--------
      1
(1 row)

=> SELECT MapToString(__raw__) FROM flex2;
          MapToString
-----------------------------------
{
"a" : "1",
"b" : "x",
"c" : "2016-08-10",
"d" : "Hello",
"e" : 3.1415,
"f" : null
}
(1 row)
```

The following examples use complex types:

```
=> CREATE TABLE inventory(storeID INT, product ROW(name VARCHAR, code VARCHAR));
CREATE TABLE

--- LookUpProducts() returns a row(varchar, int), which is cast to row(varchar, varchar):
=> INSERT INTO inventory(product) SELECT LookUpProducts();
 OUTPUT
--------
      5
(1 row)

--- Cannot use with select...values:
=> INSERT INTO inventory(product) VALUES(LookUpProducts());
ERROR 2631:  Column "product" is of type "row(varchar,varchar)" but expression is of type "row(varchar,int)"

--- Literal values are supported:
=> INSERT INTO inventory(product) VALUES(ROW('xbox',165));
 OUTPUT
--------
      1
(1 row)

=> SELECT product FROM inventory;
          product
------------------------------
 {"name":"xbox","code":"125"}
(1 row)
```

LOCK TABLE

Locks a table, giving the caller's session exclusive access to certain operations. Tables are automatically unlocked after the current transaction ends (that is, after COMMIT or ROLLBACK).

LOCK TABLE can be useful for preventing deadlocks. For details, see Deadlocks .

To view existing locks, see LOCKS .

> **Note**
> READ COMMITTED isolation (default) and SERIALIZABLE isolation automatically handle locks for you, and the vast majority of users can rely on them exclusively; LOCK TABLE is only for advanced users who need granular control over locks for more complex workloads.
>
> To implement pessimistic concurrency without manually locking tables, you can use SELECT...FOR UPDATE to acquire an EXCLUSIVE (X) lock on the table.

Syntax

```
LOCK [ TABLE ] [[database.]schema.] table [,...]
   IN { lock_type } MODE
   [ NOWAIT ]
```

Parameters

[[database .] schema .]

Database and schema . The default schema is public . If you specify a database, it must be the current database.

table

The table to lock.

lock_type

The type of lock , one of the following:

- SHARE
- INSERT
- INSERT VALIDATE

- SHARE INSERT
- EXCLUSIVE
- NOT DELETE
- USAGE
- OWNER

[NOWAIT]

If specified, LOCK TABLE returns and reports an error immediately if it cannot acquire the lock. Otherwise, LOCK TABLE waits for incompatible locks to be released by their respective sessions, returning an error if the lock is not released after a certain amount of time, as defined by LockTimeout .

Privileges

Required privileges depend on the type of lock requested:

Lock	**Privileges**
SHARED (S)	SELECT
INSERT (I)	INSERT
SHARE INSERT	SELECT, INSERT
INSERT VALIDATE (IV)	SELECT, INSERT
EXCLUSIVE (X)	UPDATE, DELETE
NOT DELETE (T)	SELECT
USAGE	All privileges
Owner	All privileges

Examples

See Lock examples .

MERGE

Performs update and insert operations on a target table based on the results of a join with another data set, such as a table or view. The join can match a source row with only one target row; otherwise, Vertica returns an error.

The target table cannot have columns of complex data types. The source table can, so long as those columns are not included in the merge operation.

Syntax

```
MERGE [ /*+LABEL (label-string)*/ ]
  INTO [[database.]schema.]target-table [ [AS] alias ]
  USING source-dataset
  ON  join-condition matching-clause[ matching-clause ]
```

Returns

Number of target table rows updated or inserted

Parameters

LABEL

Assigns a label to a statement to identify it for profiling and debugging.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** target-table ***

The table on which to perform update and insert operations. MERGE takes an X (exclusive) lock on the target table during the operation. The table must not contain columns of complex types.

Important
The total number of target table columns cannot exceed 831.

source-dataset

The data to join to *target-table* , one of the following:

- [[*database* .] *schema.*] *table* [[AS] *alias*]
- [[*database* .] *schema.*] *view* [[AS] *alias*]
- (*subquery*) *sq-alias*

The specified data set typically supplies the data used to update the target table and populate new rows. You can specify an external table.

ON *join-condition*

The conditions on which to join the target table and source data set.

> **Tip**
> The Vertica query optimizer can create an optimized query plan for a MERGE statement only if the target table join column has a unique or primary key constraint. For details, see MERGE optimization .

matching-clause

One of the following clauses:

- [WHEN MATCHED THEN UPDATE](#WhenMatched)
- [WHEN NOT MATCHED THEN INSERT](#WhenNotMatched)

MERGE supports one instance of each clause, and must include at least one.

WHEN MATCHED THEN UPDATE

For each *target-table* row that is joined (matched) to *source-dataset* , specifies to update one or more columns:

```
WHEN MATCHED [ AND update-filter ] THEN UPDATE
 SET { column = expression }[,...]
```

update-filter optionally filters the set of matching rows. The update filter can specify any number of conditions. Vertica evaluates each matching row against this filter, and updates only the rows that evaluate to true. For details, see Update and insert filters .

> **Note**
> Vertica also supports Oracle syntax for specifying update filters:
>
> ```
> WHEN MATCHED THEN UPDATE
>  SET { column = expression }[,...]
>  [ WHERE update-filter ]
> ```

The following requirements apply:

- A MERGE statement can contain only one WHEN MATCHED clause.
- *target-column* can only specify a column name in the target table. It cannot be qualified with a table name.

For details, see Merging table data .

WHEN NOT MATCHED THEN INSERT

For each *source-dataset* row that is not joined (not matched) to *target-table* , specifies to:

- Insert a new row into *target-table* .
- Populate each new row with the values specified in *values-list* .

```
WHEN NOT MATCHED [ AND insert-filter ] THEN INSERT
 [ ( column-list ) ] VALUES ( values-list )
```

column-list is a comma-delimited list of one or more target columns in the target table, listed in any order. MERGE maps *column-list* columns to *values-list* values in the same order, and each column-value pair must be compatible . If you omit *column-list* , Vertica maps *values-list* values to columns according to column order in the table definition.

insert-filter optionally filters the set of non-matching rows. The insert filter can specify any number of conditions. Vertica evaluates each non-matching source row against this filter. For each row that evaluates to true, Vertica inserts a new row in the target table. For details, see Update and insert filters .

> **Note**
> Vertica also supports Oracle syntax for specifying insert filters:
>
> ```
> WHEN NOT MATCHED THEN INSERT
> [ ( column-list ) ] VALUES ( values-list
> [ WHERE insert-filter ]
> ```

The following requirements apply:

- A MERGE statement can contain only one WHEN NOT MATCHED clause.
- * column-list * can only specify column names in the target table. It cannot be qualified with a table name.
- Insert filter conditions can only reference the source data. If any condition references the target table, Vertica returns an error.

For details, see Merging table data .

Privileges

MERGE requires the following privileges:

- SELECT permissions on the source data and INSERT , UPDATE , and DELETE permissions on the target table.
- Automatic constraint enforcement requires SELECT permissions on the table containing the constraint.
- SELECT permissions on the target table if the condition in the syntax reads data from the target table.

For example, the following GRANT statement grants user1 access to the t2 table. This allows user1 to run the MERGE statement that follows:

```
=> GRANT SELECT, INSERT, UPDATE, DELETE ON TABLE t2 to user1;
GRANT PRIVILEGE

=>\c - user1
You are now connected as user "user1".

=> MERGE INTO t2 USING t1 ON t1.a = t2.a
WHEN MATCHED THEN UPDATE SET b = t1.b
WHEN NOT MATCHED THEN INSERT (a, b) VALUES (t1.a, t1.b);
```

Improving MERGE performance

You can improve MERGE performance in several ways:

- Design projections for optimal MERGE performance .
- Facilitate creation of optimized query plans .
- Use a source data set that is smaller than the target table.

For details, see MERGE optimization .

Constraint enforcement

If primary key, unique key, or check constraints are enabled for automatic enforcement in the target table, Vertica enforces those constraints when you load new data. If a violation occurs, Vertica rolls back the operation and returns an error.

> **Caution**
> If you run MERGE multiple times using the same target and source table, each iteration is liable to introduce duplicate values into the target columns and return with an error.

Columns prohibited from merge

The following columns cannot be specified in a merge operation; attempts to do so return with an error:

- Identity/auto-increment columns, or columns whose default value is set to a named sequence .
- Vmap columns such as __raw__ in flex tables.

- Columns of complex types (ARRAY, SET, ROW).

Examples

See:

- Basic MERGE example
- MERGE source options
- MERGE matching clauses
- Update and insert filters

See also

- Merging table data

PROFILE

Profiles a single SQL statement.

Syntax

```
PROFILE { sql-statement }
```

Parameters

sql-statement

A query (SELECT) statement or DML statement--for example, you can profile INSERT , UPDATE , COPY , and MERGE .

Output

Writes profile summary to stderr, saves details to system catalog V_MONITOR.EXECUTION_ENGINE_PROFILES .

Privileges

The same privileges required to run the profiled statement

Description

PROFILE generates detailed information about how the target statement executes, and saves that information in the system catalog V_MONITOR.EXECUTION_ENGINE_PROFILES . Query output is preceded by a profile summary: profile identifiers transaction_id and statement_id , initiator memory for the query, and total memory required. For example:

```
=> PROFILE SELECT customer_name, annual_income FROM public.customer_dimension WHERE (customer_gender, annual_income) IN (SELECT
customer_gender, MAX(annual_income) FROM public.customer_dimension GROUP BY customer_gender);
NOTICE 4788:  Statement is being profiled
HINT:  Select * from v_monitor.execution_engine_profiles where transaction_id=45035996274683334 and statement_id=7;
NOTICE 3557:  Initiator memory for query: [on pool general: 708421 KB, minimum: 554324 KB]
NOTICE 5077:  Total memory required by query: [708421 KB]
  customer_name   | annual_income
------------------+---------------
 Emily G. Vogel   |        999998
 James M. McNulty |        999979
(2 rows)
```

Use profile identifiers to query the table for profile information on a given query.

See also

Profiling single statements

RELEASE SAVEPOINT

Destroys a savepoint without undoing the effects of commands executed after the savepoint was established.

Syntax

```
RELEASE [ SAVEPOINT ] savepoint_name
```

Parameters

savepoint_name

Specifies the name of the savepoint to destroy.

Privileges

None

Notes

Once destroyed, the savepoint is unavailable as a rollback point.

Examples

The following example establishes and then destroys a savepoint called my_savepoint. The values 101 and 102 are both inserted at commit.

```
=> INSERT INTO product_key VALUES (101);
=> SAVEPOINT my_savepoint;
=> INSERT INTO product_key VALUES (102);
=> RELEASE SAVEPOINT my_savepoint;
=> COMMIT;
```

See also

- SAVEPOINT
- ROLLBACK TO SAVEPOINT

REVOKE statements

REVOKE statements let you revoke privileges on database objects from users and roles .

Important

In a database with trust authentication, REVOKE statements appear to work as expected but have no real effect on database security.

In this section

- REVOKE (authentication)
- REVOKE (database)
- REVOKE (library)
- REVOKE (model)
- REVOKE (procedure)
- REVOKE (Resource pool)
- REVOKE (Role)
- REVOKE (schema)
- REVOKE (sequence)
- REVOKE (storage location)
- REVOKE (table)
- REVOKE (TLS configuration)
- REVOKE (user defined extension)
- REVOKE (view)

REVOKE (authentication)

Revokes privileges on an authentication method from users and roles .

Syntax

```
REVOKE AUTHENTICATION auth-method-name FROM grantee[,...]
```

Parameters

auth-method-name

Name of the target authentication method.

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

Privileges

Superuser

Examples

- Revoke v_ldap authentication from user jsmith :

```
=> REVOKE AUTHENTICATION v_ldap FROM jsmith;
```

- Revoke v_gss authentication from the role DBprogrammer :

```
=> REVOKE AUTHENTICATION v_gss FROM DBprogrammer;
```

- Revoke localpwd as the default client authentication method:

```
=> REVOKE AUTHENTICATION localpwd FROM PUBLIC;
```

See also

- ALTER AUTHENTICATION
- CREATE AUTHENTICATION
- DROP AUTHENTICATION
- GRANT (authentication)

REVOKE (database)

Revokes database privileges from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { privilege[,...] | ALL [ PRIVILEGES ] }
  ON DATABASE db-spec
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

privilege

The database privilege to revoke, one of the following:

- CREATE : Create schemas.
- TEMP : Create temporary tables.

ALL [PRIVILEGES]

Revokes all database privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES is supported to comply with the SQL standard.

ON DATABASE *db-spec*

Specifies the current database, set to the database name or DEFAULT .

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

Revoke user Fred 's privilege to create schemas in the current database:

```
=> REVOKE CREATE ON DATABASE DEFAULT FROM Fred;
```

Revoke user Fred 's privilege to create temporary tables in the current database:

```
=> REVOKE TEMP ON DATABASE DEFAULT FROM Fred;
```

See also

- GRANT (database)
- Granting and revoking privileges

REVOKE (library)

Revokes library privileges from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { USAGE | ALL [ PRIVILEGES ] }
  ON LIBRARY [[database.]schema.]library[,...]
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

USAGE

Revokes access to the specified libraries.
Important
Privileges on functions in these libraries must be separately revoked.

ALL [PRIVILEGES]

Revokes all library privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack. The optional keyword PRIVILEGES conforms with the SQL standard.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

library

The target library.

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Examples

These commands show how to create a new library, and then grant and revoke user Fred 's USAGE privilege on that library.

```
=> CREATE LIBRARY MyFunctions AS 'home/dbadmin/my_functions.so';
=> GRANT USAGE ON LIBRARY MyFunctions TO Fred;
=> REVOKE USAGE ON LIBRARY MyFunctions FROM Fred;
```

See also

- GRANT (library)
- Granting and revoking privileges

REVOKE (model)

Revokes model privileges from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { privilege[,...] | ALL [ PRIVILEGES ] }
  ON MODEL [[database.]schema.]model-name [,...]
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

USAGE

One of the following privileges:

- USAGE: Usage of the specified models
- ALTER
- DROP

ALL [PRIVILEGES]

Revokes all model privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

model-name

Name of the target model.

*** grantee ***

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

Revoke user Fred 's USAGE privilege on model mySvmClassModel :

```
=> REVOKE USAGE ON mySvmClassModel FROM Fred;
```

See also

- GRANT (model)
- Managing model security

REVOKE (procedure)

Revokes procedure privileges from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { EXECUTE | ALL PRIVILEGES }
  ON PROCEDURE [[database.]schema.]procedure( [argument-list] )[,...]
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

EXECUTE

Revokes grantees ability to run the specified procedures.

ALL [PRIVILEGES]

Revokes all procedure privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** procedure ***

The target procedure.

argument-list

A comma-delimited list of procedure arguments, where each argument is specified as follows:

```
[argname] argtype
```

If the procedure is defined with no arguments, supply an empty argument list.

*** grantee ***

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

This example revokes user Bob 's execute privilege on the tokenize procedure.

```
=> REVOKE EXECUTE ON PROCEDURE tokenize(varchar) FROM Bob;
```

See also

- GRANT (procedure)
- Granting and revoking privileges

REVOKE (Resource pool)

Revokes resource pool access privileges from users and roles .

Vertica checks resource pool privileges at runtime. Revoking a user's privileges for a resource pool can have an immediate effect on the user's current session. For example, a user query might require USAGE privileges on a resource pool. If you revoke those privileges from that user, subsequent attempts by the user to execute that query fail and return with an error message.

Syntax

```
REVOKE  [ GRANT OPTION FOR ] { USAGE | ALL PRIVILEGES }
  ON RESOURCE POOL resource-pool[,...]
  [FOR SUBCLUSTER subcluster | FOR CURRENT SUBCLUSTER]
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

USAGE

Revokes grantee's access to the specified resource pool.

ALL PRIVILEGES

Revokes all resource pool privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

resource-pool

The target resource pool.

subcluster

The subcluster for the resource pool.

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

Revoke user Joe 's USAGE privileges on resource pool Joe_pool .

```
=> REVOKE USAGE ON RESOURCE POOL Joe_pool FROM Joe;
REVOKE PRIVILEGE
```

Revoke user Joe 's USAGE privileges on resource pool Joe_pool for subcluster sub1 .

```
=> REVOKE USAGE ON RESOURCE POOL Joe_pool FOR SUBCLUSTER sub1 FROM Joe;
REVOKE PRIVILEGE
```

See also

- GRANT (Resource pool)
- Granting and revoking privileges

REVOKE (Role)

Revokes a role from users and roles .

Syntax

```
REVOKE [ ADMIN OPTION FOR ] role[,...]
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

ADMIN OPTION FOR

Revokes from the grantees the authority to assign the specified roles to other users or roles. Current roles for grantees remain unaffected. If you omit this clause, Vertica revokes role assignment privileges and the current roles .

role

Role to revoke.

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

One of the following:

- Superuser
- Privileges grantee who was given the option (WITH ADMIN OPTION) of extending these privileges to other users

Examples

This example shows the revocation of the pseudosuperuser role from the dbadmin user:

```
=> REVOKE pseudosuperuser from dbadmin;
```

This example shows the revocation of administration access from the dbadmin user for the pseudosuperuser role. The ADMIN OPTION command does not remove the pseudosuperuser role.

```
=> REVOKE ADMIN OPTION FOR pseudosuperuser FROM dbadmin;
```

Notes

If the role you are trying to revoke was not already granted to the user, Vertica returns a NOTICE:

```
=> REVOKE commentor FROM Sue;
NOTICE 2022:  Role "commentor" was not already granted to user "Sue"
REVOKE ROLE
```

See also

- GRANT (Role)
- Granting and revoking privileges

REVOKE (schema)

Revokes schema privileges from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { privilege[,...] | ALL [ PRIVILEGES ] }
  ON SCHEMA [database.]schema[,...]
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

privilege

The schema privilege to revoke, one of the following:

- USAGE: Access objects in the specified schemas.

- CREATE: Create objects in the specified schemas.

You can also revoke privileges from tables and views that they inherited on creation from this schema. When you revoke inherited privileges at the schema level, Vertica automatically applies the revocation to all tables and views that inherited these privileges.

- SELECT: Query tables and views. SELECT privileges are granted by default to the PUBLIC role.
- INSERT: Insert rows, or and load data into tables with COPY .

> **Note**
> COPY FROM STDIN is allowed for users with INSERT privileges, while COPY FROM *file* requires admin privileges.

- UPDATE: Update table rows.
- DELETE: Delete table rows.
- REFERENCES: Create foreign key constraints on this table. This privilege must be set on both referencing and referenced tables.
- TRUNCATE: Truncate table contents. Non-owners of tables can also execute the following partition operations on them:
  - DROP_PARTITIONS
  - SWAP_PARTITIONS_BETWEEN_TABLES
  - MOVE_PARTITIONS_TO_TABLE
- ALTER: Modify the DDL of tables and views with ALTER TABLE and ALTER VIEW , respectively.
- DROP: Drop tables and views.

ALL [PRIVILEGES]

Revokes USAGE AND CREATE privileges. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

Important
Inherited privileges must be explicitly revoked.

[*database* .] *schema*

The schema on which to revoke privileges. If you specify a database, it must be the current database.

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

Revoke user Joe 's USAGE privilege on schema online_sales .

```
=> REVOKE USAGE ON SCHEMA online_sales FROM Joe;
REVOKE PRIVILEGE
```

See also

- GRANT (schema)
- Granting and revoking privileges

REVOKE (sequence)

Revokes sequence privileges from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { privilege[,...] | ALL [ PRIVILEGES ] }
  ON {
    SEQUENCE [[database.]schema.]sequence[,...]
    | ALL SEQUENCES IN SCHEMA [database.]schema[,...] }
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

privilege

One of the following privileges:

- SELECT: Execute functions CURRVAL and NEXTVAL on the specified sequences.
- ALTER: Modify a sequence's DDL with ALTER SEQUENCE
- DROP: Drop this sequence with DROP SEQUENCE .

ALL [PRIVILEGES]

Revokes all sequence privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES is supported to comply with the SQL standard.

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

SEQUENCE *sequence*

Specifies the sequence on which to revoke privileges.

ALL SEQUENCES IN SCHEMA *schema*

Revokes the specified privileges on all sequences in schema *schema* .

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

Revoke user Joe 's privileges on sequence my_seq .

```
=> REVOKE ALL PRIVILEGES ON SEQUENCE my_seq FROM Joe;
REVOKE PRIVILEGE
```

See also

- GRANT (sequence)
- Granting and revoking privileges

REVOKE (storage location)

Revokes privileges on a USER-defined storage location from users and roles . For more information, see Creating storage locations .

Note
If the storage location is dropped , Vertica automatically revokes all privileges on it.

Syntax

```
REVOKE [ GRANT OPTION FOR ] { privilege[,...] | ALL [ PRIVILEGES ] }
  ON LOCATION 'path' [ ON node ]
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

privilege

One of the following privileges:

- READ : Copy data from files in the storage location into a table.
- WRITE : Export data from the database to the storage location. With WRITE privileges, grantees can also save COPY statement rejected data and exceptions files to the storage location.

ALL [PRIVILEGES]

Revokes all storage location privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES is supported to comply with the SQL standard.

ON LOCATION ' *path* ' [ON *node*]

Specifies the path name mount point of the storage location. If qualified by ON NODE , Vertica revokes access to the storage location residing on *node* .

If no node is specified, the revoke operation applies to all nodes on the specified path. All nodes must be on the specified path; otherwise, the entire revoke operation rolls back.

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

See GRANT (storage location) .

See also

Granting and revoking privileges
REVOKE (table)

Revokes table privileges from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { privilege[,...] | ALL [ PRIVILEGES ] }
  ON {
    [ TABLE ] [[database.]schema.]table[,...]
    | ALL TABLES IN SCHEMA [database.]schema[,...] }
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

privilege

One of the following privileges:

- SELECT: Quer y tables. SELECT privileges are granted by default to the PUBLIC role.
- INSERT: Insert table rows with INSERT , and load data with COPY .

> **Note**
> COPY FROM STDIN is allowed for users with INSERT privileges, while COPY FROM *file* requires admin privileges.

- UPDATE: Update table rows.
- DELETE: Delete table rows.
- REFERENCES: Create foreign key constraints on this table. This privilege must be set on both referencing and referenced tables.
- TRUNCATE: Truncate table contents. Non-owners of tables can also execute the following partition operations on them:
  - DROP_PARTITIONS
  - SWAP_PARTITIONS_BETWEEN_TABLES
  - MOVE_PARTITIONS_TO_TABLE
- ALTER: Modify a table's DDL with ALTER TABLE .
- DROP: Drop a table .

ALL [PRIVILEGES]

Revokes all table privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES is supported to comply with the SQL standard.

[*database.*] *schema*

Specifies a schema , by default public . If *schema* is any schema other than public , you must supply the schema name. For example:

```
myschema.thisDbObject
```

One exception applies: you can specify system tables without their schema name.
If you specify a database, it must be the current database.

TABLE *table*

Specifies the table on which to revoke privileges.

ON ALL TABLES IN SCHEMA *schema*

Revokes the specified privileges on all tables and views in schema *schema* .

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Ownership
- GRANT OPTION on the object

Examples

Revoke user Joe 's privileges on table customer_dimension .

```
=> REVOKE ALL PRIVILEGES ON TABLE customer_dimension FROM Joe;
REVOKE PRIVILEGE
```

See also

- GRANT (table)
- Granting and revoking privileges

REVOKE (TLS configuration)

Revokes privileges granted on one or more TLS CONFIGURATIONs from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ]
  { ALL | [ privilege[,...] ]}
  ON TLS CONFIGURATION tls_configuration[,...]
  FROM grantee [,...]
```

Parameters

WITH GRANT OPTION

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

privilege

The privilege to revoke, one of the following:

- ALTER TLS CONFIGURATION

tls_configuration

The TLS CONFIGURATION on which to revoke privileges.

grantee

Specifies who is granted privileges, one of the following:

- *user-name*
- *role*
- PUBLIC : Default role of all users

Privileges

Non-superusers require USAGE on the schema and one of the following:

- Owner
- Privileges grantee given the option (WITH GRANT OPTION) of granting privileges to other users or roles.

Examples

To revoke ALTER privileges on the TLS CONFIGURATION server from the role client_server_tls_manager :

```
=> REVOKE ALTER ON TLS CONFIGURATION server FROM client_server_tls_manager;
```

REVOKE (user defined extension)

Revokes privileges on one or more user-defined extensions from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { EXECUTE | ALL PRIVILEGES }
  ON {
     UDx-type [[database.]schema.]function-name( [argument-list] )[,...]
     | ALL FUNCTIONS IN SCHEMA schema[,...] }
  FROM grantee[,...]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

EXECUTE

Revokes grantees ability to run the specified functions.

ALL [PRIVILEGES]

Revokes all function privileges that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

ON *UDx-type*

Specifies the function's user-defined extension (UDx) type, where *UDx-type* is one of the following:

- FUNCTION
- AGGREGATE FUNCTION
- ANALYTIC FUNCTION
- TRANSFORM FUNCTION
- FILTER
- PARSER
- SOURCE

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

function-name

The name of the user-defined function on which to revoke privileges.

ON ALL FUNCTIONS IN SCHEMA *schema*

Revokes privileges on all functions in the specified schema.

argument-list

Required for all polymorphic functions, a comma-delimited list of function arguments, where each argument is specified as follows:

```
[argname] argtype
```

If the procedure is defined with no arguments, supply an empty argument list.

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Privileges

Non-superuser, one of the following:

- Owner of the target function
- Privileges grantee who was given the option (WITH GRANT OPTION) of extending these privileges to other users

Examples

Revoke EXECUTE privileges from user Bob on function myzeroifnull :

```
=> REVOKE EXECUTE ON FUNCTION myzeroifnull (x INT) FROM Bob;
```

Revoke all privileges from user Doug on function Pagerank :

```
=> REVOKE ALL ON TRANSFORM FUNCTION Pagerank (t float) FROM Doug;
```

Revoke EXECUTE privileges on all functions in the zero-schema schema from user Bob:

```
=> REVOKE EXECUTE ON ALL FUNCTIONS IN SCHEMA zero-schema FROM Bob;
```

Revoke EXECUTE privileges from user Bob on the tokenize function:

```
=> REVOKE EXECUTE ON TRANSFORM FUNCTION tokenize(VARCHAR) FROM Bob;
```

Revoke all privileges on the ExampleSource() source from user Alice:

```
=> REVOKE ALL ON SOURCE ExampleSource() FROM Alice;
```

See also

- GRANT (User Defined Extension)
- Granting and Revoking Privileges
- Developing user-defined extensions (UDxs)

REVOKE (view)

Revokes privileges on a view from users and roles .

Syntax

```
REVOKE [ GRANT OPTION FOR ] { privilege[,...] | ALL [ PRIVILEGES ] }
  ON [[database.]schema.]view[,...]
  FROM grantee[,...]
  [ CASCADE ]
```

Parameters

GRANT OPTION FOR

Revokes the grant option for the specified privileges. Current privileges for grantees remain unaffected. If you omit this clause, Vertica revokes both the grant option and current privileges.

privilege

One of the following:

- SELECT: Query the specified views.
- ALTER: Modify a view's DDL with ALTER VIEW
- DROP: Drop this view with DROP VIEW .

ALL PRIVILEGES

Revokes all privileges that pertain to views that also belong to the revoker. Users cannot revoke privileges that they themselves lack.

The optional keyword PRIVILEGES conforms with the SQL standard.

[*database.*] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

view

The view on which to revoke privileges.

grantee

Specifies whose privileges are revoked, one of the following:

- User name
- Role
- PUBLIC : The default role of all users

CASCADE

I f the target grantees have a grant option to extend the specified privileges to other users, CASCADE specifies to search for these users and revoke the privileges from them also.

Examples

Revoke SELECT privileges from user Joe on view test_view .

```
=> REVOKE SELECT ON test_view FROM Joe;
REVOKE PRIVILEGE
```

See also

- GRANT (view)
- Granting and revoking privileges

ROLLBACK

Ends the current transaction and discards all changes that occurred during the transaction.

Syntax

```
ROLLBACK [ WORK | TRANSACTION ]
```

Parameters

WORK | TRANSACTION

Have no effect; they are optional keywords for readability.

Privileges

None

Notes

When an operation is rolled back, any locks that are acquired by the operation are also rolled back.

ABORT is a synonym for ROLLBACK.

Examples

This example shows how to roll back from a DELETE transaction.

```
=> SELECT * FROM sample_table;
a
---
1
(1 row)

=> DELETE FROM sample_table WHERE a = 1;

=> SELECT * FROM sample_table;
a
---
(0 rows)
=> ROLLBACK;
=> SELECT * FROM sample_table;
a
---
1
(1 row)
```

This example shows how to roll back the changes you made since the BEGIN statement.

```
=> BEGIN TRANSACTION ISOLATION LEVEL READ COMMITTED READ ONLY;
BEGIN
=> ROLLBACK TRANSACTION;
ROLLBACK
```

See also

- Transactions
- Creating and rolling back transactions
- BEGIN
- COMMIT
- END
- START TRANSACTION

ROLLBACK TO SAVEPOINT

Rolls back all commands that have been entered within the transaction since the given savepoint was established.

Syntax

```
ROLLBACK TO [SAVEPOINT] savepoint_name
```

Parameters

savepoint_name

Specifies the name of the savepoint to roll back to.

Privileges

None

Notes

- The savepoint remains valid and can be rolled back to again later if needed.
- When an operation is rolled back, any locks that are acquired by the operation are also rolled back.
- ROLLBACK TO SAVEPOINT implicitly destroys all savepoints that were established after the named savepoint.

Examples

The following example rolls back the values 102 and 103 that were entered after the savepoint, my_savepoint , was established. Only the values 101 and 104 are inserted at commit.

```
=> INSERT INTO product_key VALUES (101);
=> SAVEPOINT my_savepoint;
=> INSERT INTO product_key VALUES (102);
=> INSERT INTO product_key VALUES (103);
=> ROLLBACK TO SAVEPOINT my_savepoint;
=> INSERT INTO product_key VALUES (104);
=> COMMIT;
```

See also

- RELEASE SAVEPOINT
- SAVEPOINT

SAVE QUERY

Saves an input query to associate with a custom directed query.

Syntax

```
SAVE QUERY input-query
```

Parameters

input-query

The input query to associate with a custom directed query. The input query supports only one optimizer hint, :v .

Privileges

Superuser

Description

SAVE QUERY saves the specified input query for use by the next invocation of CREATE DIRECTED QUERY CUSTOM . CREATE DIRECTED QUERY CUSTOM pairs the saved query with its annotated query argument to create a directed query. Both statements must be issued in the same user session.

The saved query remains available until the one of the following events occurs:

- The next invocation of CREATE DIRECTED QUERY, whether invoked with CUSTOM or OPTIMIZER.
- Another invocation of SAVE QUERY.
- The session ends.

> **Caution**
> Vertica associates a saved query with a directed query without checking whether the input and annotated queries are compatible. Be careful to sequence SAVE QUERY and CREATE DIRECTED QUERY CUSTOM so the saved and directed queries are correctly matched.

Examples

See Custom directed queries .

SAVEPOINT

Creates a special mark, called a savepoint, inside a transaction. A savepoint allows all commands that are executed after it was established to be rolled back, restoring the transaction to the state it was in at the point in which the savepoint was established.

> **Tip**
> Savepoints are useful when creating nested transactions. For example, a savepoint could be created at the beginning of a subroutine. That way, the result of the subroutine could be rolled back if necessary.

Syntax

```
SAVEPOINT savepoint_name
```

Parameters

savepoint_name

Specifies the name of the savepoint to create.

Privileges

None

Notes

- Savepoints are local to a transaction and can only be established when inside a transaction block.
- Multiple savepoints can be defined within a transaction.
- If a savepoint with the same name already exists, it is replaced with the new savepoint.

Examples

The following example illustrates how a savepoint determines which values within a transaction can be rolled back. The values 102 and 103 that were entered after the savepoint, my_savepoint , was established are rolled back. Only the values 101 and 104 are inserted at commit.

```
=> INSERT INTO T1 (product_key) VALUES (101);
=> SAVEPOINT my_savepoint;
=> INSERT INTO T1 (product_key) VALUES (102);
=> INSERT INTO T1 (product_key) VALUES (103);
=> ROLLBACK TO SAVEPOINT my_savepoint;
=> INSERT INTO T1 (product_key) VALUES (104);
=> COMMIT;
=> SELECT product_key FROM T1;
.
.
.
101
104
(2 rows)
```

See also

- RELEASE SAVEPOINT
- ROLLBACK TO SAVEPOINT

SELECT

Returns a result set from one or more data sources— tables , views , joined tables , and named subqueries .

Syntax

```
[ AT epoch ] [ WITH-clause ] SELECT [ ALL | DISTINCT ]
  { * | { MATCH_COLUMNS('pattern') | expression [ [AS] alias ] }[,...] }
  [ into-table-clause ]
  [ from-clause ]
  [ where-clause ]
  [ time-series-clause ]
  [ group-by-clause[,...] ]
  [ having-clause[,...] ]
  [ match-clause ]
  [ union-clause ]
  [ intersect-clause ]
  [ except-clause ]
  [ order-by-clause [ offset-clause ]]
  [ limit-clause ]
  [ FOR UPDATE [ OF table-name[,...] ] ]
```

> **Note**
> SELECT statements can also embed various directives, or *hints*, that let you control how a given query is handled—for example, join hints such as JTYPE, which enforces the join type (merge or hash join).
>
> For details on using Vertica hints, see Hints.

Parameters

AT *epoch*

Returns data from the specified epoch, where *epoch* is one of the following:

- EPOCH LATEST : Return data up to but not including the current epoch. The result set includes data from the latest committed DML transaction.
- EPOCH *integer* : Return data up to and including the *integer* -specified epoch.
- TIME ' *timestamp* ' : Return data from the *timestamp* -specified epoch.

> **Note**
> These options are ignored if used to query temporary or external tables.

See Epochs for additional information about how Vertica uses epochs.
For details, see Historical queries.

ALL | DISTINCT

- ALL (default): Retains duplicate rows in result set or group.
- DISTINCT : Removes duplicate rows from the result set or group.

The ALL or DISTINCT qualifier must immediately follow the SELECT keyword. Only one instance of this keyword can appear in the select list.

*****

Lists all columns in the queried tables.

> **Caution**
> Selecting all columns from the queried tables can produce a very large wide set, which can adversely affect performance.

MATCH_COLUMNS (' *pattern* ')

Returns all columns in the queried tables that match *pattern* .

***expression* [[AS] *alias*]**

An expression that typically resolves to column data from the queried tables—for example, names of columns that are specified in the FROM clause; also:

- Literals (constants)
- Aggregate expressions

- CASE expressions
- SQL functions
- Subqueries in the SELECT list

You can optionally assign a temporary alias to each column expression and reference that alias elsewhere in the SELECT statement—for example, in the query predicate or ORDER BY clause. Vertica uses the alias as the column heading in query output.

FOR UPDATE

Specifies to obtain an X lock on all tables specified in the query, most often used from READ COMMITTED isolation.

FOR UPDATE requires update/delete permissions on the queried tables and cannot be issued from a read-only transaction.

Privileges

Non-superusers:

- USAGE on the schema
- SELECT on the table or view

> **Note**
> As view owner, you can grant other users SELECT privilege on the view only if one of the following is true:
>
> - You own the view's base table.
> - You have SELECT...WITH GRANT OPTION privilege on the view's base table.

Examples

When multiple clients run transactions as in the following example query, deadlocks can occur if FOR UPDATE is not used. Two transactions acquire an S lock, and when both attempt to upgrade to an X lock, they encounter deadlocks:

```
=> SELECT balance FROM accounts WHERE account_id=3476 FOR UPDATE;
   ...
=> UPDATE accounts SET balance = balance+10 WHERE account_id=3476;
=> COMMIT;
```

In this section

- EXCEPT clause
- FROM clause
- GROUP BY clause
- HAVING clause
- INTERSECT clause
- INTO TABLE clause
- LIMIT clause
- MATCH clause
- MINUS clause
- OFFSET clause
- ORDER BY clause
- TIMESERIES clause
- UNION clause
- WHERE clause
- WITH clause

EXCEPT clause

Combines two or more SELECT queries. EXCEPT returns distinct results of the left-hand query that are not also found in the right-hand query.

> **Note**
> MINUS is an alias for EXCEPT.

Syntax

```
SELECT
  EXCEPT except-query[...]
  [ ORDER BY { column-name  | ordinal-number } [ ASC | DESC ] [,...] ]
  [ LIMIT { integer | ALL } ]
  [ OFFSET integer ]
```

Notes

- Use the EXCEPT clause to filter out specific results from a SELECT statement. The EXCEPT query operates on the results of two or more SELECT queries. It returns only those rows in the left-hand query that are not also present in the right-hand query.
- Vertica evaluates multiple EXCEPT clauses in the same SELECT query from left to right, unless parentheses indicate otherwise.
- You cannot use the ALL keyword with an EXCEPT query.
- The results of each SELECT statement must be union compatible. Each statement must return the same number of columns, and the corresponding columns must have compatible data types. For example, you cannot use the EXCEPT clause on a column of type INTEGER and a column of type VARCHAR. If statements do not meet these criteria, Vertica returns an error.

  > **Note**
  > The Data type coercion chart lists the data types that can be cast to other data types. If one data type can be cast to the other, those two data types are compatible.

- You can use EXCEPT in FROM, WHERE, and HAVING clauses.
- You can order the results of an EXCEPT operation by including an ORDER BY operation in the statement. When you write the ORDER BY list, specify the column names from the leftmost SELECT statement, or specify integers that indicate the position of the columns by which to sort.
- The rightmost ORDER BY, LIMIT, or OFFSET clauses in an EXCEPT query do not need to be enclosed in parentheses, because the rightmost query specifies that Vertica perform the operation on the results of the EXCEPT operation. Any ORDER BY, LIMIT, or OFFSET clauses contained in SELECT queries that appear earlier in the EXCEPT query must be enclosed in parentheses.
- Vertica supports EXCEPT noncorrelated subquery predicates. For example:

```
=> SELECT * FROM T1
  WHERE T1.x IN
    (SELECT MAX(c1) FROM T2
     EXCEPT
       SELECT MAX(cc1) FROM T3
     EXCEPT
       SELECT MAX(d1) FROM T4);
```

Examples

Consider the following three tables:

Company_A

```
 Id  | emp_lname |      dept      | sales
-----+-----------+----------------+-------
1234 | Stephen   | auto parts     |  1000
5678 | Alice     | auto parts     |  2500
9012 | Katherine | floral         |   500
3214 | Smithson  | sporting goods |  1500
(4 rows)
```

Company_B

```
 Id  | emp_lname |    dept     | sales
------+-----------+-------------+-------
 4321 | Marvin    | home goods  |   250
 8765 | Bob       | electronics | 20000
 9012 | Katherine | home goods  |   500
 3214 | Smithson  | home goods  |  1500
(4 rows)
```

Company_C

```
 Id  | emp_lname |      dept      | sales
------+-----------+----------------+-------
 3214 | Smithson  | sporting goods |  1500
 5432 | Madison   | sporting goods |   400
 7865 | Cleveland | outdoor        |  1500
 1234 | Stephen   | floral         |  1000
(4 rows)
```

The following query returns the IDs and last names of employees that exist in Company_A, but not in Company_B:

```
=> SELECT id, emp_lname FROM Company_A
   EXCEPT
   SELECT id, emp_lname FROM Company_B;
 id  | emp_lname
------+-----------
 1234 | Stephen
 5678 | Alice
(2 rows)
```

The following query sorts the results of the previous query by employee last name:

```
=> SELECT id, emp_lname FROM Company_A
   EXCEPT
   SELECT id, emp_lname FROM Company_B
   ORDER BY emp_lname ASC;
 id  | emp_lname
------+-----------
 5678 | Alice
 1234 | Stephen
(2 rows)
```

If you order by the column position, the query returns the same results:

```
=> SELECT id, emp_lname FROM Company_A
   EXCEPT
   SELECT id, emp_lname FROM Company_B
   ORDER BY 2 ASC;
 id  | emp_lname
------+-----------
 5678 | Alice
 1234 | Stephen
(2 rows)
```

The following query returns the IDs and last names of employees that exist in Company_A, but not in Company_B or Company_C:

```
=> SELECT id, emp_lname FROM Company_A
   EXCEPT
   SELECT id, emp_lname FROM Company_B
   EXCEPT
   SELECT id, emp_lname FROM Company_C;
 id  | emp_lname
------+-----------
 5678 | Alice
(1 row)
```

The following query shows the results of mismatched data types:

```
=> SELECT id, emp_lname FROM Company_A
   EXCEPT
   SELECT emp_lname, id FROM Company_B;
ERROR 3429:  For 'EXCEPT', types int and varchar are inconsistent
DETAIL:  Columns: id and emp_lname
```

Using the VMart example database, the following query returns information about all Connecticut-based customers who bought items through stores and whose purchases amounted to more than $500, except for those customers who paid cash:

```
=> SELECT customer_key, customer_name FROM public.customer_dimension
     WHERE customer_key IN (SELECT customer_key FROM store.store_sales_fact
       WHERE sales_dollar_amount > 500
       EXCEPT
       SELECT customer_key FROM store.store_sales_fact
       WHERE tender_type = 'Cash')
     AND customer_state = 'CT';
 customer_key |    customer_name
--------------+----------------------
       15084 | Doug V. Lampert
       21730 | Juanita F. Peterson
       24412 | Mary U. Garnett
       25840 | Ben Z. Taylor
       29940 | Brian B. Dobisz
       32225 | Ruth T. McNulty
       33127 | Darlene Y. Rodriguez
       40000 | Steve L. Lewis
       44383 | Amy G. Jones
       46495 | Kevin H. Taylor
(10 rows)
```

See also

- SELECT
- INTERSECT clause
- UNION clause
- Subqueries

FROM clause

A comma-separated list of data sources to query.

Syntax

```
FROM dataset[,...] [ TABLESAMPLE(percent) ]
```

Parameters

dataset

A set of data to query, one of the following:

- Table reference
- Joined tables
- View
- Named subquery : *subquery* [AS] *name*

TABLESAMPLE(*percent*)

Specifies to return a random sampling of records, where *percent* specifies the approximate sampling size. The *percent* value must be between 0 and 100, exclusive, and can include decimal values. The number of records returned is not guaranteed to be the exact percentage specified.

All rows of the data have equal opportunities to be selected. Vertica performs sampling before applying other query filters.

Examples

Count all records in customer_dimension table:

```
=> SELECT COUNT(*) FROM customer_dimension;
 COUNT
-------
 50000
(1 row)
```

Return a small sampling of rows in table customer_dimension :

```
=> SELECT customer_name, customer_state FROM customer_dimension TABLESAMPLE(0.5) WHERE customer_state='IL';
    customer_name    | customer_state
---------------------+----------------
 Amy Y. McNulty      | IL
 Daniel C. Nguyen    | IL
 Midori O. Greenwood | IL
 Meghan U. Lampert   | IL
 Tiffany Y. Lang     | IL
 Laura S. King       | IL
 Steve T. Nguyen     | IL
 Craig S. Webber     | IL
 Luigi A. Lewis      | IL
 Mark W. Williams    | IL
(10 rows)
```

In this section

- Joined-table
- Table-reference

Joined-table

Specifies how to join tables.

Syntax

table-reference [*join-type*] JOIN *table-reference*[TABLESAMPLE(*sampling-pct*)] [ON *join-predicate*]

Parameters

table-reference

A table or another *joined-table* .

join-type

Valid Values:

- INNER (default). INNER JOIN is equivalent to a query that specifies its join predicate in a WHERE clause.
- LEFT [OUTER]
- RIGHT [OUTER]
- FULL [OUTER]
- NATURAL
- CROSS

TABLESAMPLE

Specifies to use simple random sampling to return an approximate percentage of records. All rows in the total potential return set are equally eligible to be included in the sampling. Vertica performs this sampling before other filters in the query are applied. The number of records returned is not guaranteed to be the exact percentage of records defined by *sampling-pct* .

The TABLESAMPLE option is valid only with user-defined tables and Data Collector (DC) tables. Views and system tables are not supported.

sampling-pct

Specifies the percentage of records to be returned as a part of sampling. The value must be greater than 0 and less than 100.

ON

join-predicate

An equi-join based on one or more columns in the joined tables. invalid for NATURAL and CROSS joins, required for all other join types.

Alternative JOIN syntax options

Vertica supports two older join syntax conventions:

- Table joins specified by join predicate in a WHERE clause
- Table joins specified by a USING clause

For details, see Join Syntax .

Examples

The following SELECT statement qualifies its JOIN clause with the TABLESAMPLE option:

```
=> SELECT user_id.id, user_name.name FROM user_name TABLESAMPLE(50)
    JOIN user_id TABLESAMPLE(50) ON user_name.id = user_id.id;
 id  |  name
-----+--------
 489 | Markus
2234 | Cato
 763 | Pompey
(3 rows)
```

Table-reference

Syntax

```
[[database.]schema.]table[ [AS] alias]
```

Parameters

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

table

A table in the logical schema.

[AS] *alias*

A temporary name used for references to *table* .

GROUP BY clause

Use the GROUP BY clause with aggregate functions in a SELECT statement to collect data across multiple records. Vertica groups the results into one or more sets of rows that match an expression.

The GROUP BY clause without aggregates is similar to using SELECT DISTINCT .

ROLLUP is an extension to the GROUP BY clause. ROLLUP performs subtotal aggregations.

Syntax

```
GROUP BY [/*+GBYTYPE(algorithm)*/] { expression | aggregate-expression }[,...]
```

Arguments

/*+ GBYTYPE (*algorithm*)*/

Specifies which algorithm has precedence for implementing this GROUP BY clause, over the algorithm the Vertica query optimizer might otherwise choose. You can set *algorithm* to one of the following values:

- HASH : GROUPBY HASH algorithm
- PIPE : GROUPBY PIPELINED algorithm

For more information about both algorithms, see GROUP BY implementation options .

expression

Any expression, including constants and column references in the tables specified in the FROM clause . For example:

```
column,... column, (expression)
```

aggregate-expression

An ordered list of columns, expressions, CUBE, GROUPING SETS , or ROLLUP aggregates.

You can include CUBE and ROLLUP aggregates within a GROUPING SETS aggregate. CUBE and ROLLUP aggregates can result in a large amount of output. In that case, use GROUPING SETS to return only certain results.

You cannot include any aggregates within a CUBE or ROLLUP expression.

You can append multiple GROUPING SETS , CUBE , or ROLLUP aggregates in the same query. For example:

```
GROUP BY a,b,c,d, ROLLUP(a,b)
GROUP BY a,b,c,d, CUBE((a,b),c,d)
GROUP BY a,b,c,d, CUBE(a,b), ROLLUP (c,d)
GROUP BY ROLLUP(a), CUBE(b), GROUPING SETS(c)
GROUP BY a,b,c,d, GROUPING SETS ((a,d),(b,c),CUBE(a,b))
GROUP BY a,b,c,d, GROUPING SETS ((a,d),(b,c),(a,b),(a),(b),())
```

Usage considerations

- *expression* cannot include aggregate functions . However, you can use the GROUP BY clause with CUBE, GROUPING SETS, and ROLLUP to return summary values for each group.
- When you create a GROUP BY clause, you must include all non-aggregated columns that appear in the SELECT list.
- If the GROUP BY clause includes a WHERE clause, Vertica ignores all rows that do not satisfy the WHERE clause.

Examples

This example shows how to use the WHERE clause with GROUP BY . In this case, the example retrieves all employees whose last name begins with S, and ignores all rows that do not meet this criteria. The G ROUP BY clause uses the ILIKE function to retrieve only last names beginning with S. The aggregate function SUM computes the total vacation days for each group.

```
=> SELECT employee_last_name, SUM(vacation_days)
   FROM employee_dimension
   WHERE employee_last_name ILIKE 'S%'
   GROUP BY employee_last_name;
 employee_last_name | SUM
--------------------+------
 Sanchez            | 2892
 Smith              | 2672
 Stein              | 2660
(3 rows)
```

The GROUP BY clause in the following example groups results by vendor region, and vendor region's biggest deal:

```
=> SELECT vendor_region, MAX(deal_size) AS "Biggest Deal"
   FROM vendor_dimension
   GROUP BY vendor_region;
 vendor_region | Biggest Deal
---------------+--------------
 East          |       990889
 MidWest       |       699163
 NorthWest     |        76101
 South         |       854136
 SouthWest     |       609807
 West          |       964005
(6 rows)
```

The following query modifies the previous one with a HAVING clause, which specifies to return only groups whose maximum deal size exceeds $900,000:

```
=> SELECT vendor_region, MAX(deal_size) as "Biggest Deal"
   FROM vendor_dimension
   GROUP BY vendor_region
   HAVING MAX(deal_size) > 900000;
 vendor_region | Biggest Deal
---------------+--------------
 East          |       990889
 West          |       964005
(2 rows)
```

You can use the GROUP BY clause with one-dimensional arrays of scalar types. In the following example, grants is an ARRAY[VARCHAR] and grant_values is an ARRAY[INT].

```
=> CREATE TABLE employees (id INT, department VARCHAR(50), grants ARRAY[VARCHAR], grant_values ARRAY[INT]);

=> COPY employees FROM STDIN;
42|Physics|[US-7376,DARPA-1567]|[65000,135000]
36|Physics|[US-7376,DARPA-1567]|[10000,25000]
33|Physics|[US-7376]|[30000]
36|Astronomy|[US-7376,DARPA-1567]|[5000,4000]
\.

=> SELECT department, grants, SUM(apply_sum(grant_values)) FROM employees GROUP BY grants, department;
 department |          grants          |  SUM
------------+--------------------------+--------
 Physics    | ["US-7376","DARPA-1567"] | 235000
 Astronomy  | ["US-7376","DARPA-1567"] |   9000
 Physics    | ["US-7376"]              |  30000
(3 rows)
```

The GROUP BY clause without aggregates is similar to using SELECT DISTINCT . For example, the following two queries return the same results:

```
=> SELECT DISTINCT household_id FROM customer_dimension;
=> SELECT household_id FROM customer_dimension GROUP BY household_id;
```

See also

- CUBE aggregate
- GROUP_ID
- GROUPING
- GROUPING_ID
- GROUPING SETS aggregate
- ROLLUP

In this section

- CUBE aggregate
- GROUPING SETS aggregate
- ROLLUP aggregate

CUBE aggregate

Automatically performs all possible aggregations of the specified columns, as an extension to the GROUP BY clause.

You can use the ROLLUP clause with three grouping functions:

- GROUPING
- GROUP_ID
- GROUPING_ID

Syntax

```
GROUP BY group-expression[,...]
```

Parameters

group-expression

One or both of the following:

- An expression that is not an aggregate or a grouping function that includes constants and column references in FROM -specified tables. For example:

  ```
  column1, (column2+1), column3+column4
  ```

- A multilevel expression, one of the following:
  - ROLLUP
  - CUBE
  - GROUPING SETS

Restrictions

- GROUP BY CUBE does not order data. If you want to sort data, use the ORDER BY clause . The ORDER BY clause must come *after* the GROUP BY clause.
- You can use CUBE inside a GROUPING SETS expression, but not inside a ROLLUP expression or another CUBE expression.

Levels of CUBE aggregation

If *n* is the number of grouping columns, CUBE creates 2^n levels of aggregations. For example:

CUBE (A, B, C) creates all possible groupings, resulting in eight groups:

- (A, B, C)
- (A, B)
- (A, C)
- (B, C)
- (A)
- (B)
- (C)
- ()

If you increase the number of CUBE columns, the number of CUBE groupings increases exponentially. The CUBE query may be resource intensive and produce combinations that are not of interest. In that case, consider using the GROUPING SETS aggregate , which allows you to choose specific groupings.

Examples

Using CUBE to return all groupings

Suppose you have a table that contains information about family expenses for books and electricity:

```
=> SELECT * FROM expenses ORDER BY Category, Year;
 Year |  Category   | Amount
------+-------------+--------
2005  | Books       |  39.98
2007  | Books       |  29.99
2008  | Books       |  29.99
2005  | Electricity | 109.99
2006  | Electricity | 109.99
2007  | Electricity | 229.98
```

To aggregate the data by both Category and Year using the CUBE aggregate:

```
=> SELECT Category, Year, SUM(Amount) FROM expenses
   GROUP BY CUBE(Category, Year) ORDER BY 1, 2, GROUPING_ID();
 Category    | Year |  SUM
-------------+------+--------
 Books       | 2005 |  39.98
 Books       | 2007 |  29.99
 Books       | 2008 |  29.99
 Books       |      |  99.96
 Electricity | 2005 | 109.99
 Electricity | 2006 | 109.99
 Electricity | 2007 | 229.98
 Electricity |      | 449.96
             | 2005 | 149.97
             | 2006 | 109.99
             | 2007 | 259.97
             | 2008 |  29.99
             |      | 549.92
```

The results include subtotals for each category and year, and a grand total ($549.92).

Using CUBE with the HAVING clause

This example shows how you can restrict the GROUP BY results, use the HAVING clause with the CUBE aggregate. This query returns only the category totals and the full total:

```
=> SELECT Category, Year, SUM(Amount) FROM expenses
   GROUP BY CUBE(Category,Year) HAVING GROUPING(Year)=1;
 Category    | Year |  SUM
-------------+------+--------
 Books       |      |  99.96
 Electricity |      | 449.96
             |      | 549.92
```

The next query returns only the aggregations for the two categories for each year. The GROUPING ID function specifies to omit the grand total ($549.92):

```
=> SELECT Category, Year, SUM (Amount) FROM expenses
   GROUP BY CUBE(Category,Year) HAVING GROUPING_ID(Category,Year)<2
   ORDER BY 1, 2, GROUPING_ID();
 Category   | Year |  SUM
------------+------+--------
 Books      | 2005 |  39.98
 Books      | 2007 |  29.99
 Books      | 2008 |  29.99
 Books      |      |  99.96
 Electrical | 2005 | 109.99
 Electrical | 2006 | 109.99
 Electrical | 2007 | 229.98
 Electrical |      | 449.96
```

- GROUP_ID
- GROUPING
- GROUPING_ID
- GROUPING SETS aggregate
- ROLLUP aggregate

GROUPING SETS aggregate

The GROUPING SETS aggregate is an extension to the GROUP BY clause that automatically performs subtotal aggregations on groupings that you specify.

You can use the GROUPING SETS clause with three grouping functions:

- GROUPING
- GROUP_ID
- GROUPING_ID

To sort data, use the ORDER BY clause. The ORDER BY clause must follow the GROUP BY clause.

Syntax

```
GROUP BY group-expression[,...]
```

Parameters

group-expression

One or both of the following:

- An expression that is not an aggregate or a grouping function that includes constants and column references in FROM -specified tables. For example:
  column1, (column2+1), column3+column4
- A multilevel expression, one of the following:
  - ROLLUP
  - CUBE
  - GROUPING SETS

Defining the groupings

GROUPING SETS allows you to specify exactly which groupings you want in the results. You can also concatenate the groupings as follows:

The following example clauses result in the groupings shown.

This clause...	Defines groupings...
...GROUP BY GROUPING SETS(A,B,C,D)...	(A), (B), (C), (D)
...GROUP BY GROUPING SETS((A),(B),(C),(D))...	(A), (B), (C), (D)
...GROUP BY GROUPING SETS((A,B,C,D))...	(A, B, C, D)
...GROUP BY GROUPING SETS(A,B),GROUPING SETS(C,D)...	(A, C), (B, C), (A, D), (B, C)
...GROUP BY GROUPING SETS((A,B)),GROUPING SETS(C,D)...	(A, B, C), (A, B, D)
...GROUP BY GROUPING SETS(A,B),GROUPING SETS(ROLLUP(C,D))...	(A,B), (A,B,C), (A,B,C,D)
...GROUP BY A,B,C,GROUPING SETS(ROLLUP(C, D))...	(A, B, C, D), (A, B, C), (A, B, C) The clause contains two groups (A, B, C). In the HAVING clause, use the GROUP_ID function as a predicate, to eliminate the second grouping.

Example: selecting groupings

This example shows how to select only those groupings you want. Suppose you want to aggregate on columns only, and you do not need the grand total. The first query omits the total. In the second query, you add () to the GROUPING SETS list to get the total. Use the ORDER BY clause to sort the results by grouping:

```
=> SELECT Category, Year, SUM(Amount) FROM expenses
   GROUP BY GROUPING SETS((Category, Year), (Year))
   ORDER BY 1, 2, GROUPING_ID();
  Category  | Year |  SUM
------------+------+--------
 Books      | 2005 |  39.98
 Books      | 2007 |  29.99
 Books      | 2008 |  29.99
 Electrical | 2005 | 109.99
 Electrical | 2006 | 109.99
 Electrical | 2007 | 229.98
            | 2005 | 149.97
            | 2006 | 109.99
            | 2007 | 259.97
            | 2008 |  29.99
=> SELECT Category, Year, SUM(Amount) FROM expenses
   GROUP BY GROUPING SETS((Category, Year), (Year), ())
   ORDER BY 1, 2, GROUPING_ID();
  Category  | Year |  SUM
------------+------+--------
 Books      | 2005 |  39.98
 Books      | 2007 |  29.99
 Books      | 2008 |  29.99
 Electrical | 2005 | 109.99
 Electrical | 2006 | 109.99
 Electrical | 2007 | 229.98
            | 2005 | 149.97
            | 2006 | 109.99
            | 2007 | 259.97
            | 2008 |  29.99
            |      | 549.92
```

- ROLLUP aggregate

ROLLUP aggregate

Automatically performs subtotal aggregations as an extension to the GROUP BY clause. ROLLUP performs these aggregations across multiple dimensions, at different levels, within a single SQL query.

You can use the ROLLUP clause with three grouping functions:

- GROUPING
- GROUP_ID
- GROUPING_ID

Syntax

ROLLUP *grouping-expression* [,...]

Parameters

group-expression

One or both of the following:

- An expression that is not an aggregate or a grouping function that includes constants and column references in FROM -specified tables. For example:
  column1, (column2+1), column3+column4

- A multilevel expression, one of the following:
  - ROLLUP
  - CUBE
  - GROUPING SETS

Restrictions

GROUP BY ROLLUP does not sort results. To sort data, an ORDER BY clause must follow the GROUP BY clause.

Levels of aggregation

If *n* is the number of grouping columns, ROLLUP creates *n* +1 levels of subtotals and grand total. Because ROLLUP removes the right-most column at each step, specify column order carefully.

Suppose that ROLLUP(A, B, C) creates four groups:

- (A, B, C)
- (A, B)
- (A)
- ()

Because ROLLUP removes the right-most column at each step, there are no groups for (A, C) and (B, C) .

If you enclose two or more columns in parentheses, GROUP BY treats them as a single entity. For example:

- ROLLUP(A, B, C) creates four groups:

```
(A, B, C)
(A, B)
(A)
()
```

- ROLLUP((A, B), C) treats (A, B) as a single entity and creates three groups:

```
(A, B, C)
(A, B)
()
```

Example: aggregating the full data set

The following example shows how to use the GROUP BY clause to determine family expenses for electricity and books over several years. The SUM aggregate function computes the total amount of money spent in each category per year.

Suppose you have a table that contains information about family expenses for books and electricity:

```
=> SELECT * FROM expenses ORDER BY Category, Year;
 Year |  Category   | Amount
------+-------------+--------
2005  | Books       |  39.98
2007  | Books       |  29.99
2008  | Books       |  29.99
2005  | Electricity | 109.99
2006  | Electricity | 109.99
2007  | Electricity | 229.98
```

For the expenses table, ROLLUP computes the subtotals in each category between 2005–2007:

- Books: $99.96
- Electricity: $449.96
- Grand total: $549.92.

Use the ORDER BY clause to sort the results:

```
=> SELECT Category, Year, SUM(Amount) FROM expenses
  GROUP BY ROLLUP(Category, Year) ORDER BY 1,2, GROUPING_ID();
 Category    | Year |  SUM
-------------+------+--------
 Books       | 2005 |  39.98
 Books       | 2007 |  29.99
 Books       | 2008 |  29.99
 Books       |      |  99.96
 Electricity | 2005 | 109.99
 Electricity | 2006 | 109.99
 Electricity | 2007 | 229.98
 Electricity |      | 449.96
             |      | 549.92
```

Example: using ROLLUP with the HAVING clause

This example shows how to use the HAVING clause with ROLLUP to restrict the GROUP BY results. The following query produces only those ROLLUP categories where year is subtotaled, based on the expression in the GROUPING function:

```
=> SELECT Category, Year, SUM(Amount) FROM expenses
  GROUP BY ROLLUP(Category,Year) HAVING GROUPING(Year)=1
  ORDER BY 1, 2, GROUPING_ID();
 Category    | Year |  SUM
-------------+------+--------
 Books       |      |  99.96
 Electricity |      | 449.96
             |      | 549.92
```

The next example rolls up on (Category , Year), but not on the full results. The GROUPING_ID function specifies to aggregate less than three levels:

```
=> SELECT Category, Year, SUM(Amount) FROM expenses
  GROUP BY ROLLUP(Category,Year) HAVING GROUPING_ID(Category,Year)<3
  ORDER BY 1, 2, GROUPING_ID();
 Category    | Year |  SUM
-------------+------+--------
 Books       | 2005 |  39.98
 Books       | 2007 |  29.99
 Books       | 2008 |  29.99
 Books       |      |  99.96
 Electricity | 2005 | 109.99
 Electricity | 2006 | 109.99
 Electricity | 2007 | 229.98
 Electricity |      | 449.96
```

- GROUPING SETS aggregate

HAVING clause

Filters the results of a GROUP BY clause . Semantically, the HAVING clause occurs after the GROUP BY operation. It was added to the SQL standard because a WHERE clause cannot specify aggregate functions .

Syntax

```
HAVING condition[,...]
```

Parameters

condition

Unambiguously references a grouping column, unless the reference appears in an aggregate function.

Examples

The following example returns the employees with salaries greater than $800,000:

```
=> SELECT employee_last_name, MAX(annual_salary) as highest_salary FROM employee_dimension
   GROUP BY employee_last_name HAVING MAX(annual_salary) > 800000 ORDER BY highest_salary DESC;
 employee_last_name | highest_salary
--------------------+----------------
 Sanchez            |         992363
 Vogel              |         983634
 Vu                 |         977716
 Lewis              |         957949
 Taylor             |         953373
 King               |         937765
 Gauthier           |         927335
 Garnett            |         903104
 Bauer              |         901181
 Jones              |         885395
 Rodriguez          |         861647
 Young              |         846657
 Greenwood          |         837543
 Overstreet         |         831317
 Garcia             |         811231
(15 rows)
```

INTERSECT clause

Calculates the intersection of the results of two or more SELECT queries. INTERSECT returns distinct values by both the query on the left and right sides of the INTERSECT operand.

Syntax

```
select-stmt
   INTERSECT query[...]
   [ order-by-clause  [ offset-clause ]]
   [ limit-clause ]
```

Notes

- Use the INTERSECT clause to return all elements that are common to the results of all the SELECT queries. The INTERSECT query operates on the results of two or more SELECT queries. INTERSECT returns only the rows that are returned by all the specified queries.
- You cannot use the ALL keyword with an INTERSECT query.
- The results of each SELECT query must be union compatible; they must return the same number of columns, and the corresponding columns must have compatible data types. For example, you cannot use the INTERSECT clause on a column of type INTEGER and a column of type VARCHAR. If the SELECT queries do not meet these criteria, Vertica returns an error.

  > **Note**
  > The Data type coercion chart lists the data types that can be cast to other data types. If one data type can be cast to the other, those two data types are compatible.

- Order the results of an INTERSECT operation by using an ORDER BY clause. In the ORDER BY list, specify the column names from the leftmost SELECT statement or specify integers that indicate the position of the columns by which to sort.
- You can use INTERSECT in FROM, WHERE, and HAVING clauses.
- The rightmost ORDER BY, LIMIT, or OFFSET clauses in an INTERSECT query do not need to be enclosed in parentheses because the rightmost query specifies that Vertica perform the operation on the results of the INTERSECT operation. Any ORDER BY, LIMIT, or OFFSET clauses contained in SELECT queries that appear earlier in the INTERSECT query must be enclosed in parentheses.
- The order by column names is from the first select.
- Vertica supports INTERSECT noncorrelated subquery predicates. For example:

```
=> SELECT * FROM T1
  WHERE T1.x IN
    (SELECT MAX(c1) FROM T2
     INTERSECT
       SELECT MAX(cc1) FROM T3
     INTERSECT
       SELECT MAX(d1) FROM T4);
```

Examples

Consider the following three tables:

Company_A

```
id      emp_lname     dept          sales
------+------------+----------------+-------
1234  | Stephen    | auto parts     | 1000
5678  | Alice      | auto parts     | 2500
9012  | Katherine  | floral         |  500
3214  | Smithson   | sporting goods | 1500
```

Company_B

```
id      emp_lname     dept        sales
------+------------+-------------+-------
4321  | Marvin     | home goods  |   250
9012  | Katherine  | home goods  |   500
8765  | Bob        | electronics | 20000
3214  | Smithson   | home goods  |  1500
```

Company_C

```
 id  | emp_lname |      dept      | sales
------+-----------+----------------+-------
 3214 | Smithson  | sporting goods |  1500
 5432 | Madison   | sporting goods |   400
 7865 | Cleveland | outdoor        |  1500
 1234 | Stephen   | floral         |  1000
```

The following query returns the IDs and last names of employees that exist in both Company_A and Company_B:

```
=> SELECT id, emp_lname FROM Company_A
   INTERSECT
   SELECT id, emp_lname FROM Company_B;
 id   | emp_lname
------+-----------
 3214 | Smithson
 9012 | Katherine
(2 rows)
```

The following query returns the same two employees in descending order of sales:

```
=> SELECT id, emp_lname, sales FROM Company_A
   INTERSECT
   SELECT id, emp_lname, sales FROM Company_B
   ORDER BY sales DESC;
 id  | emp_lname | sales
------+-----------+-------
 3214 | Smithson  |  1500
 9012 | Katherine |   500
(2 rows)
```

The following query returns the employee who works for both companies whose sales in Company_B are greater than 1000:

```
=> SELECT id, emp_lname, sales FROM Company_A
   INTERSECT
   (SELECT id, emp_lname, sales FROM company_B WHERE sales > 1000)
   ORDER BY sales DESC;
  id  | emp_lname | sales
------+-----------+-------
 3214 | Smithson  |  1500
(1 row)
```

In the following query returns the ID and last name of the employee who works for all three companies:

```
=> SELECT id, emp_lname FROM Company_A
    INTERSECT
   SELECT id, emp_lname FROM Company_B
   INTERSECT
   SELECT id, emp_lname FROM Company_C;
  id  | emp_lname
------+-----------
 3214 | Smithson
(1 row)
```

The following query shows the results of a mismatched data types; these two queries are not union compatible:

```
=> SELECT id, emp_lname FROM Company_A
    INTERSECT
   SELECT emp_lname, id FROM Company_B;
ERROR 3429:  For 'INTERSECT', types int and varchar are inconsistent
DETAIL:  Columns: id and emp_lname
```

Using the VMart example database, the following query returns information about all Connecticut-based customers who bought items online and whose purchase amounts were between $400 and $500:

```
=> SELECT customer_key, customer_name from public.customer_dimension
       WHERE customer_key IN (SELECT customer_key
         FROM online_sales.online_sales_fact
         WHERE sales_dollar_amount > 400
         INTERSECT
         SELECT customer_key FROM online_sales.online_sales_fact
         WHERE sales_dollar_amount > 500)
      AND customer_state = 'CT' ORDER BY customer_key;
 customer_key |     customer_name
--------------+------------------------
           39 | Sarah S. Winkler
           44 | Meghan H. Overstreet
           70 | Jack X. Cleveland
          103 | Alexandra I. Vu
          110 | Matt . Farmer
          173 | Mary R. Reyes
          188 | Steve G. Williams
          233 | Theodore V. McNulty
          250 | Marcus E. Williams
          294 | Samantha V. Young
          313 | Meghan P. Pavlov
          375 | Sally N. Vu
          384 | Emily R. Smith
          387 | Emily L. Garcia
...
```

The previous query and the next one are equivalent, and return the same results:

```
=> SELECT customer_key,customer_name FROM public.customer_dimension
    WHERE customer_key IN (SELECT customer_key
   FROM online_sales.online_sales_fact
     WHERE sales_dollar_amount > 400
     AND sales_dollar_amount < 500)
 AND customer_state = 'CT' ORDER BY customer_key;
```

- Subqueries

INTO TABLE clause

Creates a table from a query result set.

Syntax

Permanent table:

```
INTO [TABLE] [[database.]schema.]table
```

Temporary table:

```
INTO [scope] TEMP[ORARY] [TABLE] [[database.]schema.]table
  [ ON COMMIT { DELETE | PRESERVE } ROWS ]
```

Parameters

scope

Specifies visibility of a temporary table definition:

- GLOBAL (default): The table definition is visible to all sessions, and persists until you explicitly drop the table.
- LOCAL : The table definition is visible only to the session in which it is created, and is dropped when the session ends.

Regardless of this setting, retention of temporary table data is set by the keywords ON COMMIT DELETE ROWS and ON COMMIT PRESERVE ROWS (see below).

For more information, see Creating temporary tables .

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

table

The name of the table to create.

ON COMMIT { DELETE | PRESERVE } ROWS

Specifies whether data is transaction- or session-scoped:

- DELETE (default) marks the temporary table for transaction-scoped data. Vertica removes all table data after each commit.
- PRESERVE marks the temporary table for session-scoped data, which is preserved beyond the lifetime of a single transaction. Vertica removes all table data when the session ends.

Examples

The following SELECT statement has an INTO TABLE clause that creates table newTable from customer_dimension :

```
=> SELECT * INTO TABLE newTable FROM customer_dimension;
```

The following SELECT statement creates temporary table newTempTable . By default, temporary tables are created at a global scope, so its definition is visible to other sessions and persists until it is explicitly dropped. No customer_dimension data is copied into the new table, and Vertica issues a warning accordingly:

```
=> SELECT * INTO TEMP TABLE newTempTable FROM customer_dimension;
WARNING 4102:  No rows are inserted into table "public"."newTempTable" because
  ON COMMIT DELETE ROWS is the default for create temporary table
HINT:  Use "ON COMMIT PRESERVE ROWS" to preserve the data in temporary table
CREATE TABLE
```

The following SELECT statement creates local temporary table newTempTableLocal . This table is visible only to the session in which it was created, and is automatically dropped when the session ends. The INTO TABLE clause includes ON COMMIT PRESERVE ROWS , so Vertica copies all selection data into the new table:

```
=> SELECT * INTO LOCAL TEMP TABLE newTempTableLocal ON COMMIT PRESERVE ROWS
    FROM customer_dimension;
CREATE TABLE
```

LIMIT clause

Specifies the maximum number of result set rows to return, either from the entire result set, or from windows of a partitioned result set.

Syntax

Applied to entire result set:

```
LIMIT { num-rows | ALL }
```

Applied to windows of a partitioned result set:

```
LIMIT num-rows OVER ( PARTITION BY column-expr-x, ORDER BY column-expr-y [ASC | DESC]
```

Parameters

num-rows

The maximum number of rows to return.

ALL

Returns all rows, valid only when LIMIT is applied to the entire result set.

OVER()

Specifies how to partition and sort input data with respect to the current row. The input data is the result set that the query returns after it evaluates FROM, WHERE, GROUP BY, and HAVING clauses.

For details, see Using LIMIT with Window Partitioning below.

Limiting returned rows

LIMIT specifies to return only top-k rows from the queried dataset. Row precedence is determined by the query's ORDER BY clause .

Important

The following dependencies apply:

- Always use an ORDER BY clause with LIMIT. Otherwise, the query returns an undefined subset of the result set. The ORDER BY clause must precede LIMIT.
- When a SELECT statement specifies both LIMIT and OFFSET , Vertica first processes the OFFSET, and then applies LIMIT to the remaining rows.

For example, the following query returns the first 10 rows of data in table customer_dimension , as ordered by columns store_region and number_of_employees :

```
=> SELECT store_region, store_city||', '||store_state location, store_name, number_of_employees
    FROM store.store_dimension WHERE number_of_employees <= 12 ORDER BY store_region, number_of_employees LIMIT 10;
 store_region |    location    | store_name | number_of_employees
--------------+----------------+------------+---------------------
 East         | Stamford, CT   | Store219   |                  12
 East         | New Haven, CT  | Store66    |                  12
 East         | New York, NY   | Store122   |                  12
 MidWest      | South Bend, IN | Store134   |                  10
 MidWest      | Evansville, IN | Store30    |                  11
 MidWest      | Green Bay, WI  | Store27    |                  12
 South        | Mesquite, TX   | Store124   |                  10
 South        | Cape Coral, FL | Store18    |                  11
 South        | Beaumont, TX   | Store226   |                  11
 South        | Houston, TX    | Store33    |                  11
(10 rows)
```

Using LIMIT with window partitioning

You can use LIMIT to apply window partitioning on query results, and limit the number of rows that are returned in each window:

```
SELECT ... FROM dataset LIMIT num-rows OVER ( PARTITION BY column-expr-x, ORDER BY column-expr-y [ASC | DESC] )
```

where querying *dataset* returns *num-rows* rows in each *column-expr-x* partition with the highest or lowest values of *column-expr-y* .

For example, the following statement queries table store.store_dimension and specifies window partitioning on the result set. LIMIT is set to 2, so each window partition can display no more than two rows. The OVER clause specifies to partition the result set by store_region , where each partition window displays for one region the two stores with the smallest number of employees:

```
=> SELECT store_region, store_city||', '||store_state location, store_name, number_of_employees FROM store.store_dimension
    LIMIT 2 OVER (PARTITION BY store_region ORDER BY number_of_employees ASC);
 store_region |      location       | store_name | number_of_employees
--------------+---------------------+------------+---------------------
 West         | Norwalk, CA         | Store43    |                  10
 West         | Lancaster, CA       | Store95    |                  11
 East         | Stamford, CT        | Store219   |                  12
 East         | New York, NY        | Store122   |                  12
 SouthWest    | North Las Vegas, NV | Store170   |                  10
 SouthWest    | Phoenix, AZ         | Store228   |                  11
 NorthWest    | Bellevue, WA        | Store200   |                  19
 NorthWest    | Portland, OR        | Store39    |                  22
 MidWest      | South Bend, IN      | Store134   |                  10
 MidWest      | Evansville, IN      | Store30    |                  11
 South        | Mesquite, TX        | Store124   |                  10
 South        | Beaumont, TX        | Store226   |                  11
(12 rows)
```

MATCH clause

A SQL extension that lets you screen large amounts of historical data in search of event patterns, the MATCH clause provides subclasses for analytic partitioning and ordering and matches rows from the result table based on a pattern you define.

You specify a pattern as a regular expression, which is composed of event types defined in the DEFINE subclause, where each event corresponds to a row in the input table. Then you can search for the pattern within a sequence of input events. Pattern matching returns the contiguous sequence of rows that conforms to PATTERN subclause. For example, pattern P (A B* C) consist of three event types: A, B, and C. When Vertica finds a match in the input table, the associated pattern instance must be an event of type A followed by 0 or more events of type B, and an event of type C.

Pattern matching is particularly useful for clickstream analysis where you might want to identify users' actions based on their Web browsing behavior (page clicks). For details, see Event series pattern matching .

Syntax

```
MATCH ( [ PARTITION BY table-column ] ORDER BY table-column
   DEFINE event-name AS boolean-expr [,...]
   PATTERN pattern-name AS ( regexp )
   [ rows-match-clause ] )
```

Parameters

PARTITION BY

Defines the window data scope in which the pattern, defined in the PATTERN subclause, is matched. The partition clause partitions the data by matched patterns defined in the PATTERN subclause. For each partition, data is sorted by the ORDER BY clause. If the partition clause is omitted, the entire data set is considered a single partition.

ORDER BY

Defines the window data scope in which the pattern, defined in the PATTERN subclause, is matched. For each partition, the order clause specifies how the input data is ordered for pattern matching.

> **Note**
> The ORDER BY clause is mandatory.

DEFINE

Defines the boolean expressions that make up the event types in the regular expressions. For example:

```
DEFINE
 Entry    AS RefURL  NOT ILIKE '%website2.com%' AND PageURL ILIKE
                          '%website2.com%',
 Onsite   AS PageURL ILIKE     '%website2.com%' AND Action='V',

 Purchase AS PageURL ILIKE     '%website2.com%' AND Action='P'
```

The DEFINE subclause accepts a maximum of 52 events. See Event series pattern matching for examples.

event-name

Name of the event to evaluate for each row—in the earlier example, Entry, Onsite, Purchase .

> **Note**
> Event names are case insensitive and follow the same naming conventions as those used for tables and columns.

boolean-expr

Expression that returns true or false. boolean_expr can include Boolean operators and relational (comparison) operators. For example:

```
Purchase AS PageURL ILIKE '%website2.com%' AND Action = 'P'
```

PATTERN ***pattern-name***

Name of the pattern defined in the PATTERN subclause; for example, P is the pattern name defined below:

```
PATTERN P AS (...)
```

A PATTERN is a *search pattern* that is comprised of a name and a regular expression.

> **Note**
> Vertica supports one pattern per query.

regexp

A regular expression comprised of event types defined in the DEFINE subclause and one or more quantifiers below. When Vertica evaluates the MATCH clause, the regular expression identifies the rows that meet the expression criteria.

*	Match 0 or more times
*?	Match 0 or more times, not greedily
+	Match 1 or more times
+?	Match 1 or more times, not greedily
?	Match 0 or 1 time
??	Match 0 or 1 time, not greedily
*+	Match 0 or more times, possessive
++	Match 1 or more times, possessive
?+	Match 0 or 1 time, possessive
|	Alternation. Matches expression before or after the vertical bar. Similar to a Boolean or.

rows-match-clause

Specifies how to resolve more than one event evaluating to true for a single row, one of the following:

- ROWS MATCH ALL EVENTS : If more than one event evaluates to true for a single row, Vertica returns this error :

```
ERROR: pattern events must be mutually exclusive
HINT:  try using ROWS MATCH FIRST EVENT
```

- ROWS MATCH FIRST EVENT : If more than one event evaluates to true for a given row, Vertica uses the first event in the SQL statement for that row.

Pattern semantic evaluation

- The semantic evaluating ordering of the SQL clauses is: FROM -> WHERE -> PATTERN MATCH -> SELECT.
- Data is partitioned as specified in the PARTITION BY clause. If the partition clause is omitted, the entire data set is considered a single partition.
- For each partition, the order clause specifies how the input data is ordered for pattern matching.
- Events are evaluated for each row. A row could have 0, 1, or *N* events evaluate to true. If more than one event evaluates to true for the same row, Vertica returns a run-time error unless you specify ROWS MATCH FIRST EVENT. If you specify ROWS MATCH FIRST EVENT and more than one event evaluates to TRUE for a single row, Vertica chooses the event that was defined first in the SQL statement to be the event it uses for the row.
- Vertica performs pattern matching by finding the contiguous sequence of rows that conforms to the pattern defined in the PATTERN subclause.

For each match, Vertica outputs the rows that contribute to the match. Rows not part of the match (do not satisfy one or more predicates) are not output.

- Vertica reports only non-overlapping matches. If an overlap occurs, Vertica chooses the first match found in the input stream. After finding the match, Vertica looks for the next match, starting at the end of the previous match.
- Vertica reports the longest possible match, not a subset of a match. For example, consider pattern: A *B with input: AAAB. Because A uses the greedy regular expression quantifier (*), Vertica reports all A inputs (AAAB), not AAB, AB, or B.

Notes and restrictions

- DISTINCT and GROUP BY/HAVING clauses are not allowed in pattern match queries.
- The following expressions are not allowed in the DEFINE subclause:
  - Subqueries, such as DEFINE X AS c IN (SELECT c FROM table1)
  - Analytic functions, such as DEFINE X AS c < LEAD(1) OVER (ORDER BY 1)
  - Aggregate functions, such as DEFINE X AS c < MAX(1)
- You cannot use the same pattern name to define a different event; for example, the following is not allowed for X:

```
DEFINE   X AS c1 <  3
 X AS c1  >= 3
```

- Used with MATCH clause, Vertica Pattern matching functions provide additional data about the patterns it finds. For example, you can use the functions to return values representing the name of the event that matched the input row, the sequential number of the match, or a partition-wide unique identifier for the instance of the pattern that matched.

Examples

For examples, see Event series pattern matching .

In this section

- Event series pattern matching

Event series pattern matching

The SQL MATCH clause syntax lets you screen large amounts of historical data in search of event patterns. You specify a pattern as a regular expression and can then search for the pattern within a sequence of input events. MATCH provides subclauses for analytic data partitioning and ordering, and the pattern matching occurs on a contiguous set of rows.

Pattern matching is particularly useful for clickstream analysis where you might want to identify users' actions based on their Web browsing behavior (page clicks). A typical online clickstream funnel is:

Company home page -> product home page -> search -> results -> purchase online

Using this clickstream funnel, you can search for a match on the user's sequence of web clicks and identify that user:

- Landed on the company home page
- Navigated to the product page

- Ran a search
- Clicked a link from the search results
- Made a purchase

Clickstream funnel schema

The examples in this topic use this clickstream funnel and the following clickstream_log table schema:

```
=> CREATE TABLE clickstream_log (
  uid INT,             --user ID
  sid INT,             --browsing session ID, produced by previous sessionization computation
  ts TIME,              --timestamp that occurred during the user's page visit
  refURL VARCHAR(20),  --URL of the page referencing PageURL
  pageURL VARCHAR(20), --URL of the page being visited
  action CHAR(1)       --action the user took after visiting the page ('P' = Purchase, 'V' = View)
);

INSERT INTO clickstream_log VALUES (1,100,'12:00','website1.com','website2.com/home', 'V');
INSERT INTO clickstream_log VALUES (1,100,'12:01','website2.com/home','website2.com/floby', 'V');
INSERT INTO clickstream_log VALUES (1,100,'12:02','website2.com/floby','website2.com/shamwow', 'V');
INSERT INTO clickstream_log values (1,100,'12:03','website2.com/shamwow','website2.com/buy', 'P');
INSERT INTO clickstream_log values (2,100,'12:10','website1.com','website2.com/home', 'V');
INSERT INTO clickstream_log values (2,100,'12:11','website2.com/home','website2.com/forks', 'V');
INSERT INTO clickstream_log values (2,100,'12:13','website2.com/forks','website2.com/buy', 'P');
COMMIT;
```

Here's the clickstream_log table's output:

```
=> SELECT * FROM clickstream_log;
 uid | sid |    ts    |        refURL        |       pageURL        | action
-----+-----+----------+----------------------+----------------------+--------
   1 | 100 | 12:00:00 | website1.com         | website2.com/home    | V
   1 | 100 | 12:01:00 | website2.com/home    | website2.com/floby   | V
   1 | 100 | 12:02:00 | website2.com/floby   | website2.com/shamwow | V
   1 | 100 | 12:03:00 | website2.com/shamwow | website2.com/buy     | P
   2 | 100 | 12:10:00 | website1.com         | website2.com/home    | V
   2 | 100 | 12:11:00 | website2.com/home    | website2.com/forks   | V
   2 | 100 | 12:13:00 | website2.com/forks   | website2.com/buy     | P
(7 rows)
```

Examples

This example includes the Vertica Pattern matching functions to analyze users' browsing history over website2.com. It identifies patterns where the user performed the following tasks:

- Landed on website2.com from another web site (Entry)
- Browsed to any number of other pages (Onsite)
- Made a purchase (Purchase)

In the following statement, pattern P (Entry Onsite* Purchase) consist of three event types: Entry, Onsite, and Purchase. When Vertica finds a match in the input table, the associated pattern instance must be an event of type Entry followed by 0 or more events of type Onsite, and an event of type Purchase

```
=> SELECT uid,
      sid,
      ts,
      refurl,
      pageurl,
      action,
      event_name(),
      pattern_id(),
      match_id()
FROM clickstream_log
MATCH
 (PARTITION BY uid, sid ORDER BY ts
  DEFINE
    Entry    AS RefURL  NOT ILIKE '%website2.com%' AND PageURL ILIKE '%website2.com%',
    Onsite   AS PageURL ILIKE     '%website2.com%' AND Action='V',
    Purchase AS PageURL ILIKE     '%website2.com%' AND Action = 'P'
  PATTERN
    P AS (Entry Onsite* Purchase)
  ROWS MATCH FIRST EVENT);
```

In the output below, the first four rows represent the pattern for user 1's browsing activity, while the following three rows show user 2's browsing habits.

```
 uid | sid |    ts    |        refurl        |       pageurl        | action | event_name | pattern_id | match_id
-----+-----+----------+----------------------+----------------------+--------+------------+------------+----------
   1 | 100 | 12:00:00 | website1.com         | website2.com/home    | V      | Entry      |          1 |        1
   1 | 100 | 12:01:00 | website2.com/home    | website2.com/floby   | V      | Onsite     |          1 |        2
   1 | 100 | 12:02:00 | website2.com/floby   | website2.com/shamwow | V      | Onsite     |          1 |        3
   1 | 100 | 12:03:00 | website2.com/shamwow | website2.com/buy     | P      | Purchase   |          1 |        4
   2 | 100 | 12:10:00 | website1.com         | website2.com/home    | V      | Entry      |          1 |        1
   2 | 100 | 12:11:00 | website2.com/home    | website2.com/forks   | V      | Onsite     |          1 |        2
   2 | 100 | 12:13:00 | website2.com/forks   | website2.com/buy     | P      | Purchase   |          1 |        3
(7 rows)
```

See also

- MATCH clause
- Pattern matching functions

MINUS clause

MINUS is an alias for EXCEPT .

OFFSET clause

Omits a specified number of rows from the beginning of the result set.

Syntax

```
OFFSET rows
```

Parameters

start-row

Specifies the first row to include in the result set. All preceding rows are omitted.

Dependencies

- Use an ORDER BY clause with OFFSET. Otherwise, the query returns an undefined subset of the result set.
- OFFSET must follow the ORDER BY clause in a SELECT statement or UNION clause.
- When a SELECT statement or UNION clause specifies both LIMIT and OFFSET, Vertica first processes the OFFSET statement, and then applies the LIMIT statement to the remaining rows.

Examples

The following query returns 14 rows from the customer_dimension table:

```
=> SELECT customer_name, customer_gender FROM customer_dimension
   WHERE occupation='Dancer' AND customer_city = 'San Francisco' ORDER BY customer_name;
    customer_name     | customer_gender
----------------------+-----------------
 Amy X. Lang          | Female
 Anna H. Li           | Female
 Brian O. Weaver      | Male
 Craig O. Pavlov      | Male
 Doug Z. Goldberg     | Male
 Harold S. Jones      | Male
 Jack E. Perkins      | Male
 Joseph W. Overstreet | Male
 Kevin . Campbell     | Male
 Raja Y. Wilson       | Male
 Samantha O. Brown    | Female
 Steve H. Gauthier    | Male
 William . Nielson    | Male
 William Z. Roy       | Male
(14 rows)
```

If you modify the previous query to specify an offset of 8 (OFFSET 8), Vertica skips the first eight rows of the previous result set. The query returns the following results:

```
=> SELECT customer_name, customer_gender FROM customer_dimension
   WHERE occupation='Dancer' AND customer_city = 'San Francisco' ORDER BY customer_name OFFSET 8;
   customer_name   | customer_gender
-------------------+-----------------
 Kevin . Campbell  | Male
 Raja Y. Wilson    | Male
 Samantha O. Brown | Female
 Steve H. Gauthier | Male
 William . Nielson | Male
 William Z. Roy    | Male
(6 rows)
```

ORDER BY clause

Sorts a query result set on one or more columns or column expressions. Vertica uses the current locale and collation sequence to compare and sort string values.

> **Note**
> Vertica projection data is always stored sorted by the ASCII (binary) collating sequence.

Syntax

```
ORDER BY expression [ ASC | DESC ] [,...]
```

Parameters

expression

One of the following:

- Name or ordinal number of a SELECT list item. The ordinal number refers to the position of the result column, counting from the left beginning at one. Use them to order by a column whose name is not unique. Ordinal numbers are invalid for an ORDER BY clause of an analytic function's OVER clause .
- Arbitrary expression formed from columns that do not appear in the SELECT list
- CASE expression.

> **Note**
> You cannot use DISTINCT on a collection column if it is also included in the sort order.

ASC | DESC

Specifies whether to sort values in ascending or descending order. NULL values are either first or last in the sort order, depending on data type:

- INTEGER, INT, DATE/TIME: NULL has the smallest value.
- FLOAT, BOOLEAN, CHAR, VARCHAR, ARRAY, SET: NULL has the largest value

Examples

The follow example returns all the city and deal size for customer Metamedia, sorted by deal size in descending order.

```
=> SELECT customer_city, deal_siz FROM customer_dimension WHERE customer_name = 'Metamedia'
   ORDER BY deal_size DESC;
  customer_city   | deal_size
------------------+-----------
 El Monte         |   4479561
 Athens           |   3815416
 Ventura          |   3792937
 Peoria           |   3227765
 Arvada           |   2671849
 Coral Springs    |   2643674
 Fontana          |   2374465
 Rancho Cucamonga |   2214002
 Wichita Falls    |   2117962
 Beaumont         |   1898295
 Arvada           |   1321897
 Waco             |   1026854
 Joliet           |    945404
 Hartford         |    445795
(14 rows)
```

The following example uses a transform function. It returns an error because the ORDER BY column is not in the window partition.

```
=> CREATE TABLE t(geom geometry(200), geog geography(200));
=> SELECT PolygonPoint(geom) OVER(PARTITION BY geom)
   AS SEL_0 FROM t ORDER BY geog;
ERROR 2521: Cannot specify anything other than user defined transforms and partitioning expressions in the ORDER BY list
```

The following example, using the same table, corrects this error.

```
=> SELECT PolygonPoint(geom) OVER(PARTITION BY geom)
   AS SEL_0 FROM t ORDER BY geom;
```

The following example uses an array in the ORDER BY clause.

```
=> CREATE TABLE employees (id INT, department VARCHAR(50), grants ARRAY[VARCHAR], grant_values ARRAY[INT]);

=> COPY employees FROM STDIN;
42|Physics|[US-7376,DARPA-1567]|[65000,135000]
36|Physics|[US-7376,DARPA-1567]|[10000,25000]
33|Physics|[US-7376]|[30000]
36|Astronomy|[US-7376,DARPA-1567]|[5000,4000]
\.

=> SELECT * FROM employees ORDER BY grant_values;
 id | department |          grants           |  grant_values
----+------------+---------------------------+----------------
 36 | Astronomy  | ["US-7376","DARPA-1567"] | [5000,4000]
 36 | Physics    | ["US-7376","DARPA-1567"] | [10000,25000]
 33 | Physics    | ["US-7376"]              | [30000]
 42 | Physics    | ["US-7376","DARPA-1567"] | [65000,135000]
(4 rows)
```

TIMESERIES clause

Provides gap-filling and interpolation (GFI) computation, an important component of time series analytics computation. See Time series analytics for details and examples.

Syntax

```
TIMESERIES slice-time AS 'length-and-time-unit-expr' OVER (
 [ PARTITION BY column-expr[,...] ] ORDER BY time-expr ) [ ORDER BY table-column[,...] ]
```

Parameters

slice-time

A time column produced by the TIMESERIES clause, which stores the time slice start times generated from gap filling.

Note: This parameter is an alias, so you can use any name that an alias would take.

length-and-time-unit-expr

An INTERVAL DAY TO SECOND literal that specifies the length of time unit of time slice computation. For example:

```
TIMESERIES slice_time AS '3 seconds' ...
```

OVER()

Specifies partitioning and ordering for the function. OVER() also specifies that the time series function operates on a query result set—that is, the rows that are returned after the FROM , WHERE , GROUP BY , and HAVING clauses are evaluated.

PARTITION BY (*column-expr* [,...])

Partitions the data by the specified column expressions. Gap filling and interpolation is performed on each partition separately.

ORDER BY *time-expr*

Sorts the data by the TIMESTAMP expression *time-expr* , which computes the time information of the time series data.

> **Note**
> The TIMESERIES clause requires an ORDER BY operation on the timestamp column.

Notes

If the *window-partition-clause* is not specified in TIMESERIES OVER(), for each defined time slice, exactly one output record is produced; otherwise, one output record is produced per partition per time slice. Interpolation is computed there.

Given a query block that contains a TIMESERIES clause, the following are the semantic phases of execution (after evaluating the FROM and the optional WHERE clauses):

1. Compute *time-expression.*
2. Perform the same computation as the TIME_SLICE() function on each input record based on the result of *time-exp* and ' *length-and-time-unit-expr'* .
    1. Perform gap filling to generate time slices missing from the input.
    2. Name the result of this computation as *slice_time* , which represents the generated "time series" column (alias) after gap filling.
3. Partition the data by *expression* , *slice-time* . For each partition, do step 4.
4. Sort the data by *time-expr* . Interpolation is computed here.

There is semantic overlap between the TIMESERIES clause and the TIME_SLICE function with the following key differences:

- TIMESERIES only supports the interval qualifier DAY TO SECOND ; it does not allow YEAR TO MONTH .
- Unlike TIME_SLICE , the time slice length and time unit expressed in *length-and-time-unit-expr* must be constants so gaps in the time slices are well-defined.
- TIMESERIES performs gap filling; the TIME_SLICE function does not.
- TIME_SLICE can return the start or end time of a time slice, depending on the value of its fourth input parameter (*start-or-end*). TIMESERIES , on the other hand, always returns the start time of each time slice. To output the end time of each time slice, write a SELECT statement like the following:

```
=> SELECT slice_time + <slice_length>;
```

Restrictions

- When the TIMESERIES clause occurs in a SQL query block, only the following clauses can be used in the same query block:
    - SELECT
    - FROM
    - WHERE
    - ORDER BY

GROUP BY and HAVING clauses are not allowed. If a GROUP BY operation is needed before or after gap-filling and interpolation (GFI), use a subquery and place the GROUP BY In the outer query. For example:

```
=> SELECT symbol, AVG(first_bid) as avg_bid FROM (
     SELECT symbol, slice_time, TS_FIRST_VALUE(bid1) AS first_bid
     FROM Tickstore
     WHERE symbol IN ('MSFT', 'IBM')
     TIMESERIES slice_time AS '5 seconds' OVER (PARTITION BY symbol ORDER BY ts)
     ) AS resultOfGFI
GROUP BY symbol;
```

- When the TIMESERIES clause is present in the SQL query block, the SELECT list can include only the following:
  - Time series aggregate functions such as TS_FIRST_VALUE and TS_LAST_VALUE
  - *slice_time* column
  - PARTITION BY expressions
  - TIME_SLICE function

  For example, the following two queries return a syntax error because bid1 is not a PARTITION BY or GROUP BY column:

```
=> SELECT bid, symbol, TS_FIRST_VALUE(bid) FROM Tickstore
  TIMESERIES slice_time AS '5 seconds' OVER (PARTITION BY symbol ORDER BY ts);
  ERROR:  column "Tickstore.bid" must appear in the PARTITION BY list of Timeseries clause or be used in a Timeseries Output function
=> SELECT bid, symbol, AVG(bid) FROM Tickstore
  GROUP BY symbol;
  ERROR:  column "Tickstore.bid" must appear in the GROUP BY clause or be used in an aggregate function
```

Examples

For examples, see Gap filling and interpolation (GFI) .

See also

- TIME_SLICE
- TS_FIRST_VALUE
- TS_LAST_VALUE
- Gap filling and interpolation (GFI)

UNION clause

Combines the results of multiple SELECT statements. You can include UNION in FROM , WHERE , and HAVING clauses.

Syntax

```
select-stmt { UNION [ ALL | DISTINCT ] select-stmt }[...]
  [ order-by-clause  [ offset-clause ]]
  [ limit-clause ]
```

Parameters

select-stmt

A SELECT statement that returns one or more rows, depending on whether you specify keywords DISTINCT or ALL.

The following options also apply:

- The first SELECT statement can include the LABEL hint. Vertica ignores LABEL hints in subsequent SELECT statements.
- Each SELECT statement can specify its own ORDER BY , LIMIT , and OFFSET clauses. A SELECT statement with one or more of these clauses must be enclosed by parentheses. See also: ORDER BY, LIMIT, and OFFSET Clauses in UNION .

DISTINCT | ALL

Specifies whether to return unique rows:

- DISTINCT (default) returns only unique rows.
- ALL concatenates all rows, including duplicates. For best performance, use UNION ALL.

Requirements

- All rows of the UNION result set must be in the result set of at least one of its SELECT statements.
- Each SELECT statement must specify the same number of columns.
- Data types of corresponding SELECT statement columns must be compatible , otherwise Vertica returns an error.

ORDER BY, LIMIT, and OFFSET clauses in UNION

A UNION statement can specify its own ORDER BY , LIMIT , and OFFSET clauses. For example, given the tables described below in Examples , the following query orders the UNION result set by emp_name and limits output to the first two rows:

```
=> SELECT id, emp_name FROM company_a UNION ALL SELECT id, emp_name FROM company_b ORDER BY emp_name LIMIT 2;
 id  | emp_name
------+----------
 5678 | Alice
 8765 | Bob
(2 rows)
```

Each SELECT statement in a UNION clause can specify its own ORDER BY, LIMIT, and OFFSET clauses. In this case, the SELECT statement must be enclosed by parentheses. Vertica processes the SELECT statement ORDER BY, LIMIT, and OFFSET clauses before it processes the UNION clauses.

For example, each SELECT statement in the following UNION specifies its own ORDER BY and LIMIT clauses. Vertica processes the individual queries and then concatenates the two result sets:

```
=> (SELECT id, emp_name FROM company_a ORDER BY emp_name LIMIT 2)
   UNION ALL
   (SELECT id, emp_name FROM company_b ORDER BY emp_name LIMIT 2);
 id  | emp_name
------+-----------
 5678 | Alice
 9012 | Katherine
 8765 | Bob
 9012 | Katherine
(4 rows)
```

The following requirements and restrictions determine how Vertica processes a UNION clause that contains ORDER BY , LIMIT , and OFFSET clauses:

- A UNION's ORDER BY clause must specify columns from the first (leftmost) SELECT statement.
- Always use an ORDER BY clause with LIMIT and OFFSET. Otherwise, the query returns an undefined subset of the result set.
- ORDER BY must precede LIMIT and OFFSET.
- When a SELECT or UNION statement specifies both LIMIT and OFFSET, Vertica first processes the OFFSET statement, and then applies the LIMIT statement to the remaining rows.

UNION in non-correlated subqueries

Vertica supports UNION in noncorrelated subquery predicates . For example:

```
=> SELECT DISTINCT customer_key, customer_name FROM public.customer_dimension WHERE customer_key IN
    (SELECT customer_key FROM store.store_sales_fact WHERE sales_dollar_amount > 500
     UNION ALL
     SELECT customer_key FROM online_sales.online_sales_fact WHERE sales_dollar_amount > 500)
   AND customer_state = 'CT';
 customer_key |     customer_name
--------------+------------------------
         7021 | Luigi T. Dobisz
         1971 | Betty V. Dobisz
        46284 | Ben C. Gauthier
        33885 | Tanya Y. Taylor
         5449 | Sarah O. Robinson
        29059 | Sally Z. Fortin
        11200 | Foodhope
        15582 | John J. McNulty
        24638 | Alexandra F. Jones
...
```

Examples

The examples that follow use these two tables:

company_a

```
 ID    emp_name       dept       sales
------+------------+-------------+-------
1234  | Stephen    | auto parts  | 1000
5678  | Alice      | auto parts  | 2500
9012  | Katherine  | floral      |  500
```

company_b

```
 ID    emp_name       dept       sales
------+------------+-------------+-------
4321  | Marvin     | home goods  |   250
9012  | Katherine  | home goods  |   500
8765  | Bob        | electronics | 20000
```

Find all employee IDs and names from company_a and company_b

The UNION statement specifies DISTINCT to combine *unique* IDs and last names of employees; Katherine works for both companies, so she appears only once in the result set. DISTINCT is the default and can be omitted:

```
=> SELECT id, emp_name FROM company_a UNION DISTINCT SELECT id, emp_name FROM company_b ORDER BY id;
 id  | emp_name
------+-----------
 1234 | Stephen
 4321 | Marvin
 5678 | Alice
 8765 | Bob
 9012 | Katherine
(5 rows)
```

The next UNION statement specifies the option ALL. Katherine works for both companies, so the query returns two records for her:

```
=> SELECT id, emp_name FROM company_a UNION ALL SELECT id, emp_name FROM company_b ORDER BY id;
 id  | emp_name
------+-----------
 1234 | Stephen
 5678 | Alice
 9012 | Katherine
 4321 | Marvin
 9012 | Katherine
 8765 | Bob
(6 rows)
```

Find the top two top performing salespeople in each company

Each SELECT statement specifies its own ORDER BY and LIMIT clauses, so the UNION statement concatenates the result sets as returned by each query:

```
=> (SELECT id, emp_name, sales FROM company_a ORDER BY sales DESC LIMIT 2)
   UNION ALL
   (SELECT id, emp_name, sales FROM company_b ORDER BY sales DESC LIMIT 2);
 id  |  emp_name | sales
------+-----------+-------
 8765 | Bob       | 20000
 5678 | Alice     |  2500
 1234 | Stephen   |  1000
 9012 | Katherine |   500
(4 rows)
```

Find all employee orders by sales

The UNION statement specifies its own ORDER BY clause, which Vertica applies to the entire result:

```
=> SELECT id, emp_name, sales FROM company_a
   UNION
   SELECT id, emp_name, sales FROM company_b
   ORDER BY sales;
 id  |  emp_name | sales
------+-----------+-------
 4321 | Marvin    |   250
 9012 | Katherine |   500
 1234 | Stephen   |  1000
 5678 | Alice     |  2500
 8765 | Bob       | 20000
(5 rows)
```

Calculate the sum of sales for each company grouped by department

Each SELECT statement has its own GROUP BY clause. UNION combines the aggregate results from each query:

```
=> (SELECT 'Company A' as company, dept, SUM(sales) FROM company_a
    GROUP BY dept)
    UNION
   (SELECT 'Company B' as company, dept, SUM(sales) FROM company_b
    GROUP BY dept)
    ORDER BY 1;
 company   |    dept     | sum
-----------+-------------+-------
 Company A | auto parts  |  3500
 Company A | floral      |   500
 Company B | electronics | 20000
 Company B | home goods  |   750
(4 rows)
```

See also

- SELECT
- EXCEPT clause
- INTERSECT clause
- Subqueries

WHERE clause

Specifies which rows to include in a query's result set.

Syntax

```
WHERE boolean-expression [ subquery ]...
```

Parameters

boolean-expression

An expression that returns true or false. The result set only includes rows that evaluate to true. The expression can include boolean operators and the following elements:

- BETWEEN predicate
- Boolean predicate
- Column value predicate
- IN predicate
- Join predicate
- LIKE predicate
- NULL predicate

Use parentheses to group expressions, predicates, and boolean operators. For example:

```
... WHERE NOT (A=1 AND B=2) OR C=3;
```

Examples

The following example returns the names of all customers in the Eastern region whose name starts with the string Amer :

```
=> SELECT DISTINCT customer_name
   FROM customer_dimension
   WHERE customer_region = 'East'
   AND customer_name ILIKE 'Amer%';
 customer_name
---------------
 Americare
 Americom
 Americore
 Americorp
 Ameridata
 Amerigen
 Amerihope
 Amerimedia
 Amerishop
 Ameristar
 Ameritech
(11 rows)
```

WITH clause

A WITH clause defines one or more named common table expressions (CTEs), where each CTE encapsulates a result set that can be referenced by another CTE in the same WITH clause, or by the primary query. Vertica can execute the CTE on each reference (inline expansion), or materialize the result set as a temporary table that it reuses for all references. In both cases, WITH clauses can help simplify complicated queries and avoid statement repetition.

Syntax

```
WITH [ /*+ENABLE_WITH_CLAUSE_MATERIALIZATION */ ] [ RECURSIVE ] {
   cte-identifier [ ( column-aliases ) ] AS (
   [ subordinate-WITH-clause ]
   query-expression )
} [,...]
```

Parameters

/*+ENABLE_WITH_CLAUSE_MATERIALIZATION*/

Enables materialization of all queries in the current WITH clause. Otherwise, materialization is set by configuration parameter WithClauseMaterialization, by default set to 0 (disabled). If WithClauseMaterialization is disabled, materialization is automatically cleared when the primary query of the WITH clause returns. For details, see Materialization of WITH clause .

RECURSIVE

Specifies to iterate over the WITH clause's own result set, through repeated execution of an embedded UNION or UNION ALL statement. See Recursive Queries below.

cte-identifier

Identifies a common table expression (CTE) within a WITH clause. This identifier is available to CTEs of the same WITH clause, and of parent and child WITH clauses (if any). CTE identifiers of the outermost (primary) WITH clause are also available to the primary query.

All CTE identifiers of the same WITH clause must be unique. For example, the following WITH clause defines two CTEs, so they require unique identifiers: regional_sales and top_regions :

```
WITH
-- query sale amounts for each region
  regional_sales AS (SELECT ... ),
  top_regions AS ( SELECT ... )
  )
```

column-aliases

A comma-delimited list of result set column aliases. The list of aliases must map to all column expressions in the CTE query. If omitted, result set columns can only be referenced by the names used in the query.

In the following example, the revenue CTE specifies two column aliases: vkey and total_revenue . These map to column vendor_key and aggregate expression SUM(total_order_cost) , respectively. The primary query references these aliases:

```
WITH revenue ( vkey, total_revenue ) AS (
  SELECT vendor_key, SUM(total_order_cost)
  FROM store.store_orders_fact
  GROUP BY vendor_key ORDER BY vendor_key)

SELECT v.vendor_name, v.vendor_address, v.vendor_city, r.total_revenue
FROM vendor_dimension v JOIN revenue r ON v.vendor_key = r.vkey
WHERE r.total_revenue = (SELECT MAX(total_revenue) FROM revenue )
ORDER BY vendor_name;
```

subordinate-WITH-clause

A WITH clause that is nested within the current one. CTEs of this WITH clause can only reference CTEs of the same clause, and of parent and child WITH clauses.

Important

The primary query can only reference CTEs in the outermost WITH clause. It cannot reference the CTEs of any nested WITH clause.

query-expression

The query of a given CTE.

Restrictions

WITH clauses only support SELECT and INSERT statements. They do not support UPDATE or DELETE statements.

Recursive queries

A WITH clause that includes the RECURSIVE option iterates over its own output through repeated execution of a UNION or UNION ALL query. Recursive queries are useful when working with self-referential data—hierarchies such as manager-subordinate relationships, or tree-structured data such as taxonomies.

The configuration parameter WithClauseRecursionLimit —by default set to 8—sets the maximum depth of recursion. You can set this parameter at database and session scopes with ALTER DATABASE and ALTER SESSION, respectively. Recursion continues until it reaches the configured maximum depth, or until the last iteration returns with no data.

You specify a recursive WITH clause as follows:

```
WITH [ /*+ENABLE_WITH_CLAUSE_MATERIALIZATION*/ ] RECURSIVE
  cte-identifier [ ( column-aliases ) ] AS (
    non-recursive-term
    UNION [ ALL ]
    recursive-term
  )
```

Non-recursive and recursive terms are separated by UNION or UNION ALL:

- The *non-recursive-term* query sets its result set in *cte-identifier* , which is subject to recursion in *recursive-term* .
- The UNION statement's *recursive-term* recursively iterates over its own output. When recursion is complete, the results of all iterations are compiled and set in *cte-identifier* .

Restrictions

The following restrictions apply:

- The SELECT list of a non-recursive term cannot include the wildcard * (asterisk) or the function MATCH_COLUMNS .
- A recursive term can reference the target CTE only once.
- Recursive reference cannot appear within an outer join.
- Recursive reference cannot appear within a subquery.
- WITH clauses do not support UNION options ORDER BY, LIMIT, and OFFSET.

Examples

> **Note**
> For examples that show usage of recursive WITH clauses, see WITH clause recursion .

Single WITH clause with single CTE

The following SQL defines a WITH clause with one CTE, revenue , which aggregates data in table store.store_orders_fact . The primary query references the WITH clause result set twice: in its JOIN clause and predicate:

```
-- define WITH clause
WITH revenue ( vkey, total_revenue ) AS (
    SELECT vendor_key, SUM(total_order_cost)
    FROM store.store_orders_fact
    GROUP BY vendor_key ORDER BY 1)
-- End WITH clause

-- primary query
SELECT v.vendor_name, v.vendor_address, v.vendor_city, r.total_revenue
FROM vendor_dimension v JOIN revenue r ON v.vendor_key = r.vkey
WHERE r.total_revenue = (SELECT MAX(total_revenue) FROM revenue )
ORDER BY vendor_name;
  vendor_name    | vendor_address | vendor_city | total_revenue
-----------------+----------------+-------------+---------------
 Frozen Suppliers | 471 Mission St | Peoria      |      49877044
(1 row)
```

Single WITH clause and multiple CTEs

In the following example, the WITH clause contains two CTEs:

- regional_sales totals sales for each region
- top_regions uses the result set from regional_sales to identify the three regions with the highest sales:

The primary query aggregates sales by region and departments in the top_regions result set:

```
WITH
-- query sale amounts for each region
  regional_sales (region, total_sales) AS (
      SELECT sd.store_region, SUM(of.total_order_cost) AS total_sales
      FROM store.store_dimension sd JOIN store.store_orders_fact of ON sd.store_key = of.store_key
      GROUP BY store_region ),
-- query previous result set
  top_regions AS (
      SELECT region, total_sales
      FROM regional_sales ORDER BY total_sales DESC LIMIT 3
    )

-- primary query
-- aggregate sales in top_regions result set
SELECT sd.store_region AS region, pd.department_description AS department, SUM(of.total_order_cost) AS product_sales
FROM store.store_orders_fact of
JOIN store.store_dimension sd ON sd.store_key = of.store_key
JOIN public.product_dimension pd ON of.product_key = pd.product_key
WHERE sd.store_region IN (SELECT region FROM top_regions)
GROUP BY ROLLUP (region, department) ORDER BY region, product_sales DESC, GROUPING_ID();

 region  |          department          | product_sales
---------+------------------------------+---------------
 East    |                              |    1716917786
 East    | Meat                         |     189837962

West    | Canned Goods          |    163330813
West    | Cleaning supplies     |    148776443
West    | Dairy                 |    145244575
West    | Seafood               |    139464407
West    | Medical               |    126184049
West    | Pharmacy              |     91628523
        |                       |   5164234493
(43 rows)
```

INSERT statement that includes WITH clause

The following SQL uses a WITH clause to insert data from a JOIN query into table total_store_sales :

```
CREATE TABLE total_store_sales (store_key int, region VARCHAR(20), store_sales numeric (12,2));

INSERT INTO total_store_sales
WITH store_sales AS (
       SELECT sd.store_key, sd.store_region::VARCHAR(20), SUM (of.total_order_cost)
       FROM store.store_dimension sd JOIN store.store_orders_fact of ON sd.store_key = of.store_key
       GROUP BY sd.store_region, sd.store_key ORDER BY sd.store_region, sd.store_key)
SELECT * FROM store_sales;

=> SELECT * FROM total_store_sales ORDER BY region, store_key;
 store_key |  region   | store_sales
-----------+-----------+-------------
         2 | East      | 47668303.00
         6 | East      | 48136354.00
        12 | East      | 46673113.00
        22 | East      | 48711211.00
        24 | East      | 48603836.00
        31 | East      | 46836469.00
        36 | East      | 48461449.00
        37 | East      | 48018279.00
        41 | East      | 48713084.00
        44 | East      | 47808362.00
        49 | East      | 46990023.00
        50 | East      | 47643329.00
         9 | MidWest   | 46851087.00
        15 | MidWest   | 48787354.00

WITH clauses

SET statements

SET statements let you change how the database operates, such as changing the autocommit settings or the resource pool your session uses.

In this section

- SET DATESTYLE
- SET ESCAPE_STRING_WARNING
- SET INTERVALSTYLE
- SET LOCALE
- SET ROLE
- SET SEARCH_PATH
- SET SESSION AUTOCOMMIT
- SET SESSION CHARACTERISTICS AS TRANSACTION
- SET SESSION GRACEPERIOD
- SET SESSION IDLESESSIONTIMEOUT
- SET SESSION MEMORYCAP
- SET SESSION MULTIPLEACTIVERESULTSETS
- SET SESSION RESOURCE_POOL

- SET SESSION RUNTIMECAP
- SET SESSION TEMPSPACECAP
- SET STANDARD_CONFORMING_STRINGS
- SET TIME ZONE

SET DATESTYLE

Specifies how to format date/time output for the current session. Use SHOW DATESTYLE to verify the current output settings.

Syntax

```
SET DATESTYLE TO { arg | 'arg' }[, arg | 'arg' ]
```

Parameters

SET DATESTYLE has a single parameter, which can be set to one or two arguments that specify date ordering and style. Each argument can be specified singly or in combination with the other; if combined, they can be specified in any order.

The following table describes each style and the date ordering arguments it supports:

Date style arguments	Order arguments	Example
ISO (ISO 8601/SQL standard)	n/a	2016-03-16 00:00:00
GERMAN	n/a	16.03.2016 00:00:00
SQL	MDY	03/16/2016 00:00:00
	DMY (default)	16/03/2016 00:00:00
POSTGRES	MDY (default)	Wed Mar 16 00:00:00 2016
	DMY	Wed 16 Mar 00:00:00 2016

Vertica ignores the order argument for date styles ISO and GERMAN . If the date style is SQL or POSTGRES , the order setting determines whether dates are output in MDY or DMY order. Neither SQL nor POSTGRES support YMD order. If you specify YMD for SQL or POSTGRES , Vertica ignores it and uses their default MDY order.

Date styles and ordering can also affect how Vertica interprets input values. For more information, see Date/time literals .

Privileges

None

Input dependencies

In some cases, input format can determine output, regardless of date style and order settings:

- Vertica ISO output for DATESTYLE is ISO long form, but several input styles are accepted. If the year appears first in the input, YMD is used for input and output, regardless of the DATESTYLE value.
- INTERVAL input and output share the same format, with the following exceptions:
  - Units like CENTURY or WEEK are converted to years and days.
  - AGO is converted to the appropriate sign.

  If the date style is set to ISO, output follows this format:

  ```
  [ quantity unit [...] ] [ days ] [ hours:minutes:seconds ]
  ```

Examples

```
=> CREATE TABLE t(a DATETIME);
CREATE TABLE
=> INSERT INTO t values ('3/16/2016');
 OUTPUT
--------
      1
(1 row)

=> SHOW DATESTYLE;
   name    | setting
-----------+----------
 datestyle | ISO, MDY
(1 row)

=> SELECT * FROM t;
          a
----------------------
 2016-03-16 00:00:00
(1 row)

=> SET DATESTYLE TO German;
SET
=> SHOW DATESTYLE;
   name    |   setting
-----------+-------------
 datestyle | German, DMY
(1 row)

=> SELECT * FROM t;
          a
----------------------
 16.03.2016 00:00:00
(1 row)

=> SET DATESTYLE TO SQL;
SET
=> SHOW DATESTYLE;
   name    | setting
-----------+----------
 datestyle | SQL, DMY
(1 row)

=> SELECT * FROM t;
          a
----------------------
 16/03/2016 00:00:00
(1 row)

=> SET DATESTYLE TO Postgres, MDY;
SET
=> SHOW DATESTYLE;
   name    |    setting
-----------+---------------
 datestyle | Postgres, MDY
(1 row)

=> SELECT * FROM t;
           a
--------------------------
 Wed Mar 16 00:00:00 2016
(1 row)
```

SET ESCAPE_STRING_WARNING

Issues a warning when a backslash is used in a string literal during the current session .

Syntax

```
SET ESCAPE_STRING_WARNING TO { ON | OFF }
```

Parameters

ON

[Default] Issues a warning when a back slash is used in a string literal.

Tip: Organizations that have upgraded from earlier versions of Vertica can use this as a debugging tool for locating backslashes that used to be treated as escape characters, but are now treated as literals.

OFF

Ignores back slashes within string literals.

Privileges

None

Notes

- This statement works under vsql only.
- Turn off standard conforming strings before you turn on this parameter.

> **Tip**
> To set escape string warnings across all sessions, use the EscapeStringWarnings configuration parameter. See the Internationalization parameters .

Examples

The following example shows how to turn OFF escape string warnings for the session.

```
=> SET ESCAPE_STRING_WARNING TO OFF;
```

See also

- SET STANDARD_CONFORMING_STRINGS

SET INTERVALSTYLE

Specifies whether to include units in interval output for the current session .

Syntax

```
SET INTERVALSTYLE TO [ plain | units ]
```

Parameters

plain

(default) Sets the default interval output to omit units.

units

Enables interval output to include subtype unit identifiers . When INTERVALSTYLE is set to units, the DATESTYLE parameter controls output. If you enable units and they do not display in the output, check the DATESTYLE parameter value, which must be set to ISO or POSTGRES for interval units to display.

Privileges

None

Examples

See Setting interval unit display .

SET LOCALE

Specifies locale for the current session .

You can also set the current locale with the vsql command \locale .

Syntax

```
SET LOCALE TO ICU-locale-identifier
```

Parameters

locale-identifier

Specifies the ICU locale identifier to use, by default set to:

```
en_US@collation=binary
```

If set to an empty string, Vertica sets locale to en_US_POSIX .

The following requirements apply:

- Vertica only supports the COLLATION keyword.
- Single quotes are mandatory to specify collation.

Privileges

None

Commonly used locales

For details on identifier options, see About locale . For a complete list of locale identifiers, see the ICU Project .

de_DE
German (Germany)

en_GB
English (Great Britain)

es_ES
Spanish (Spain)

fr_FR
French (France)

pt_BR
Portuguese (Brazil)

pt_PT
Portuguese (Portugal)

ru_RU
Russian (Russia)

ja_JP
Japanese (Japan)

zh_CN
Chinese (China, simplified Han)

zh_Hant_TW
Chinese (Taiwan, traditional Han)

Examples

Set session locale to en_GB :

```
=> SET LOCALE TO en_GB;
INFO 2567:  Canonical locale: 'en_GB'
Standard collation: 'LEN'
English (United Kingdom)
SET
```

Use the short form of a locale:

```
=> SET LOCALE TO LEN;
INFO 2567:  Canonical locale: 'en'
Standard collation: 'LEN'
English
SET
```

Specify collation:

```
=> SET LOCALE TO 'tr_tr@collation=standard';
INFO 2567:  Canonical locale: 'tr_TR@collation=standard'
Standard collation: 'LTR'
Turkish (Turkey, collation=standard)  Türkçe (Türkiye, Sıralama=standard)
SET
```

See also

- Implement locales for international data sets
- About locale

SET ROLE

Enables a role for the user's current session. The user can access privileges that have been granted to the role. Enabling a role has no effect on roles that are currently enabled.

> **Tip**
> Use SHOW AVAILABLE ROLES to list granted roles.

Syntax

```
SET ROLE roles-expression
```

Parameters

roles-expression

Specifies what roles are the default roles for this user, with one of the following expressions:

- NONE (default): Disables all roles.
- *roles-list* : A comma-delimited list of roles to enable. You can only set roles that are currently granted to you.
- ALL [EXCEPT *roles-list*] : Enables all roles currently granted to this user, excluding any comma-delimited roles specified in the optional EXCEPT clause.
- DEFAULT : Enables all default roles of the current user, as set by ALTER USER...DEFAULT ROLE .

Privileges

None

Examples

This example shows the following:

- SHOW AVAILABLE_ROLES; lists the roles available to the user, but not enabled.
- SET ROLE applogs; enables the applogs role for the user.
- SHOW ENABLED_ROLES; lists the applogs role as enabled (SET) for the user.
- SET ROLE appuser; enables the appuser role for the user.
- SHOW ENABLED_ROLES now lists both applogs and appuser as enabled roles for the user.
- SET ROLE NONE disables all the users' enabled roles .
- SHOW ENABLED_ROLES shows that no roles are enabled for the user.

```
=> SHOW AVAILABLE_ROLES;
     name       |          setting
----------------+----------------------------
 available roles | applogs, appadmin, appuser
(1 row)

=> SET ROLE applogs;
SET
=> SHOW ENABLED_ROLES;
    name      | setting
--------------+---------
 enabled roles | applogs
(1 row)

=> SET ROLE appuser;
SET
=> SHOW ENABLED_ROLES;
    name      |     setting
--------------+------------------
 enabled roles | applogs, appuser
(1 row)

=> SET ROLE NONE;
SET

=> SHOW ENABLED_ROLES;
    name      | setting
--------------+---------
 enabled roles |
(1 row)
```

Set User Default Roles

Though the DBADMIN user is normally responsible for setting a user's default roles, as a user you can set your own role. For example, if you run SET ROLE NONE all of your enabled roles are disabled. Then it was determined you need access to role1 as a default role. The DBADMIN uses ALTER USER to assign you a default role:

```
=> ALTER USER user1 default role role1;
```

This example sets role1 as user1's default role because the DBADMIN assigned this default role using ALTER USER.

```
user1 => SET ROLE default;
user1 => SHOW ENABLED_ROLES;
   name      | setting
-------------------------
enabled roles |   role1
(1 row)
```

Set All Roles as Default

This example makes all roles granted to user1 default roles:

```
user1 => SET ROLE all;
user1 => show enabled roles;
   name      |   setting
-----------------------------------
enabled roles | role1, role2, role3
(1 row)
```

Set All Roles as Default With EXCEPT

This example makes all the roles granted to the user default roles with the exception of role1.

```
user1 => set role all except role1;
user1 => SHOW ENABLED_ROLES
    name     | setting
-----------------------------
enabled roles | role2, role3
(1 row)
```

SET SEARCH_PATH

Specifies the order in which Vertica searches schemas when a SQL statement specifies a table name that is unqualified by a schema name. SET SEARCH_PATH overrides the current session's search path, which is initially set from the user profile. This search path remains in effect until the next SET SEARCH_PATH statement, or the session ends. For details, see Setting search paths .

To view the current search path, use SHOW SEARCH_PATH .

Syntax

```
SET SEARCH_PATH { TO | = } { schema-list | DEFAULT }
```

Parameters

schema-list

A comma-delimited list of schemas that indicates the order in which Vertica searches schemas for a table whose name is unqualified by a schema name.

If the search path includes a schema that does not exist, or for which the user lacks access privileges, Vertica silently skips over that schema.

DEFAULT

Sets the search path to the database default:

```
"$user", public, v_catalog, v_monitor, v_internal
```

Privileges

None

Examples

Show the current search path:

```
=> SHOW SEARCH_PATH;
   name     |                    setting
------------+-------------------------------------------------
 search_path | "$user", public, v_catalog, v_monitor, v_internal
(1 row)
```

Reset the search path to schemas store and public :

```
=> SET SEARCH_PATH TO store, public;
=> SHOW SEARCH_PATH;
   name     |                   setting
------------+-------------------------------------------------
 search_path | store, public, v_catalog, v_monitor, v_internal
(1 row)
```

Reset the search path to the database default settings:

```
=> SET SEARCH_PATH TO DEFAULT;
SET
=> SHOW SEARCH_PATH;
   name     |                    setting
------------+-------------------------------------------------
 search_path | "$user", public, v_catalog, v_monitor, v_internal
(1 row)
```

SET SESSION AUTOCOMMIT

Sets whether statements automatically commit their transactions on completion. This statement is primarily used by the client drivers to enable and disable autocommit, you should never have to directly call it.

Syntax

```
SET SESSION AUTOCOMMIT TO { ON | OFF }
```

Parameters

ON

Enable autocommit. Statements automatically commit their transactions when they complete. This is the default setting for connections made using the Vertica client libraries.

OFF

Disable autocommit. Transactions are not automatically committed. This is the default for interactive sessions (connections made through vsql).

Privileges

None

Examples

This examples show how to set AUTOCOMMIT to 'on' and then to 'off'.

```
=> SET SESSION AUTOCOMMIT TO on;
SET
=> SET SESSION AUTOCOMMIT TO off;
SET
```

See also

- Client libraries

SET SESSION CHARACTERISTICS AS TRANSACTION

Sets the isolation level and access mode of all transactions that start after this statement is issued.

A transaction retains its isolation level until it completes, even if the session's isolation level changes during the transaction. Vertica internal processes (such as the Tuple Mover and refresh operations) and DDL operations always run at the SERIALIZABLE isolation level to ensure consistency.

Syntax

```
SET SESSION CHARACTERISTICS AS TRANSACTION settings
```

settings

One or both of the following:

- ISOLATION LEVEL *argument*
- [READ ONLY | READ WRITE](#ReadWrite)

ISOLATION LEVEL arguments

The ISOLATION LEVEL clause determines what data the transaction can access when other transactions run concurrently. You cannot change the isolation level after the first query (SELECT) or DML statement (INSERT, DELETE, UPDATE) if a transaction has run.

Set ISOLATION LEVEL to one of the following arguments:

SERIALIZABLE

Sets the strictest level of SQL transaction isolation. This level emulates transactions serially, rather than concurrently. It holds locks and blocks write operations until the transaction completes.

Applications that use SERIALIZABLE must be prepared to retry transactions in the event of serialization failures. This isolation level is not recommended for normal query operations.
Setting the transaction isolation level to SERIALIZABLE does not apply to temporary tables. Temporary tables are isolated by their transaction scope.

REPEATABLE READ

Automatically converted to SERIALIZABLE .

READ COMMITTED

Default, allows concurrent transactions.

READ UNCOMMITTED

Automatically converted to READ COMMITTED .

READ WRITE/READ ONLY

You can set the transaction access mode with one of the following:

READ WRITE

Default, allows read/write access to SQL statements.

READ ONLY

Disallows SQL statements that require write access:

- INSERT, UPDATE, DELETE, and COPY operations on any non-temporary table.
- CREATE, ALTER, and DROP
- GRANT, REVOKE
- EXPLAIN if the SQL statement to explain requires write access.

> **Note**
> Setting the transaction session mode to read-only does not prevent all write operations.

Privileges

None

Viewing session transaction characteristics

SHOW TRANSACTION_ISOLATION and SHOW TRANSACTION_READ_ONLY show the transaction settings for the current session:

```
=> SHOW TRANSACTION_ISOLATION;
        name         |   setting
----------------------+--------------
 transaction_isolation | SERIALIZABLE
(1 row)

=> SHOW TRANSACTION_READ_ONLY;
        name         | setting
----------------------+---------
 transaction_read_only | true
(1 row)
```

SET SESSION GRACEPERIOD

Sets how long a session socket remains blocked while awaiting client input or output for a given query. If the socket is blocked for a continuous period that exceeds the grace period setting, the server shuts down the socket and throws a fatal error. The session is then terminated. If no grace period is set, the query can maintain its block on the socket indefinitely.

Vertica applies a session's grace period and RUNTIMECAP settings independently. If no grace period is set, a query can continue to block indefinitely on a session socket, regardless of the query's RUNTIMECAP setting.

Syntax

```
SET SESSION GRACEPERIOD duration
```

Parameters

duration

Specifies how long a query can block on any session socket, one of the following:

- ' *interval* ' : Specifies as an interval the maximum grace period for current session queries, up to 20 days.
- =DEFAULT : Sets the grace period for queries in this session to the user's GRACEPERIOD value. A new session is initially set to this value.
- NONE : Valid only for superusers, removes any grace period previously set on session queries.

Privileges

- Superusers can increase session grace period to any value, regardless of database or node settings.
- Non-superusers can only set the session grace period to a value equal to or lower than their own user setting. If no grace period is explicitly set for a user, the grace period for that user is inherited from the node or database settings.

Examples

See Handling session socket blocking in the Administrator's Guide.

SET SESSION IDLESESSIONTIMEOUT

Sets the maximum amount of time that a session can remain idle before it exits.

> **Note**
> An idle session has no queries running.

Syntax

```
SET SESSION IDLESESSIONTIMEOUT duration
```

Parameters

duration

Specifies the amount of time a session can remain idle before it exits:

- NONE (default): No idle timeout set on the session.
- ' *interval* ' : Specifies as an interval the maximum amount of time a session can remain idle.
- =DEFAULT : Sets the idle timeout period for this session to the user's IDLESESSIONTIMEOUT value.

Privileges

- Superusers can increase the time a session can remain idle to any value, regardless of database or node settings.
- Non-superusers can only set the session idle time to a value equal to or lower than their own user setting. If no session idle time is explicitly set for a user, the session idle time for that user is inherited from the node or database settings.

Examples

See Managing client connections in the Administrator's Guide.

SET SESSION MEMORYCAP

Limits how much memory can be allocated to any request in the current session . This limit only applies to the current session; it does not limit the total amount of memory used by multiple sessions.

Syntax

```
SET SESSION MEMORYCAP limit
```

Parameters

limit

One of the following:

- ' *max-expression* ': A string value that specifies the memory limit, one of the following:
  - *int* % — Expresses the maximum as a percentage of total memory available to the Resource manager , where *int* is an integer value between 0 and 100.For example:
    MEMORYCAP '40%'
  - *int* {K|M|G|T} — Expresses memory allocation in kilobytes, megabytes, gigabytes, or terabytes. For example:
    MEMORYCAP '10G'
- =DEFAULT : Sets the memory cap for queries in this session to the user's MEMORYCAP value.A new session is initially set to this value.
- NONE : Removes the memory cap for this session.

Privileges

- Superusers can increase session memory cap to any value.
- Non-superusers can only set the session memory cap to a value equal to or lower than their own user setting.

Examples

Set the session memory cap to 2 gigabytes:

```
=> SET SESSION MEMORYCAP '2G';
SET
=> SHOW MEMORYCAP;
   name    | setting
-----------+---------
 memorycap | 2097152
(1 row)
```

Revert the memory cap to the default setting as specified in the user profile:

```
=> SET MEMORYCAP=DEFAULT;
SET
=> SHOW MEMORYCAP;
   name    | setting
-----------+---------
 memorycap | 2013336
(1 row)
```

Managing workloads

SET SESSION MULTIPLEACTIVERESULTSETS

Enables or disable the execution of multiple active result sets (MARS) on a single JDBC connection. Using this option requires an active JDBC connection.

Syntax

```
SET SESSION MULTIPLEACTIVERESULTSETS TO { ON | OFF }
```

Parameters

ON

Enable MultipleActiveResultSets.Allows you to execute multiple result sets on a single connection.

OFF

Disable MultipleActiveResultSets. Allows only one active result set per connection.(Default value.)

Privileges

None

Examples

This example shows how you can set MultipleActiveResultSets to on and then to off:

```
=> SET SESSION MULTIPLEACTIVERESULTSETS TO on;
SET
=> SET SESSION MULTIPLEACTIVERESULTSETS TO off;
SET
```

SET SESSION RESOURCE_POOL

Associates the user session with the specified resource pool.

Syntax

```
SET SESSION RESOURCE_POOL = { pool-name | DEFAULT }
```

Parameters

pool-name

The name of an existing resource pool to associate with the current session.

DEFAULT

Sets the session's resource pool to the user's default resource pool.

Privileges

- Superusers can assign their session to any available resource pool.
- Non-superusers must have USAGE privileges for the resource pool.

Examples

This example sets ceo_pool as the session resource pool:

```
=> SET SESSION RESOURCE_POOL = ceo_pool;
SET
```

See also

- ALTER RESOURCE POOL

- CREATE RESOURCE POOL
- CREATE USER
- DROP RESOURCE POOL
- GRANT (Resource pool)
- SET SESSION MEMORYCAP
- Managing workloads

SET SESSION RUNTIMECAP

Sets the maximum amount of time queries and stored procedures can run in a given session. If a query or stored procedure exceeds its session's RUNTIMECAP , Vertica terminates it and returns an error. You cannot increase the RUNTIMECAP beyond the limit that is set in your user profile .

> **Note**
> Vertica does not strictly enforce session RUNTIMECAP settings. If you time a query or stored procedure, you might discover that it runs longer than the RUNTIMECAP setting.

Syntax

```
SET SESSION RUNTIMECAP duration
```

Parameters

duration

Specifies how long a given query can run in the current session, one of the following:

- NONE (default): Removes a runtime limit for all current session queries.
- ' *interval* ' : Specifies as an interval the maximum runtime for current session queries, up to one year—for example, 1 minute or 100 seconds .
- =DEFAULT : Sets maximum runtime for queries in this session to the user's RUNTIMECAP value.

Privileges

- Superusers can increase session RUNTIMECAP to any value.
- Non-superusers can only set the session RUNTIMECAP to a value equal to or lower than their own user RUNTIMECAP .

Examples

Set the maximum query runtime for the current session to 10 minutes:

```
=> SET SESSION RUNTIMECAP '10 minutes';
```

Revert the session RUNTIMECAP to your user default setting:

```
=> SET SESSION RUNTIMECAP =DEFAULT;
SET
=> SHOW RUNTIMECAP;
   name    | setting
-----------+-----------
 runtimecap | UNLIMITED
(1 row)
```

Set the RUNTIMECAP to 1 SECOND and run an anonymous procedure with an infinite loop :

```
=> SET SESSION RUNTIMECAP '1 SECOND';
SET

=> DO $$
BEGIN
   LOOP
   END LOOP;
END;
$$;

ERROR 0:  Query exceeded maximum runtime
HINT:  Change the maximum runtime using SET SESSION RUNTIMECAP
```

See also

- Setting a runtime limit for queries
- Managing workloads

SET SESSION TEMPSPACECAP

Sets the maximum amount of temporary file storage that any request issued by the session can consume. If a query's execution plan requires more storage space than the session TEMPSPACECAP, it returns an error.

Syntax

```
SET SESSION TEMPSPACECAP limit
```

Arguments

limit

The maximum amount of temporary file storage to allocate to the current session, one of the following:

- NONE (default): Unlimited temporary storage
- = DEFAULT : Session TEMPSPACECAP is set to the user's TEMPSPACECAP value.
- String that specifies the storage limit, one of the following:
  - *int* % expresses the maximum as a percentage of total temporary storage available to the Resource Manager, where *int* is an integer value between 0 and 100. For example:
    ```
    SET SESSION TEMPSPACECAP '40%';
    ```
  - *int* {K|M|G|T} expresses storage allocation in kilobytes, megabytes, gigabytes, or terabytes. For example:
    ```
    SET SESSION TEMPSPACECAP '10G';
    ```

Privileges

Non-superusers:

- Restricted to setting only their own sessions
- Session TEMPSPACECAP cannot be greater than their own TEMPSPACECAP .

Examples

Set the session TEMPSPACECAP to 20 gigabytes:

```
=> SET SESSION TEMPSPACECAP '20G';
SET
=> SHOW TEMPSPACECAP;
    name     | setting
-------------+----------
 tempspacecap | 20971520
(1 row)
```

> **Note**
> SHOW displays the TEMPSPACECAP in kilobytes.

Set the session TEMPSPACECAP to unlimited:

```
=> SET SESSION TEMPSPACECAP NONE;
SET
=> SHOW TEMPSPACECAP;
    name     |  setting
-------------+-----------
 tempspacecap | UNLIMITED
(1 row)
```

SET STANDARD_CONFORMING_STRINGS

Specifies whether to treat backslashes as escape characters for the current session. By default, Vertica conforms to the SQL standard and supports SQL:2008 string literals within Unicode escapes.

Syntax

```
SET STANDARD_CONFORMING_STRINGS TO { ON | OFF }
```

Parameters

ON

(Default) Treat ordinary string literals ('...') as backslashes () literally. This means that backslashes are treated as string literals and not as escape characters.

OFF

Treat backslashes as escape characters.

Privileges

None

Requirements

- This statement works under vsql only.
- Standard-conforming strings must be ON to use Unicode-style string literals (U&'\nnnn').

> **Tip**
> You can set conforming strings across all sessions by setting the configuration parameter StandardConformingStrings with ALTER DATABASE...SET PARAMETER .

Examples

Turn off conforming strings for the session:

```
=> SET STANDARD_CONFORMING_STRINGS TO OFF;
```

Verify the current setting:

```
=> SHOW STANDARD_CONFORMING_STRINGS;
          name           | setting
-------------------------------+---------
 standard_conforming_strings | off
(1 row)
```

Turn on conforming strings for the session:

```
=> SET STANDARD_CONFORMING_STRINGS TO ON;
```

See also

- SET ESCAPE_STRING_WARNING
- Standard-Conforming Strings and Escape Characters

SET TIME ZONE

Changes the TIME ZONE run-time parameter for the current session . Use SHOW TIMEZONE to show the session's current time zone.

If you set the timezone using POSIX format, the timezone abbreviation you use overrides the default timezone abbreviation. If the date style is set to POSTGRES, the timezone abbreviation you use is also used when converting a timestamp to a string.

Syntax

```
SET TIME ZONE [TO] { value | 'value' }
```

> **Note**
> Vertica treats literals TIME ZONE and TIMEZONE as synonyms.

Parameters

value

One of the following:

- A time zone literal supported by Vertica. To view the default list of valid literals, see the files in the following directory:

```
/opt/vertica/share/timezonesets
```

- A signed integer representing an offset from UTC in hours
- A time zone literal with a signed integer offset. For example:

```
=> SET TIME ZONE TO 'America/New York -3'; -- equivalent to Pacific time
```

> **Note**
> Only valid timezone+offset combinations are meaningful as arguments to SET TIME ZONE. However, Vertica does not return an error for meaningless combinations—for example, America/NewYork + 150 .

- An interval value
- Constants LOCAL and DEFAULT , which respectively set the time zone to the one specified in environment variable TZ , or if TZ is undefined, to the operating system time zone.

Only valid (timezone+offset) combination are acceptable as parameter for this function.

Privileges

None

Examples

```
=> SET TIME ZONE TO DEFAULT;
=> SET TIME ZONE TO 'PST8PDT'; -- Berkeley, California
=> SET TIME ZONE TO 'Europe/Rome'; -- Italy
=> SET TIME ZONE TO '-7'; -- UDT offset equivalent to PDT
=> SET TIME ZONE TO INTERVAL '-08:00 HOURS';
```

See also

Using time zones with Vertica

In this section

- Time zone names for setting TIME ZONE

Time zone names for setting TIME ZONE

The time zone names listed below are recognized by Vertica as valid settings for the SQL time zone (the TIME ZONE run-time parameter).

> **Note**
> Time zone and daylight-saving rules are controlled by individual governments, and are subject to change. For the latest information, see Sources for Time Zone and Daylight Saving Time Data .

These names are not the same as the names shown in /opt/vertica/share/timezonesets , which are recognized by Vertica in date/time input values. The TIME ZONE names listed below imply a local Daylight Saving Time rule, where date/time input names represent a fixed offset from UTC.

In many cases, the same zone has several names. These are grouped together. The list is sorted primarily by commonly used zone names.

In addition to the names in the list, Vertica accepts time zone names as one of the following:

- *STDoffset*
- *STDoffsetDST*

where *STD* is a zone abbreviation, *offset* is a numeric offset in hours west from UTC, and *DST* is an optional Daylight Saving Time zone abbreviation, assumed to stand for one hour ahead of the given offset.

For example, if EST5EDT were not already a recognized zone name, Vertica accepts it as functionally equivalent to USA East Coast time. When a Daylight Saving Time zone name is present, Vertica assumes it uses USA time zone rules, so this feature is of limited use outside North America.

Caution
Be aware that this provision can lead to silently accepting invalid input, as there is no check on the reasonableness of the zone abbreviations. For example, SET TIME ZONE TO FOOBANKO works, leaving the system effectively using a rather peculiar abbreviation for GMT.

SHOW

Shows run-time parameters for the current session.

Syntax

```
SHOW { parameter | ALL }
```

Parameters

ALL

Shows all run-time settings.

AUTOCOMMIT

Returns on/off to indicate whether statements automatically commit their transactions when they complete.

AVAILABLE ROLES

Lists all roles available to the user.

DATESTYLE

Shows the current style of date values. See SET DATESTYLE .

ENABLED ROLES

Shows the roles enabled for the current session. See SET ROLE .

ESCAPE_STRING_WARNING

Returns on/off to indicate whether warnings are issued when backslash escapes are found in strings. See SET ESCAPE_STRING_WARNING .

GRACEPERIOD

Shows the session GRACEPERIOD set by SET SESSION GRACEPERIOD .

IDLESESSIONTIMEOUT

Shows how long the session can remain idle before it times out.

INTERVALSTYLE

Shows whether units are output when printing intervals. See SET INTERVALSTYLE .

LOCALE

Shows the current locale. See SET LOCALE .

MEMORYCAP

Shows the maximum amount of memory that any request use. See SET MEMORYCAP .

MULTIPLEACTIVERESULTSETS

Returns on/off to indicate whether multiple active result sets on one connection are allowed. See SET SESSION MULTIPLEACTIVERESULTSETS .

RESOURCE POOL

Shows the resource pool that the session is using. See SET RESOURCE POOL .

RUNTIMECAP

Shows the maximum amount of time that queries can run in the session. See SET RUNTIMECAP .

SEARCH_PATH

Shows the order in which Vertica searches schemas. See SET SEARCH_PATH . For example:

```
=> SHOW SEARCH_PATH;
   name    |                   setting
-----------+-------------------------------------------------
 search_path | "$user", public, v_catalog, v_monitor, v_internal
(1 row)
```

STANDARD_CONFORMING_STRINGS

Shows whether backslash escapes are enabled for the session. See SET STANDARD_CONFORMING_STRINGS .

TEMPSPACECAP

Shows the maximum amount of temporary file space that queries can use in the session. See SET TEMPSPACECAP .

TIMEZONE

Shows the timezone set in the current session. See SET TIMEZONE .

TRANSACTION_ISOLATION

Shows the current transaction isolation setting, as described in SET SESSION CHARACTERISTICS AS TRANSACTION . For example:

```
=> SHOW TRANSACTION_ISOLATION;
        name          |    setting
----------------------+----------------
 transaction_isolation | READ COMMITTED
(1 row)
```

TRANSACTION_READ_ONLY

Returns true/false to indicate the current read-only setting, as described in SET SESSION CHARACTERISTICS AS TRANSACTION . For example:

```
=> SHOW TRANSACTION_READ_ONLY;
        name         | setting
----------------------+---------
 transaction_read_only | false
(1 row)
```

Privileges

None

Examples

Display all current runtime parameter settings:

```
=> SHOW ALL;
           name            |                        setting
-----------------------------+-----------------------------------------------------------
 locale                      | en_US@collation=binary (LEN_KBINARY)
 autocommit                  | off
 standard_conforming_strings | on
 escape_string_warning       | on
 multipleactiveresultsets    | off
 datestyle                   | ISO, MDY
 intervalstyle               | plain
 timezone                    | America/New_York
 search_path                 | "$user", public, v_catalog, v_monitor, v_internal, v_func
 transaction_isolation       | READ COMMITTED
 transaction_read_only       | false
 resource_pool               | general
 memorycap                   | UNLIMITED
 tempspacecap                | UNLIMITED
 runtimecap                  | UNLIMITED
 idlesessiontimeout          | UNLIMITED
 graceperiod                 | UNLIMITED
 enabled roles               | dbduser*, dbadmin*, pseudosuperuser*
 available roles             | dbduser*, dbadmin*, pseudosuperuser*
(19 rows)
```

SHOW CURRENT

Displays active configuration parameter values that are set at all levels. Vertica first checks values set at the session level. If a value is not set for a configuration parameter at the session level, Vertica next checks if the value is set for the node where you are logged in, and then checks the database level. If no values are set, SHOW CURRENT shows the default value for the configuration parameter. If the configuration parameter requires a restart to take effect, the active values shown might differ from the set values.

Syntax

```
SHOW CURRENT { parameter-name[,...] | ALL }
```

Parameters

parameter-name

Names of configuration parameters to show.

ALL

Shows all configuration parameters set at all levels.

Privileges

Non-superuser: SHOW CURRENT ALL returns masked parameter settings. Attempts to view specific parameter settings return an error.

Examples

Show configuration parameters and their settings at all levels.

```
=> SHOW CURRENT ALL;
level    |    name                    |setting
---------+----------------------------+---------
DEFAULT  | ActivePartitionCount       | 1
DEFAULT  | AdvanceAHMInterval         | 180
DEFAULT  | AHMBackupManagement        | 0
DATABASE | AnalyzeRowCountInterval    | 3600
SESSION  | ForceUDxFencedMode         | 1
NODE     | MaxClientSessions          | 0
...
```

SHOW DATABASE

Displays configuration parameter values that are set for the database.

Important
You can also get detailed information on configuration parameters, including their current and default values, by querying system table CONFIGURATION_PARAMETERS .

> **Note**
> If the configuration parameter is set but requires a database restart to take effect, the value shown might differ from the active value.

Syntax

```
SHOW DATABASE db-spec { parameter-name[,...] | ALL }
```

Parameters

db-spec

Specifies the current database, set to the database name or DEFAULT .

parameter-name

Names of one or more configuration parameters to show.Non-superusers can only specify parameters whose settings are not masked by SHOW DATABASE...ALL , otherwise Vertica returns an error.

If you specify a single parameter that is not set, SHOW DATABASE returns an empty row for that parameter.
To obtain the names of database-level parameters, query system table CONFIGURATION_PARAMETERS .

ALL

Shows all configuration parameters set at the database level.For non-superusers, Vertica masks settings of security parameters, which only superusers can access.

Privileges

- Superuser: Shows all database parameter settings.
- Non-superuser: Masks all security parameter settings, which only superusers can access. To determine which parameters require superuser privileges, query system table CONFIGURATION_PARAMETERS .

Examples

Show to a non-superuser all configuration parameters that are set on the database:

```
=> SHOW DATABASE DEFAULT ALL;
            name             | setting
---------------------------------+----------
 AllowNumericOverflow           | 1
 CopyFaultTolerantExpressions   | 1
 GlobalHeirUsername             | ********
 MaxClientSessions              | 50
 NumericSumExtraPrecisionDigits | 0
(6 rows)
```

Show settings for two configuration parameters:

```
=> SHOW DATABASE DEFAULT AllowNumericOverflow, NumericSumExtraPrecisionDigits;
            name             | setting
---------------------------------+---------
 AllowNumericOverflow           | 1
 NumericSumExtraPrecisionDigits | 0
(2 rows)
```

SHOW NODE

Displays configuration parameter values that are set for a node. If you specify a parameter that is not set, SHOW NODE returns an empty row for that parameter.

> **Note**
> If the configuration parameter is set but requires a database restart to take effect, the value shown might differ from the active value.

Syntax

```
SHOW NODE node-name { parameter-name [,...] | ALL }
```

Parameters

node-name

Name of the target node.

parameter-name

Names of one or more node-level configuration parameters. To obtain the names of node-level parameters, query system table CONFIGURATION_PARAMETERS .

ALL

Shows all configuration parameters set at the node level.

Privileges

None

Examples

View all configuration parameters and their settings for node v_vmart_node0001 :

```
=> SHOW NODE v_vmart_node0001 ALL;
          name           | setting
--------------------------+---------
 DefaultIdleSessionTimeout | 5 hour
 MaxClientSessions         | 20
```

SHOW SESSION

Displays configuration parameter values that are set for the current session. If you specify a parameter that is not set, SHOW SESSION returns an empty row for that parameter.

> **Note**
> If the configuration parameter is set but requires a database restart to take effect, the value shown might differ from the active value.

Syntax

```
SHOW SESSION { ALL | UDPARAMETER ALL }
```

Parameters

ALL

Shows all Vertica configuration parameters set at the session level.

UDPARAMETER ALL

Shows all parameters defined by user-defined extensions. These parameters are not shown in the CONFIGURATION_PARAMETERS table.

Privileges

None

Examples

View all Vertica configuration parameters and their settings for the current session. User-defined parameters are not included:

```
=> SHOW SESSION ALL;
name                        |                      setting
----------------------------+-------------------------------------------------
locale                      | en_US@collation=binary (LEN_KBINARY)
autocommit                  | off
standard_conforming_strings | on
escape_string_warning       | on
datestyle                   | ISO, MDY
intervalstyle               | plain
timezone                    | America/New_York
search_path                 | "$user", public, v_catalog, v_monitor, v_internal
transaction_isolation       | READ COMMITTED
transaction_read_only       | false
resource_pool               | general
memorycap                   | UNLIMITED
tempspacecap                | UNLIMITED
runtimecap                  | UNLIMITED
enabled roles               | dbduser*, dbadmin*, pseudosuperuser*
available roles             | dbduser*, dbadmin*, pseudosuperuser*
ForceUDxFencedMode          | 1
(17 rows)
```

SHOW USER

Displays configuration parameter settings for database users. To get the names of user-level parameters, query system table CONFIGURATION_PARAMETERS :

```
SELECT parameter_name, allowed_levels FROM configuration_parameters
    WHERE allowed_levels ilike '%USER%' AND parameter_name ilike '%depot%';
   parameter_name     |     allowed_levels
-------------------------+-------------------------
 UseDepotForWrites       | SESSION, USER, DATABASE
 DepotOperationsForQuery | SESSION, USER, DATABASE
 UseDepotForReads        | SESSION, USER, DATABASE
(3 rows)
```

Syntax

```
SHOW USER { user-name | ALL } [PARAMETER] { cfg-parameter [,...] | ALL }
```

Parameters

***user-name* | ALL**

Show parameter settings for the specified user, or for all users.

[PARAMETER] *parameter-list*

A comma-delimited list of user-level configuration parameters.

PARAMETER ALL

Show all configuration parameters that are set for the specified users.

Privileges

Non-superusers: Can view only their own configuration parameter settings.

Examples

The following example shows configuration parameter settings for two users, Yvonne and Ahmed:

```
=> SELECT user_name FROM v_catalog.users WHERE user_name != 'dbadmin';
 user_name
-----------
 Ahmed
 Yvonne
(2 rows)
```

```
=> SHOW USER Yvonne PARAMETER ALL;
  user  |        parameter        | setting
--------+-------------------------+---------
 Yvonne | DepotOperationsForQuery | Fetches
(1 row)

=> ALTER USER Yvonne SET PARAMETER UseDepotForWrites = 0;
ALTER USER
=> SHOW USER Yvonne PARAMETER ALL;
  user  |        parameter        | setting
--------+-------------------------+---------
 Yvonne | DepotOperationsForQuery | Fetches
 Yvonne | UseDepotForWrites       | 0
(2 rows)

=> ALTER USER Ahmed SET PARAMETER DepotOperationsForQuery = 'Fetches';
ALTER USER
=> SHOW USER ALL PARAMETER ALL;
  user  |        parameter        | setting
--------+-------------------------+---------
 Ahmed  | DepotOperationsForQuery | Fetches
 Yvonne | DepotOperationsForQuery | Fetches
 Yvonne | UseDepotForWrites       | 0
(3 rows)
```

See also

ALTER USER

START TRANSACTION

Starts a transaction block.

Syntax

```
START TRANSACTION [ isolation_level ]
```

where *isolation_level* is one of:

```
ISOLATION LEVEL { SERIALIZABLE | REPEATABLE READ | READ COMMITTED | READ UNCOMMITTED }READ { ONLY | WRITE }
```

Parameters

Isolation level, described in the following table, determines what data the transaction can access when other transactions are running concurrently. The isolation level cannot be changed after the first query (SELECT) or DML statement (INSERT , DELETE , UPDATE) has run. A transaction retains its isolation level until it completes, even if the session's isolation level changes during the transaction. Vertica internal processes (such as the Tuple Mover and refresh operations) and DDL operations always run at the SERIALIZABLE isolation level to ensure consistency.

WORK | TRANSACTION

Have no effect; they are optional keywords for readability.

ISOLATION LEVEL { | SERIALIZABLE | REPEATABLE READ | READ COMMITTED | READ UNCOMMITTED }

- SERIALIZABLE: Sets the strictest level of SQL transaction isolation. This level emulates transactions serially, rather than concurrently. It holds

locks and blocks write operations until the transaction completes. Not recommended for normal query operations.
- REPEATABLE READ: Automatically converted to SERIALIZABLE by Vertica.
- READ COMMITTED (Default): Allows concurrent transactions. Use READ COMMITTED isolation for normal query operations, but be aware that there is a subtle difference between them. See Transactions for more information.
- READ UNCOMMITTED: Automatically converted to READ COMMITTED by Vertica.

READ {WRITE | ONLY}

Determines whether the transaction is read/write or read-only. Read/write is the default.

Setting the transaction session mode to read-only disallows the following SQL commands, but does not prevent all disk write operations:

- INSERT, UPDATE, DELETE, and COPY if the table they would write to is not a temporary table
- All CREATE, ALTER, and DROP commands
- GRANT, REVOKE, and EXPLAIN if the command it would run is among those listed.

Privileges

None

Notes

BEGIN performs the same function as START TRANSACTION.

Examples

This example shows how to start a transaction.

```
= > START TRANSACTION ISOLATION LEVEL READ COMMITTED READ WRITE;
START TRANSACTION
=> CREATE TABLE sample_table (a INT);
CREATE TABLE
=> INSERT INTO sample_table (a) VALUES (1);
OUTPUT
--------
1
(1 row)
```

See also

- Transactions
- Creating and rolling back transactions
- COMMIT
- END
- ROLLBACK

TRUNCATE TABLE

Removes all storage associated with a table, while leaving the table definition intact. TRUNCATE TABLE auto-commits the current transaction after statement execution and cannot be rolled back.

TRUNCATE TABLE also performs the following actions:

- Removes all table history preceding the current epoch. After TRUNCATE TABLE returns, AT EPOCH queries on the truncated table return nothing.
- Drops all table - and partition -level statistics.

Syntax

```
TRUNCATE TABLE [[database.]schema.]table-name
```

Parameters

[*database.*] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** table-name ***

The name of the anchor table or temporary table to truncate. You cannot truncate an external table.

Privileges

Non-superuser:

- Table owner

- USAGE privileges on table schema

Examples

See Truncating tables .

See also

- DELETE
- DROP TABLE

UPDATE

Replaces the values of the specified columns in all rows for which a specified condition is true. All other columns and rows in the table are unchanged. If successful, UPDATE returns the number of rows updated. A count of 0 indicates no rows matched the condition.

Important

The Vertica implementation of UPDATE differs from traditional databases. It does not delete data from disk storage; it writes two rows, one with new data and one marked for deletion. Rows marked for deletion remain available for historical queries.

Syntax

```
UPDATE [[database.]schema.]table-reference [AS] alias
  SET set-expression [,...]
  [ FROM from-list ]
  [ where-clause ]
```

> **Note**
> UPDATE statements can also embed the following hints :
>
> - General: ALLNODES , EARLY_MATERIALIZATION , LABEL , SKIP_STATISTICS , VERBATIM
> - Join: SYNTACTIC_JOIN , DISTRIB , GBYTYPE , JTYPE , UTYPE
> - Projection: PROJS , SKIP_PROJS

Parameters

[*database* .] *schema*

Database and schema . The default schema is public . If you specify a database, it must be the current database.

*** table-reference ***

A table, one of the following:

- An optionally qualified table name with optional table aliases, column aliases, and outer joins.
- An outer join table.

You cannot update a projection.

*** alias ***

A temporary name used to reference the table.

SET *set-expression*

The columns to update from one or more set expressions. Each SET clause expression specifies a target column and its new value as follows:

```
column-name = { expression | DEFAULT }
```

where:

- * column-name * is any column that does not have primary key or foreign key referential integrity constraints and is not of a complex type. Native arrays are permitted.
- *expression* specifies a value to assign to the column. The expression can use the current values of this and other table columns. For example:

  ```
  => UPDATE T1 SET C1 = C1+1
  ```

- DEFAULT sets *column-name* to its default value, or is ignored if no default value is defined for this column.

UPDATE only modifies the columns specified by the SET clause. Unspecified columns remain unchanged.

FROM *from-list*

A list of table expressions, allowing columns from other tables to appear in the WHERE condition and the UPDATE expressions. This is similar to the list of tables that can be specified in the FROM clause of a SELECT command.

The FROM clause can reference the target table as follows:

```
FROM DEFAULT [join-type] JOIN table-reference [ ON join-predicate ]
```

DEFAULT specifies the table to update. This keyword can be used only once in the FROM clause, and it cannot be used elsewhere in the UPDATE statement.

Privileges

Table owner or user with GRANT OPTION is grantor.

- UPDATE privilege on table
- USAGE privilege on schema that contains the table
- SELECT privilege on the table when executing an UPDATE statement that references table column values in a WHERE or SET clause

Subqueries and joins

UPDATE supports subqueries and joins, which is useful for updating values in a table based on values that are stored in other tables. For details, see Subqueries in UPDATE and DELETE statements .

Committing successive table changes

Vertica follows the SQL-92 transaction model, so successive INSERT, UPDATE, and DELETE statements are included in the same transaction. You do not need to explicitly start this transaction; however, you must explicitly end it with COMMIT , or implicitly end it with COPY . Otherwise, Vertica discards all changes that were made within the transaction.

Restrictions

- If the joins specified in the FROM clause or WHERE predicate produce more than one copy of the row in the target table, the new value of the row in the table is chosen arbitrarily.
- You cannot update columns of complex types except for native arrays.
- If primary key, unique key, or check constraints are enabled for automatic enforcement in the target table, Vertica enforces those constraints when you load new data. If a violation occurs, Vertica rolls back the operation and returns an error.

Examples

In the fact table, modify the price column value for all rows where the cost column value is greater than 100:

```
=> UPDATE fact SET price = price - cost * 80 WHERE cost > 100;
```

In the retail.customer table, set the state column to NH when the CID column value is greater than 100:

```
=> UPDATE retail.customer SET state = 'NH' WHERE CID > 100;
```

To use table aliases in UPDATE queries, consider the following two tables:

```
=> SELECT * FROM result_table;
 cust_id |      address
---------+--------------------
      20 | Lincoln Street
      30 | Beach Avenue
      30 | Booth Hill Road
      40 | Mt. Vernon Street
      50 | Hillside Avenue
(5 rows)
=> SELECT * FROM new_addresses;
 new_cust_id | new_address
-------------+---------------
          20 | Infinite Loop
          30 | Loop Infinite
          60 | New Addresses
(3 rows)
```

The following query and subquery use table aliases to update the address column in result_table (alias r) with the new address from the corresponding column in the new_addresses table (alias n):

```
=> UPDATE result_table r
  SET address=n.new_address
  FROM new_addresses n
  WHERE r.cust_id = n.new_cust_id;
```

result_table shows the address field updates made for customer IDs 20 and 30:

```
=> SELECT * FROM result_table ORDER BY cust_id;
 cust_id |     address
---------+------------------
      20 | Infinite Loop
      30 | Loop Infinite
      30 | Loop Infinite
      40 | Mt. Vernon Street
      50 | Hillside Avenue
(5 rows)
```

You cannot use UPDATE to update individual elements of native arrays. Instead, replace the entire array value. The following example uses ARRAY_CAT to add an element to an array column:

```
=> SELECT * FROM singers;
 lname  | fname |                  bands
--------+-------+-----------------------------------------------
 Cher   |       | ["Sonny and Cher"]
 Jagger | Mick  | ["Rolling Stones"]
 Slick  | Grace | ["Jefferson Airplane","Jefferson Starship"]
(3 rows)

=> UPDATE singers SET bands=ARRAY_CAT(bands,ARRAY['something new'])
    WHERE lname='Cher';
 OUTPUT
--------
      1
(1 row)

=> SELECT * FROM singers;
 lname  | fname |                  bands
--------+-------+-----------------------------------------------
 Jagger | Mick  | ["Rolling Stones"]
 Slick  | Grace | ["Jefferson Airplane","Jefferson Starship"]
 Cher   |       | ["Sonny and Cher","something new"]
(3 rows)
```

Vertica system tables

Vertica provides system tables that let you monitor your database and evaluate settings of its objects. You can query these tables just as you do other tables, depending on privilege requirements.

See also

- Using system tables
- Monitoring Vertica

In this section

- V_CATALOG schema
- V_MONITOR schema

V_CATALOG schema

The system tables in this section reside in the v_catalog schema. These tables provide information (metadata) about the objects in a database; for example, tables, constraints, users, projections, and so on.

ACCESS_POLICY

Provides information about existing access policies .

Column Name	Data Type	Description
ACCESS_POLICY_OID	INTEGER	The unique identifier for the access policy.
TABLE_NAME	VARCHAR	Name of the table specified in the access policy.
IS_POLICY_ENABLED	BOOLEAN	Whether the access policy is enabled.
POLICY_TYPE	VARCHAR	The type of access policy assigned to the table: • Column Policy • Row Policy
EXPRESSION	VARCHAR	The expression used when creating the access policy.
COLUMN_NAME	VARCHAR	The column to which the access policy is assigned. Row policies apply to all columns in the table.
TRUST_GRANTS	BOOLEAN	If true, GRANT statements override the access policy when determining whether a user can perform DML operations on the column or row.

Privileges

By default, only the superuser can view this table. Superusers can grant non-superusers access to this table with the following statement. Non-superusers can only see rows for tables that they own:

```
=> GRANT SELECT ON access_policy TO PUBLIC
```

Examples

The following query returns all access policies on table public.customer_dimension :

```
=> \x
=> SELECT policy_type, is_policy_enabled, table_name, column_name, expression FROM access_policy WHERE table_name =
'public.customer_dimension';
-[ RECORD 1 ]-----+-------------------------------------------------------------------------------------------
policy_type       | Column Policy
is_policy_enabled | Enabled
table_name        | public.customer_dimension
column_name       | customer_address
expression        | CASE WHEN enabled_role('administrator') THEN customer_address ELSE '**************' END
```

ALL_TABLES

Provides summary information about tables in a Vertica database.

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR	The name of the schema that contains the table.
TABLE_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the table.
TABLE_NAME	VARCHAR	The table name.
TABLE_TYPE	VARCHAR	The type of table, which can be one of the following: • TABLE • SYSTEM TABLE • VIEW • GLOBAL TEMPORARY • LOCAL TEMPORARY
REMARKS	VARCHAR	A brief comment about the table. You define this field by using the COMMENT ON TABLE and COMMENT ON VIEW commands.

Examples

```
onenode=> SELECT DISTINCT table_name, table_type FROM all_tables

AUDIT_MANAGING_USERS_PRIVILEGES

Provides summary information about privileges, creating, modifying, and deleting users, and authentication changes. This table is a join of LOG_PARAMS , LOG_QUERIES , and LOG_TABLES filtered on the Managing_Users_Privileges category.

Column Name	Data Type	Description
ISSUED_TIME	VARCHAR	The time at which the query was executed.
USER_NAME	VARCHAR	Name of the user who issued the query at the time Vertica recorded the session.
USER_ID	INTEGER	Numeric representation of the user who ran the query.
HOSTNAME	VARCHAR	The hostname, IP address, or URL of the database server.

SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
AUDIT_TYPE	VARCHAR	The type of operation for the audit: • Query • Parameter • Table
AUDIT_TAG_NAME	VARCHAR	The tag name for the specific parameter, query, or table.
REQUEST_TYPE	VARCHAR	The type of query request. Examples include, but are not limited to: • QUERY • DDL • LOAD • UTILITY • TRANSACTION • PREPARE • EXECUTE • SET • SHOW
REQUEST_ID	INTEGER	The ID of the privilege request.
SUBJECT	VARCHAR	The name of the table or parameter that was queried or the subject of a query.
REQUEST	VARCHAR	Lists the privilege request.
SUCCESS	VARCHAR	Indicates whether or not the operation was successful.
CATEGORY	VARCHAR	The audit parent category, Managing_Users_Privileges.

CA_BUNDLES

Stores certificate authority (CA) bundles created by CREATE CA BUNDLE .

Column Name	Data Type	Description
OID	INTEGER	The object identifier.
NAME	VARCHAR	The name of the CA bundle.
OWNER	INTEGER	The OID of the owner of the CA bundle.
CERTIFICATES	INTEGER	The OIDs of the CA certificates inside the CA bundle.

Privileges

- See CA bundle OID, name, and owner: Superuser or owner of the CA bundle.
- See CA bundle contents: Owner of the bundle

Joining with CERTIFICATES

CA_BUNDLES only stores OIDs. Since operations on CA bundles require certificate and owner names, you can use the following query to map bundles to certificate and owner names:

```
=> SELECT user_name AS owner_name,
      owner     AS owner_oid,
      b.name    AS bundle_name,
      c.name    AS cert_name
FROM   (SELECT name,
               STRING_TO_ARRAY(certificates) :: array[INT] AS certs
        FROM   ca_bundles) b
      LEFT JOIN certificates c
             ON CONTAINS(b.certs, c.oid)
      LEFT JOIN users
             ON user_id = owner
ORDER  BY 1;

 owner_name |     owner_oid     | bundle_name  | cert_name
------------+-------------------+--------------+-----------
 dbadmin    | 45035996273704962 | ca_bundle    | root_ca
 dbadmin    | 45035996273704962 | ca_bundle    | ca_cert
(2 rows)
```

- DROP CA BUNDLE

CATALOG_SUBSCRIPTION_CHANGES

Lists the changes made to catalog subscriptions.

Column Name	Data Type	Description
EVENT_TIMESTAMP	TIMESTAMP	The time a catalog subscription changed.
SESSION_ID	VARCHAR	A unique numeric ID assigned by the Vertica catalog, which identifies the session for which profiling information is captured. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
USER_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the user.
USER_NAME	VARCHAR	The user who made changes to the subscriptions.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any. If a session is active but no transaction has begun, TRANSACTION_ID returns NULL.
SHARD_NAME	VARCHAR	The name of the shard.
SHARD_OID	INTEGER	The OID of the shard.
SUBSCRIBER_NODE_NAME	VARCHAR	The node name or names subscribed to the shard.
SUBSCRIBER_NODE_OID	INTEGER	The OID of the subscribing node or nodes.
OLD_STATE	VARCHAR	The previous state of the node subscription.
NEW_STATE	VARCHAR	The current state of the node subscription.
WAS_PRIMARY	BOOLEAN	Defines whether the node was the primary subscriber.
IS_PRIMARY	BOOLEAN	Defines whether the node is currently the primary subscriber.

CATALOG_VERSION	INTEGER	The version of the catalog at the time of the subscription change.

CATALOG_SYNC_STATE

Shows when an Eon Mode database node synchronized its catalog to communal storage.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
SYNC_CATALOG_VERSION	INTEGER	The version number of the catalog being synchronized.
EARLIEST_CHECKPOINT_VERSION	INTEGER	The earliest checkpoint that is maintained in communal storage.
SYNC_TRAILING_INTERVAL	INTEGER	The difference between the global catalog version and the synchronized catalog version for a node.
LAST_SYNC_AT	TIMESTAMPTZ	The date and time the last time the catalog was synchronized.

CATALOG_TRUNCATION_STATUS

Indicates how up to date the catalog is on communal storage. It is completely up to date when the current catalog version is the same as the catalog truncation version.

The catalog truncation version (CTV) is the version that Vertica cluster uses when it revives after a crash, shutdown, or hibernation. A cluster has only one CTV for all nodes in a cluster.

Column Name	Data Type	Description
CURRENT_CATALOG_VERSION	INTEGER	The version number of the catalog currently on the cluster.
TRUNCATION_CATALOG_VERSION	INTEGER	The version number as of the last time the catalog was synced on communal storage.

CERTIFICATES

Stores certificates created by CREATE CERTIFICATE .

Column Name	Data Type	Description
OID	INTEGER	The object identifier.
NAME	VARCHAR	The name of the certificate.
OWNER	INTEGER	The owner of the object.
SIGNED_BY	INTEGER	The OID of the signing certificate.
PRIVATE_KEY	INTEGER	The OID of the certificate's private key .
START_DATE	TIMESTAMPTZ	When the certificate becomes valid.
EXPIRATION_DATE	TIMESTAMPTZ	When the certificate expires.
ISSUER	VARCHAR	The signing CA.
SUBJECT	VARCHAR	The entity for which the certificate is issued.
SERIAL	VARCHAR	The certificate's serial number.

x509v3_EXTENSIONS	VARCHAR	Lists additional attributes specified during the certificate's creation. For more information on extensions, see the OpenSSL documentation .
CERTIFICATE_TEXT	VARCHAR	The contents of the certificate.

Examples

See Generating TLS certificates and keys .

CLIENT_AUTH

Provides information about client authentication methods.

Higher values indicate higher priorities. Vertica tries to authenticate a user with an authentication method in order of priority from highest to lowest. For example:

- A priority of 10 is higher than a priority of 5.
- A priority 0 is the lowest possible value.

Column Name	Data Type	Description
AUTH_OID	INTEGER	Unique identifier for the authentication method.
AUTH_NAME	VARCHAR	User-given name of the authentication method.
IS_AUTH_ENABLED	BOOLEAN	Indicates if the authentication method is enabled.
AUTH_HOST_TYPE	VARCHAR	The authentication host type, one of the following: • LOCAL • HOST • HOSTSSL • HOSTNOSSL
AUTH_HOST_ADDRESS	VARCHAR	If AUTH_HOST_TYPE is HOST, AUTH_HOST_ADDRESS is the IP address (or address range) of the remote host.
AUTH_METHOD	VARCHAR	Authentication method to be used. Valid values: • IDENT • GSS • HASH • LDAP • REJECT • TLS • TRUST
AUTH_PARAMETERS	VARCHAR	The parameter names and values assigned to the authentication method.
AUTH_PRIORITY	INTEGER	The priority specified for the authentication. Authentications with higher values are used first.
METHOD_PRIORITY	INTEGER	The priority of this authentication based on the AUTH_METHOD. Vertica only considers METHOD_PRIORITY when deciding between multiple authentication methods of equal AUTH_PRIORITY.

ADDRESS_PRIORITY	INTEGER	The priority of this authentication based on the specificity of the AUTH_HOST_ADDRESS, if any. More specific IP addresses (fewer zeros) are used first. Vertica only considers ADDRESS_PRIORITY when deciding between multiple authentication methods of equal AUTH_PRIORITY and METHOD_PRIORITY.

Examples

This example shows how to get information about each client authentication method that you created:

```
=> SELECT * FROM client_auth;
    auth_oid   |  auth_name  | is_auth_enabled | auth_host_type | auth_host_address | auth_method | auth_parameters | auth_priority | method_priority |
address_priority
-------------------+-------------+-----------------+----------------+-------------------+-------------+-----------------+---------------+-----------------+------------------
 45035996274059694 | v_gss       | True            | HOST           | 0.0.0.0/0         | GSS         |                 |             0 |               5 |               96
 45035996274059696 | v_trust     | True            | LOCAL          |                   | TRUST       |                 |             0 |               0 |                0
 45035996274059698 | v_ldap      | True            | HOST           | 10.19.133.123/    | LDAP        |                 |             0 |               5 |              128
 45035996274059700 | RejectNoSSL | True            | HOSTNOSSL      | 0.0.0.0/0         | REJECT      |                 |             0 |              10 |               96
 45035996274059702 | v_hash      | True            | LOCAL          |                   | HASH        |                 |             0 |               2 |                0
 45035996274059704 | v_tls       | True            | HOSTSSL        | 1.1.1.1/0         | TLS         |                 |             0 |               5 |               96
(6 rows)
```

CLIENT_AUTH_PARAMS

Provides information about client authentication methods that have parameter values assigned.

Column Name	Data Type	Description
AUTH_OID	INTEGER	A unique identifier for the authentication method.
AUTH_NAME	VARCHAR	Name that you defined for the authentication method.
AUTH_PARAMETER_NAME	VARCHAR	Parameter name required by the authentication method. Some examples are: • system_users • binddn_prefix • host
AUTH_PARAMETER_VALUE	VARCHAR	Value of the specified parameter.

Examples

This example shows how to retrieve parameter names and values for all authentication methods that you created. The authentication methods that have parameters are:

- v_ident
- v_ldap
- v_ldap1

```
=> SELECT * FROM CLIENT_AUTH_PARAMS;
    auth_oid     |   auth_name   | auth_parameter_name |    auth_parameter_value
-----------------+---------------+---------------------+-----------------------------
 45035996273741304 | v_ident       | system_users        | root
 45035996273741332 | v_gss         |                     |

(17 rows)
```

CLUSTER_LAYOUT

Shows the relative position of the actual arrangement of the nodes participating in the cluster and the fault groups (in an Enterprise Mode database) or subclusters (in an Eon Mode database) that affect them. Ephemeral nodes are not shown in the cluster layout ring because they hold no resident data.

Column Name	Data Type	Description
CLUSTER_POSITION	INTEGER	Position of the node in the cluster ring, counting forward from 0. **Note** An output value of 0 has no special meaning other than there are no nodes in position before the node assigned 0.
NODE_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog that identifies the node.
NODE_NAME	VARCHAR	The name of the node in the cluster ring. Only permanent nodes participating in database activity appear in the cluster layout. Ephemeral nodes are not shown in the output.
FAULT_GROUP_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog that identifies the fault group. This column can only have a value in an Enterprise Mode database. **Note** This value matches the FAULT_GROUP.MEMBER_ID value, but only if this node is in a fault group; otherwise the value is NULL.
FAULT_GROUP_NAME	VARCHAR	The name of the fault group for the node. This column can only have a value in an Enterprise Mode database.

FAULT_GROUP_TIER	INTEGER	The node's depth in the fault group tree hierarchy. For example if the node: • Is not in a fault group, output is null • Is in the top level fault group, output is 0 • Is in a fault group's child, output is 1 • Is a fault group's grandchild, output is 2 This column can only have a value in an Enterprise Mode database.
SUBCLUSTER_ID	INTEGER	Unique identifier for the subcluster. This column only has a value in an Eon Mode database.
SUBCLUSTER_NAME	VARCHAR	The name of the subcluster containing the node. This column only has a value in an Eon Mode database.

See also

Large cluster

COLUMNS

Provides table column information.

Column Name	Data Type	Description
TABLE_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the table.
TABLE_SCHEMA	VARCHAR	Schema name for which information is listed in the database.
TABLE_NAME	VARCHAR	Table name for which information is listed in the database.
IS_SYSTEM_TABLE	BOOLEAN	Specifies whether the table is a system table.
COLUMN_ID	VARCHAR	Catalog-assigned VARCHAR value that uniquely identifies a table column.
COLUMN_NAME	VARCHAR	The column name for which information is listed in the database.
DATA_TYPE	VARCHAR	Column's data type, for example VARCHAR(16) , INTEGER , or FLOAT . Arrays of primitive types show the name "Array[*type*]. Other complex types show the inline name of the type, such as _ct_45035996273833610. These names match the type_name column in the COMPLEX_TYPES table.
DATA_TYPE_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the data type.
DATA_TYPE_LENGTH	INTEGER	Maximum allowable length of the data type.
CHARACTER_MAXIMUM_LENGTH	VARCHAR	Maximum allowable length of the column.
NUMERIC_PRECISION	INTEGER	Number of significant decimal digits.
NUMERIC_SCALE	INTEGER	Number of fractional digits.
DATETIME_PRECISION	INTEGER	For TIMESTAMP data type, returns the declared precision; returns NULL if no precision was declared.
INTERVAL_PRECISION	INTEGER	Number of fractional digits retained in the seconds field.
ORDINAL_POSITION	INTEGER	Column position respective to other columns in the table.
IS_NULLABLE	BOOLEAN	Specifies whether the column can contain NULL values.

COLUMN_DEFAULT	VARCHAR	Expression set on a column with the constraint DEFAULT .
COLUMN_SET_USING	VARCHAR	Expression set on a column with the constraint SET USING .
IS_IDENTITY	BOOLEAN	Specifies whether the column is an IDENTITY column.

Examples

Retrieve table and column information from the COLUMNS table:

```
=> SELECT table_schema, table_name, column_name, data_type, is_nullable
   FROM columns WHERE table_schema = 'store'
   AND data_type = 'Date';
 table_schema |    table_name     |      column_name       | data_type | is_nullable
--------------+-------------------+------------------------+-----------+-------------
 store        | store_dimension   | first_open_date        | Date      | f
 store        | store_dimension   | last_remodel_date      | Date      | f
 store        | store_orders_fact | date_ordered           | Date      | f
 store        | store_orders_fact | date_shipped           | Date      | f
 store        | store_orders_fact | expected_delivery_date | Date      | f
 store        | store_orders_fact | date_delivered         | Date      | f
6 rows)
```

DATETIME_PRECISION is NULL because the table definition declares no precision:

```
=> CREATE TABLE c (c TIMESTAMP);
CREATE TABLE
=> SELECT table_name, column_name, datetime_precision FROM columns
   WHERE table_name = 'c';
 table_name | column_name | datetime_precision
------------+-------------+--------------------
 c          | c           |
(1 row)
```

DATETIME_PRECISION is 4 because the table definition declares precision as 4:

```
=> DROP TABLE c;
=> CREATE TABLE c (c TIMESTAMP(4));
CREATE TABLE
=> SELECT table_name, column_name, datetime_precision FROM columns
   WHERE table_name = 'c';
 table_name | column_name | datetime_precision
------------+-------------+--------------------
 c          | c           |                  4
```

An identity column is a sequence available only for numeric column types. To identify what column in a table, if any, is an identity column, search the COLUMNS table to find the identity column in a table testid:

```
=> CREATE TABLE testid (c1 IDENTITY(1, 1, 1000), c2 INT);
=> \x
Expanded display is on.
=> SELECT * FROM COLUMNS WHERE is_identity='t' AND table_name='testid';
-[ RECORD 1 ]------------+--------------------
table_id                 | 45035996273719486
table_schema             | public
table_name               | testid
is_system_table          | f
column_id                | 45035996273719486-1
column_name              | c1
data_type                | int
data_type_id             | 6
data_type_length         | 8
character_maximum_length |
numeric_precision        |
numeric_scale            |
datetime_precision       |
interval_precision       |
ordinal_position         | 1
is_nullable              | f
column_default           |
is_identity              | t
```

Use the SEQUENCES table to get detailed information about the sequence in testid:

```
=> SELECT * FROM sequences WHERE identity_table_name='testid';
-[ RECORD 1 ]-------+--------------------
sequence_schema     | public
sequence_name       | testid_c1_seq
owner_name          | dbadmin
identity_table_name | testid
session_cache_count | 1000
allow_cycle         | f
output_ordered      | f
increment_by        | 1
minimum             | 1
maximum             | 9223372036854775807
current_value       | 0
sequence_schema_id  | 45035996273704976
sequence_id         | 45035996273719488
owner_id            | 45035996273704962
identity_table_id   | 45035996273719486
```

For more information about sequences and identity columns, see Sequences .

COMMENTS

Returns information about comments associated with objects in the database.

Column Name	Data Type	Description
COMMENT_ID	INTEGER	Comment's internal ID number
OBJECT_ID	INTEGER	Internal ID number of the object associated with the comment.

OBJECT_TYPE	VARCHAR	Type of object associated with the comment, one of the following: • COLUMN • CONSTRAINT • FUNCTION • LIBRARY • NODE • PROJECTION • SCHEMA • SEQUENCE • TABLE • VIEW
OBJECT_SCHEMA	VARCHAR	Schema that contains the object.
OBJECT_NAME	VARCHAR	Name of the object associated with the comment.
OWNER_ID	VARCHAR	Internal ID of the object's owner.
OWNER_NAME	VARCHAR	Object owner's name.
CREATION_TIME	TIMESTAMPTZ	When the comment was created.
LAST_MODIFIED_TIME	TIMESTAMPTZ	When the comment was last modified.
COMMENT	VARCHAR	Comment text.

Caution
Queries on this table can be slow, as it obtains much of its data by querying other Vertica catalog tables.

COMPLEX_TYPES

Contains information about inlined complex types (Complex types).

Each complex type in each external table has a unique type internally, even if the types are structurally the same (like two different ROW(int,int) cases). This inlined type is created when the table using it is created and is automatically dropped when the table is dropped. Inlined complex types cannot be shared or reused in other tables.

Each row in the COMPLEX_TYPES table represents one component (field) in one complex type. A ROW produces one row per field, an ARRAY produces one, and a MAP produces two.

Arrays of primitive types used in native (ROS) tables are not included in the COMPLEX_TYPES table. They are included instead in the TYPES table.

Column Name	Data Type	Description
TYPE_ID	INTEGER	A unique identifier for the inlined complex type.
TYPE_KIND	VARCHAR	The specific kind of complex type: row, array, or map.
TYPE_NAME	VARCHAR	The generated name of this type. All names begin with _ct_ followed by a number.
FIELD_ID	INTEGER	A unique identifier for the field.
FIELD_NAME	VARCHAR	The name of the field, if specified in the table definition, or a generated name beginning with "f".

FIELD_TYPE_NAME	VARCHAR	The type of the field's value.
FIELD_POSITION	INTEGER	The field's position in its containing complex type (0-based).
FIELD_LENGTH	INTEGER	Number of bytes in the field value, or -1 if the value is not a scalar type.
CHARACTER_MAXIMUM_LENGTH	INTEGER	Maximum allowable length of the column.
NUMERIC_PRECISION	INTEGER	Number of significant decimal digits.
NUMERIC_SCALE	INTEGER	Number of fractional digits.
DATETIME_PRECISION	INTEGER	For TIMESTAMP data type, returns the declared precision; returns NULL if no precision was declared.
INTERVAL_PRECISION	INTEGER	Number of fractional digits retained in the seconds field.

Examples

The following example shows the type and field values after defining a single external table.

```
=> CREATE EXTERNAL TABLE warehouse(
   name VARCHAR, id_map MAP<INT,VARCHAR>,
   data row(record INT, total FLOAT, description VARCHAR(100)),
   prices ARRAY[INT], comment VARCHAR(200), sales_total FLOAT, storeID INT)
 AS COPY FROM ... PARQUET;

=> SELECT type_id,type_kind,type_name,field_id,field_name,field_type_name,field_position
   FROM COMPLEX_TYPES ORDER BY type_id,field_name;

     type_id      | type_kind |       type_name       | field_id | field_name  | field_type_name | field_position
------------------+-----------+-----------------------+----------+-------------+-----------------+----------------
 45035996274278280 | Map       | _ct_45035996274278280 |        6 | key         | int             |              0

```

CONSTRAINT_COLUMNS

Records information about table column constraints.

Column Name	Data Type	Description
CONSTRAINT_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog that identifies the constraint.
TABLE_SCHEMA	VARCHAR	Name of the schema that contains this table.
TABLE_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog that identifies the table.
TABLE_NAME	VARCHAR	Name of the table in which the column resides.
COLUMN_NAME	VARCHAR	Name of the column that is constrained. For check constraints, if more than one column is referenced, each appears as a separate row.
CONSTRAINT_NAME	VARCHAR	Constraint name for which information is listed.

CONSTRAINT_TYPE	CHAR	The constraint type, one of the following: • c : check • f : foreign • n : not null • p : primary • u : unique
IS_ENABLED	BOOLEAN	Indicates whether a constraint for a primary key, unique key, or check constraint is currently enabled.
REFERENCE_TABLE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thereferenced table
REFERENCE_TABLE_SCHEMA	VARCHAR	Schema name for which information is listed.
REFERENCE_TABLE_NAME	VARCHAR	References the TABLE_NAME column in the PRIMARY_KEY table.
REFERENCE_COLUMN_NAME	VARCHAR	References the COLUMN_NAME column in the PRIMARY_KEY table.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

CRYPTOGRAPHIC_KEYS

Stores private keys created by CREATE KEY .

Column Name	Data Type	Description
OID	INTEGER	The object identifier.
NAME	VARCHAR	Name of the key.
OWNER	INTEGER	The owner of the object.
TYPE	INTEGER	The type of key. • 0 = AES • 1 = RSA
LENGTH	INTEGER	The size of the key in bits.
HAS_PASSWORD	BOOLEAN	Whether the key has a password.
KEY	VARCHAR	The private key.

Examples

See Generating TLS certificates and keys .

DATABASES

Provides information about the databases in this Vertica installation.

Column Name	Data Type	Description
DATABASE_ID	INTEGER	The database's internal ID number
DATABASE_NAME	VARCHAR	The database's name

OWNER_ID	INTEGER	The database owner's ID
OWNER_NAME	INTEGER	The database owner's name
START_TIME	TIMESTAMPTZ	The date and time the database last started
COMPLIANCE_MESSAGE	VARCHAR	Message describing the current state of the database's license compliance
EXPORT_SUBNET	VARCHAR	Can be either of the following: • The subnet (on the public network) used by the database for import/export • The public address of the subnet that the Vertica native load balancing uses for load balancing
LOAD_BALANCE_POLICY	VARCHAR	The current native connection load balance policy, which controls whether client connection requests are redirected to other hosts in the database. See About native connection load balancing .
BACKEND_ADDRESS_FAMILY	VARCHAR	The Internet Protocol (IP) addressing standard used for internode communications. This value is either ipv4 or ipv6.
BRANCH_NAME	VARCHAR	This column is no longer used.

Examples

This example queries the databases table from a master database.

```
=> SELECT * FROM DATABASES;
-[ RECORD 1 ]----------+---------------------------------------------------------------
database_id            | 45035996273704976
database_name          | VMart
owner_id               | 45035996273704962
owner_name             | dbadmin
start_time             | 2017-10-22 05:16:22.066961-04
compliance_message     | The database is in compliance with respect to raw data size.
export_subnet          | 0
load_balance_policy    | none
backend_address_family | ipv4
branch_name            |
```

DIRECTED_QUERIES

Returns information about directed queries.

Column Name	Data Type	Description
QUERY_NAME	VARCHAR	This directed query's unique identifier, used by statements such as ACTIVATE DIRECTED QUERY .
IS_ACTIVE	BOOLEAN	Specifies whether the directed query is active.
VERTICA_VERSION	VARCHAR	The Vertica version used when this directed query was created.
COMMENT	VARCHAR	A user-supplied comment specified on creation of the directed query, or optimizer-generated, up to 128 characters.
CREATION_DATE	TIMESTAMPTZ	Specifies when the directed query was created.
INPUT_QUERY	VARCHAR	The input query that is associated with this directed query. Multiple directed queries can map to the same input query.

ANNOTATED_QUERY	VARCHAR	The directed query that was saved with CREATE DIRECTED QUERY .

Privileges

Superuser

Truncated query results

Query results for the fields INPUT_QUERY and ANNOTATED_QUERY are truncated after ~32K characters. You can get the full content of both fields in two ways:

- Use the statement GET DIRECTED QUERY .
- Use EXPORT_CATALOG to export directed queries.

DUAL

DUAL is a single-column "dummy" table with one record whose value is X; for example:

```
=> SELECT * FROM DUAL;
 dummy
-------
 X
(1 row)
```

You can write the following types of queries:

```
=> SELECT 1 FROM dual;
 ?column?
----------
        1
(1 row)
=> SELECT current_timestamp, current_user FROM dual;
          ?column?           | current_user
-------------------------------+--------------
 2010-03-08 12:57:32.065841-05 | release
(1 row)
=> CREATE TABLE t1(col1 VARCHAR(20), col2 VARCHAR(2));
=> INSERT INTO T1(SELECT 'hello' AS col1, 1 AS col2 FROM dual);)
=> SELECT * FROM t1;
 col1  | col2
-------+------
 hello | 1
(1 row
```

Restrictions

You cannot create projections for DUAL.

ELASTIC_CLUSTER

Returns information about cluster elasticity, such as whether Elastic cluster is running.

Column Name	Data Type	Description
SCALING_FACTOR	INTEGER	This value is only meaningful when you enable local segments. SCALING_FACTOR influences the number of local segments on each node. Initially—before a rebalance runs—there are *scaling_factor* number of local segments per node. A large SCALING_FACTOR is good for rebalancing a potentially wide range of cluster configurations quickly. However, too large a value might lead to ROS pushback , particularly in a database with a table with a large number of partitions. See SET_SCALING_FACTOR for more details.

MAXIMUM_SKEW_PERCENT	INTEGER	This value is only meaningful when you enable local segments. MAXIMUM_SKEW_PERCENT is the maximum amount of skew a rebalance operation tolerates, which preferentially redistributes local segments; however, if after doing so the segment ranges of any two nodes differs by more than this amount, rebalance will separate and distribute storage to even the distribution.
SEGMENT_LAYOUT	VARCHAR	Current, offset=0, segment layout. New segmented projections will be created with this layout, with segments rotated by the corresponding offset. Existing segmented projections will be rebalanced into an offset of this layout.
LOCAL_SEGMENT_LAYOUT	VARCHAR	Similar to SEGMENT_LAYOUT but includes details that indicate the number of local segments, their relative size and node assignment.
VERSION	INTEGER	Number that gets incremented each time the cluster topology changes (nodes added, marked ephemeral, marked permanent, etc). Useful for monitoring active and past rebalance operations.
IS_ENABLED	BOOLEAN	True if Elastic Cluster is enabled, otherwise false.
IS_LOCAL_SEGMENT_ENABLED	BOOLEAN	True if local segments are enabled, otherwise false.
IS_REBALANCE_RUNNING	BOOLEAN	True if rebalance is currently running, otherwise false.

Privileges

Superuser

- ENABLE_ELASTIC_CLUSTER
- Elastic cluster

EPOCHS

For the most recently closed epochs, lists the date and time of the close and the corresponding epoch number of the closed epoch. The EPOCHS table may return a varying number of rows depending on current commit activities.

Column Name	Data Type	Description
EPOCH_CLOSE_TIME	DATETIME	The date and time that the epoch closed.
EPOCH_NUMBER	INTEGER	The epoch number of the closed epoch.

Examples

```
=> SELECT * FROM EPOCHS;
     epoch_close_time       | epoch_number
-------------------------------+--------------
 2018-11-12 16:05:15.552571-05 |           16
(1 row)
```

Querying for historical data

If you need historical data about epochs and corresponding date information, query the DC_TRANSACTION_ENDS table.

```
=> select dc.end_epoch,min(dc.time),max(dc.time) from dc_transaction_ends dc group by end_epoch;
 end_epoch |              min              | max
-----------+-------------------------------+-------------------------------
       214 |  2018-10-12 08:05:47.02075-04 | 2018-10-15 10:22:24.015292-04
       215 | 2018-10-15 10:22:47.015172-04 | 2018-10-15 13:00:44.888984-04
                     ...
       226 | 2018-10-15 15:03:47.015235-04 | 2018-10-15 20:37:34.346667-04
       227 | 2018-10-15 20:37:47.008137-04 | 2018-10-16 07:39:00.29917-04
       228 | 2018-10-16 07:39:47.012411-04 | 2018-10-16 08:16:01.470232-04
       229 | 2018-10-16 08:16:47.018899-04 | 2018-10-16 08:21:13.854348-04
       230 | 2018-10-16 08:21:47.013767-04 | 2018-10-17 12:21:09.224094-04
       231 |  2018-10-17 12:21:09.23193-04 | 2018-10-17 15:11:59.338777-04
```

FAULT_GROUPS

View the fault groups and their hierarchy in the cluster.

Column Name	Data Type	Description
MEMBER_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog that identifies the fault group.
MEMBER_TYPE	VARCHAR	The type of fault group. Values can be either NODE or FAULT GROUP .
MEMBER_NAME	VARCHAR	Name associated with this fault group. Values will be the node name or the fault group name.
PARENT_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog that identifies the parent fault group. The parent fault group can contain: • Nodes • Other fault groups • Nodes and other fault groups
PARENT_TYPE	VARCHAR	The type of parent fault group, where the default/root parent is the DATABASE object. Can be one of the following objects: • FAULT GROUP • DATABASE
PARENT_NAME	VARCHAR	The name of the fault group that contains nodes or other fault groups or both nodes and fault groups.
IS_AUTOMATICALLY_GENERATED	BOOLEAN	If true, denotes whether Vertica Analytic Database created fault groups for you to manage the fault tolerance of control nodes in large cluster configurations. If false, denotes that you created fault groups manually. See Fault Groups for more information

Examples

Show the current hierarchy of fault groups in the cluster:

```
vmartdb=> SELECT member_type, member_name, parent_type, CASE
        WHEN parent_type = 'DATABASE' THEN ''
        ELSE parent_name END FROM fault_groups
        ORDER BY member_name;
 member_type | member_name          | parent_type | parent_name
-------------+----------------------+-------------+-------------
 NODE        | v_vmart_node0001     | FAULT GROUP | two
 NODE        | v_vmart_node0002     | FAULT GROUP | two
 NODE        | v_vmart_node0003     | FAULT GROUP | three
 FAULT GROUP | one                  | DATABASE    |
 FAULT GROUP | three                | DATABASE    |
 FAULT GROUP | two                  | FAULT GROUP | one
```

View the distribution of the segment layout:

```
vmartdb=> SELECT segment_layout from elastic_cluster;
                        segment_layout
-------------------------------------------------------------------------------
 v_vmart_node0001[33.3%] v_vmart_node0003[33.3%] v_vmart_node0004[33.3%]
(1 row)
```

FOREIGN_KEYS

Provides foreign key information.

Column Name	Data Type	Description
CONSTRAINT_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the constraint.
CONSTRAINT_NAME	VARCHAR	The constraint name for which information is listed.
COLUMN_NAME	VARCHAR	The name of the column that is constrained.
ORDINAL_POSITION	VARCHAR	The position of the column within the key. The numbering of columns starts at 1.
TABLE_NAME	VARCHAR	The table name for which information is listed.
REFERENCE_TABLE_NAME	VARCHAR	References the TABLE_NAME column in the PRIMARY_KEY table.
CONSTRAINT_TYPE	VARCHAR	The constraint type, f , for foreign key.
REFERENCE_COLUMN_NAME	VARCHAR	References the COLUMN_NAME column in the PRIMARY_KEY table.
TABLE_SCHEMA	VARCHAR	The schema name for which information is listed.
REFERENCE_TABLE_SCHEMA	VARCHAR	References the TABLE_SCHEMA column in the PRIMARY_KEY table.

Examples

```
mydb=> SELECT
        constraint_name,
        table_name,
        ordinal_position,
        reference_table_name
      FROM foreign_keys ORDER BY 3;
     constraint_name      |    table_name     | ordinal_position | reference_table_name
--------------------------+-------------------+------------------+----------------------

 fk_online_sales_warehouse | online_sales_fact |               9 | warehouse_dimension
 fk_online_sales_promotion | online_sales_fact |              10 | promotion_dimension
(26 rows)
```

GRANTS

Returns information about privileges that are explicitly granted on database objects. Information about inherited privileges is not included.

> **Note**
> While an ADMIN OPTION granted to users through roles is not viewable directly from this table, you can view it and a summary of privileges data with vsql meta-commands \z and \dp .

Column Name	Data Type	Description
GRANTEE	VARCHAR	The user being granted permission.
GRANTEE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theuser granted permissions.
GRANT_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thegrant operation.
GRANTOR	VARCHAR	The user granting the permission.
GRANTOR_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theuser who performed the grant operation.
OBJECT_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theobject granted.

OBJECT_NAME	VARCHAR	The name of the object that is being granted privileges. Note that for schema privileges, the schema name appears in the OBJECT_NAME column instead of the OBJECT_SCHEMA column.
OBJECT_SCHEMA	VARCHAR	The name of the schema that is being granted privileges.
OBJECT_TYPE	VARCHAR	The object type on which the grant was applied—for example, ROLE, SCHEMA, DATABASE, RESOURCEPOOL.
PRIVILEGES_DESCRIPTION	VARCHAR	Lists the privileges granted on an object—for example INSERT, SELECT. An asterisk in PRIVILEGES_DESCRIPTION output shows that the privilege grant included WITH GRANT OPTION .

Examples

The following query shows the privileges that are granted to user Rob or role R1. An asterisk (*) appended to a privilege indicates that the user can grant the privilege to other users:

```
=> SELECT grantor,privileges_description,object_name,object_type,grantee FROM grants WHERE grantee='Rob' OR grantee='R1';
 grantor |  privileges_description   | object_name | object_type  | grantee
--------+--------------------------+-------------+--------------+---------
dbadmin | USAGE                    | general     | RESOURCEPOOL | Rob
dbadmin | USAGE, CREATE            | s1          | SCHEMA       | Rob
dbadmin | INSERT*, SELECT*, UPDATE* | t1          | TABLE        | Rob
dbadmin | SELECT                   | t1          | TABLE        | R1
dbadmin | USAGE                    | s1          | SCHEMA       | R1
dbadmin |                          | R1          | ROLE         | Rob
(6 rows)
```

HCATALOG_COLUMNS

Describes the columns of all tables available through the HCatalog Connector. Each row in this table corresponds to to a column in a table accessible through the HCatalog Connector. See Using the HCatalog Connector for more information.

Column Name	Data Type	Description
TABLE_SCHEMA	VARCHAR(128)	The name of the Vertica Analytic Database schema that contains the table containing this column
HCATALOG_SCHEMA	VARCHAR(128)	The name of the Hive schema or database that contains the table containing this column
TABLE_NAME	VARCHAR(128)	The name of the table that contains the column
IS_PARTITION_COLUMN	BOOLEAN	Whether the table is partitioned on this column
COLUMN_NAME	VARCHAR(128)	The name of the column
HCATALOG_DATA_TYPE	VARCHAR(128)	The Hive data type of this column
DATA_TYPE	VARCHAR(128)	The Vertica Analytic Database data type of this column
DATA_TYPE_ID	INTEGER	Numeric ID of the column's Vertica Analytic Database data type
DATA_TYPE_LENGTH	INTEGER	The number of bytes used to store this data type
CHARACTER_MAXIMUM_LENGTH	INTEGER	For string data types, the maximum number of characters it can hold

NUMERIC_PRECISION	INTEGER	For numeric types, the precision of the values in the column
NUMERIC_SCALE	INTEGER	For numeric data types, the scale of the values in the column
DATETIME_PRECISION	INTEGER	For datetime data types, the precision of the values in the column
INTERVAL_PRECISION	INTEGER	For interval data types, the precision of the values in the column
ORDINAL_POSITION	INTEGER	The position of the column within the table

Privileges

No explicit permissions are required; however, users see only the records that correspond to schemas they have permissions to access.

Notes

If you are using WebHCat instead of HiveServer2, querying this table results in one web service call to the WebHCat server for each table in each HCatalog schema. If you need to perform multiple queries on this table in a short period of time, consider creating a copy of the table using a CREATE TABLE AS statement to improve performance. The copy does not reflect any changes made to the schema of the Hive tables after it was created, but it is much faster to query.

Examples

The following example demonstrates finding the column information for a specific table:

```
=> SELECT * FROM HCATALOG_COLUMNS WHERE table_name = 'hcatalogtypes'
-> ORDER BY ordinal_position;
-[ RECORD 1 ]------------+-----------------
table_schema             | hcat
hcatalog_schema          | default
table_name               | hcatalogtypes
is_partition_column      | f
column_name              | intcol
hcatalog_data_type       | int
data_type                | int
data_type_id             | 6
data_type_length         | 8
character_maximum_length |
numeric_precision        |
numeric_scale            |
datetime_precision       |
interval_precision       |
ordinal_position         | 1
-[ RECORD 2 ]------------+-----------------
table_schema             | hcat
hcatalog_schema          | default
table_name               | hcatalogtypes
is_partition_column      | f
column_name              | floatcol
hcatalog_data_type       | float
data_type                | float
data_type_id             | 7
data_type_length         | 8
character_maximum_length |
numeric_precision        |
numeric_scale            |
datetime_precision       |
interval_precision       |
ordinal_position         | 2

HCATALOG_SCHEMATA

Lists all of the schemas defined using the HCatalog Connector. See Using the HCatalog Connector .

Unlike other HCatalog Connector-related system tables, this table makes no calls to Hive, so querying incurs very little overhead.

Column Name	Data Type	Description

SCHEMA_ID	INTEGER	The Vertica Analytic Database ID number for the schema
SCHEMA_NAME	VARCHAR(128)	The name of the schema defined in the Vertica Analytic Database catalog
SCHEMA_OWNER_ID	INTEGER	The ID number of the user who owns the Vertica Analytic Database schema
SCHEMA_OWNER	VARCHAR(128)	The username of the Vertica Analytic Database schema's owner
CREATE_TIME	TIMESTAMPTZ	The date and time the schema as created
HOSTNAME	VARCHAR(128)	The host name or IP address of the database server that holds the Hive metadata
PORT	INTEGER	The port number on which the metastore database listens for connections
HIVESERVER2_HOSTNAME	VARCHAR(128)	The host name or IP address of the HiveServer2 server for the Hive database
WEBSERVICE_HOSTNAME	VARCHAR(128)	The host name or IP address of the WebHCat server for the Hive database, if used
WEBSERVICE_PORT	INTEGER	The port number on which the WebHCat server listens for connections
WEBHDFS_ADDRESS	VARCHAR (128)	The host and port ("host:port") for the WebHDFS service, used for reading ORC and Parquet files
HCATALOG_SCHEMA_NAME	VARCHAR(128)	The name of the schema or database in Hive to which the Vertica Analytic Database schema is mapped/
HCATALOG_USER_NAME	VARCHAR(128)	The username the HCatalog Connector uses to authenticate itself to the Hive database.
HCATALOG_CONNECTION_TIMEOUT	INTEGER	The number of seconds the HCatalog Connector waits for a successful connection to the HiveServer or WebHCat server. A value of 0 means wait indefinitely.
HCATALOG_SLOW_TRANSFER_LIMIT	INTEGER	The lowest data transfer rate (in bytes per second) from the HiveServer2 or WebHCat server that the HCatalog Connector accepts.
HCATALOG_SLOW_TRANSFER_TIME	INTEGER	The number of seconds the HCatalog Connector waits before enforcing the data transfer rate lower limit by breaking the connection and terminating the query.
SSL_CONFIG	VARCHAR(128)	The path of the Hadoop ssl-client.xml configuration file, if using HiveServer2 with SSL wire encryption.
CUSTOM_PARTITIONS	BOOLEAN	Whether the Hive schema uses custom partition locations.

Privileges

No explicit permissions are required; however, users see only the records that correspond to schemas they have permissions to access.

See also

- HCATALOG_COLUMNS
- HCATALOG_TABLE_LIST
- HCATALOG_TABLES

HCATALOG_TABLE_LIST

A concise list of all tables contained in all Hive schemas and databases available through the HCatalog Connector. See Using the HCatalog Connector .

Column Name	Data Type	Description
TABLE_SCHEMA_ID	INTEGER	Internal ID number for the schema containing the table

TABLE_SCHEMA	VARCHAR(128)	Name of the Vertica Analytic Database schema through which the table is available
HCATALOG_SCHEMA	VARCHAR(128)	Name of the Hive schema or database containing the table
TABLE_NAME	VARCHAR(128)	The name of the table
HCATALOG_USER_NAME	VARCHAR(128)	Name of Hive user used to access the table

Privileges

No explicit permissions are required; however, users see only the records that correspond to schemas they have permissions to access.

Notes

- Querying this table results in one call to HiveServer2 for each Hive schema defined using the HCatalog Connector. This means that the query usually takes longer than querying other system tables.
- Querying this table is faster than querying HCATALOG_TABLES. Querying HCATALOG_TABLE_LIST only makes one HiveServer2 call per HCatalog schema versus one call per table for HCATALOG_TABLES.

Examples

The following example demonstrates defining a new HCatalog schema then querying HCATALOG_TABLE_LIST. Note that one table defined in a different HCatalog schema also appears. HCATALOG_TABLE_LIST lists all of the tables available in any of the HCatalog schemas:

```
=> CREATE HCATALOG SCHEMA hcat WITH hostname='hcathost'
-> HCATALOG_SCHEMA='default' HCATALOG_DB='default' HCATALOG_USER='hcatuser';
CREATE SCHEMA
=> \x
Expanded display is on.
=> SELECT * FROM v_catalog.hcatalog_table_list;
-[ RECORD 1 ]------+------------------
table_schema_id    | 45035996273748980
table_schema       | hcat
hcatalog_schema    | default
table_name         | weblogs
hcatalog_user_name | hcatuser
-[ RECORD 2 ]------+------------------
table_schema_id    | 45035996273748980
table_schema       | hcat
hcatalog_schema    | default
table_name         | tweets
hcatalog_user_name | hcatuser
-[ RECORD 3 ]------+------------------
table_schema_id    | 45035996273748980
table_schema       | hcat
hcatalog_schema    | default
table_name         | messages
hcatalog_user_name | hcatuser
-[ RECORD 4 ]------+------------------
table_schema_id    | 45035996273864948
table_schema       | hiveschema
hcatalog_schema    | default
table_name         | weblogs
hcatalog_user_name | hcatuser
```

HCATALOG_TABLES

Returns a detailed list of all tables made available through the HCatalog Connector. See Using the HCatalog Connector .

Column Name	Data Type	Description
TABLE_SCHEMA_ID	INTEGER	ID number of the schema
TABLE_SCHEMA	VARCHAR(128)	The name of the Vertica Analytic Database schema through which the table is available
HCATALOG_SCHEMA	VARCHAR(128)	The name of the Hive schema or database that contains the table
TABLE_NAME	VARCHAR(128)	The name of the table
HCATALOG_USER_NAME	VARCHAR(128)	The name of the HCatalog user whose credentials are used to access the table's data
MIN_FILE_SIZE_BYTES	INTEGER	The file size of the table's smallest data file, if using WebHCat; null if using HiveServer2
TOTAL_NUMBER_FILES	INTEGER	The number of files used to store this table's data in HDFS
LOCATION	VARCHAR(8192)	The URI for the directory containing this table's data, normally an HDFS URI
LAST_UPDATE_TIME	TIMESTAMPTZ	The last time data in this table was updated, if using WebHCat; null if using HiveServer2
OUTPUT_FORMAT	VARCHAR(128)	The Hive SerDe class used to output data from this table
LAST_ACCESS_TIME	TIMESTAMPTZ	The last time data in this table was accessed, if using WebHCat; null if using HiveServer2
MAX_FILE_SIZE_BYTES	INTEGER	The size of the largest data file for this table, if using WebHCat; null if using HiveServer2
IS_PARTITIONED	BOOLEAN	Whether this table is partitioned
PARTITION_EXPRESSION	VARCHAR(128)	The expression used to partition this table
TABLE_OWNER	VARCHAR(128)	The Hive user that owns this table in the Hive database, if using WebHCat; null if using HiveServer2
INPUT_FORMAT	VARCHAR(128)	The SerDe class used to read the data from this table
TOTAL_FILE_SIZE_BYTES	INTEGER	Total number of bytes used by all of this table's data files
HCATALOG_GROUP	VARCHAR(128)	The permission group assigned to this table, if using WebHCat; null if using HiveServer2
PERMISSION	VARCHAR(128)	The Unix file permissions for this group, as shown by the ls -l command, if using WebHCat; null if using HiveServer2

Privileges

No explicit permissions are required; however, users see only the records that correspond to schemas they have permissions to access.

INHERITED_PRIVILEGES

Provides summary information about privileges inherited by tables and views from GRANT statements on parent schemas, excluding inherited grant options .

For information about explicitly granted permissions, see system table GRANTS .

> **Note**
> Inherited privileges are not displayed if privilege inheritance is disabled at the database level.

Column Name	Data Type	Description
OBJECT_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theobject inheriting the privileges.
SCHEMA_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theparent schema.
OBJECT_SCHEMA	VARCHAR	Name of the parent schema of a table or view.
OBJECT_NAME	VARCHAR	Name of the table or view.
OBJECT_TYPE	VARCHAR	Table or view.
PRIVILEGES_DESCRIPTION	VARCHAR	Lists the privileges inherited on an object. An asterisk (*) appended to a privilege indicates that the user can grant the privilege to other users by granting the privilege on the parent schema.
PRINCIPAL	VARCHAR	Name of the role or user inheriting the privileges in the row.
PRINCIPAL_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theuser inheriting the privileges.
GRANTOR	VARCHAR	User that granted the privileges on the parent schema to the principal.
GRANTOR_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theuser who performed the grant operation.
GRANT_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thegrant operation.

Examples

The following query returns the privileges that the tables and views inherit from their parent schema, customers.

```
=> SELECT object_schema,object_name,object_type,privileges_description,principal,grantor FROM inherited_privileges WHERE
object_schema='customers';
 object_schema |  object_name  | object_type |                    privileges_description                    | principal | grantor
---------------+---------------+-------------+--------------------------------------------------------------+-----------+---------
 customers     | cust_info     | Table       | INSERT, SELECT, UPDATE, DELETE, ALTER, REFERENCES, DROP, TRUNCATE        | dbadmin   | dbadmin
 customers     | shipping_info | Table       | INSERT, SELECT, UPDATE, DELETE, ALTER, REFERENCES, DROP, TRUNCATE        | dbadmin   | dbadmin
 customers     | cust_set      | View        | SELECT, ALTER, DROP                                          | dbadmin   | dbadmin
 customers     | cust_info     | Table       | SELECT                                                       | Val       | dbadmin
 customers     | shipping_info | Table       | SELECT                                                       | Val       | dbadmin
 customers     | cust_set      | View        | SELECT                                                       | Val       | dbadmin
 customers     | cust_info     | Table       | INSERT                                                       | Pooja     | dbadmin
 customers     | shipping_info | Table       | INSERT                                                       | Pooja     | dbadmin
(8 rows)
```

INHERITING_OBJECTS

Provides information about which tables and views inherit privileges from which schemas.

For information about the specific privileges inherited from schemas and their associated GRANT statements, see the INHERITED_PRIVILEGES table.

Column Name	Data Type	Description
OBJECT_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theobject inheriting the privileges.

SCHEMA_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theparent schema.
OBJECT_SCHEMA	VARCHAR	Name of the parent schema of a table or view.
OBJECT_NAME	VARCHAR	Name of the table or view.
OBJECT_TYPE	VARCHAR	Table or view.

Examples

The following query returns the tables and views that inherit their privileges from their parent schema, customers.

```
=> SELECT * FROM inheriting_objects WHERE object_schema='customers';
    object_id     |     schema_id     | object_schema |  object_name  | object_type
------------------+-------------------+---------------+---------------+-------------
45035996273980908 | 45035996273980902 | customers     | cust_info     | table
45035996273980984 | 45035996273980902 | customers     | shipping_info | table
45035996273980980 | 45035996273980902 | customers     | cust_set      | view
(3 rows)
```

KEYWORDS

Identifies Vertica reserved and non-reserved keywords.

Column Name	Data Type	Description
KEYWORD	VARCHAR	Vertica-reserved or non-reserved keyword.
RESERVED	VARCHAR	Indicates whether a keyword is reserved or non-reserved: • R: reserved • N: non-reserved

Examples

The following query gets all reserved keywords that begin with B:

```
=> SELECT * FROM keywords WHERE reserved = 'R' AND keyword ilike 'B%';
 keyword | reserved
---------+----------
 BETWEEN | R
 BIGINT  | R
 BINARY  | R
 BIT     | R
 BOOLEAN | R
 BOTH    | R
(6 rows)
```

See also

Keywords

LARGE_CLUSTER_CONFIGURATION_STATUS

Shows the current cluster nodes and control node (spread hosts) designations in the Catalog so you can see if they match.

Column Name	Data Type	Description

NODE_NAME	VARCHAR	The name of the node in the cluster.
SPREAD_HOST_NAME	VARCHAR	The host name of the control node (the host that manages control message responsibilities)
CONTROL_NODE_NAME	VARCHAR	The name of the control node

See also

Large Cluster

LICENSE_AUDITS

Lists the results of Vertica's license automatic compliance audits. See How Vertica Calculates Database Size .

Column Name	Data Type	Description
DATABASE_SIZE_BYTES	INTEGER	The estimated raw data size of the database
LICENSE_SIZE_BYTES	INTEGER	The licensed data allowance
USAGE_PERCENT	FLOAT	Percentage of the licensed allowance used
AUDIT_START_TIMESTAMP	TIMESTAMPTZ	When the audit started
AUDIT_END_TIMESTAMP	TIMESTAMPTZ	When the audit finished
CONFIDENCE_LEVEL_PERCENT	FLOAT	The confidence level of the size estimate
ERROR_TOLERANCE_PERCENT	FLOAT	The error tolerance used for the size estimate
USED_SAMPLING	BOOLEAN	Whether data was randomly sampled (if false, all of the data was analyzed)
CONFIDENCE_INTERVAL_LOWER_BOUND_BYTES	INTEGER	The lower bound of the data size estimate within the confidence level
CONFIDENCE_INTERVAL_UPPER_BOUND_BYTES	INTEGER	The upper bound of the data size estimate within the confidence level
SAMPLE_COUNT	INTEGER	The number of data samples used to generate the estimate
CELL_COUNT	INTEGER	The number of cells in the database
AUDITED_DATA	VARCHAR	The type of data audited, which includes regular (non-flex), flex, external, and total data

LICENSES

For all licenses, provides information on license types, the dates for which licenses are valid, and the limits the licenses impose.

Column Name	Data Type	Description
LICENSE_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the license.
NAME	VARCHAR	The license's name. (The license name in this column could be represented by a long license key.)
LICENSEE	VARCHAR	The entity to which the product is licensed.
START_DATE	VARCHAR	The start date for which the license is valid.

END_DATE	VARCHAR	The end date until which the license is valid (or "Perpetual" if the license has no expiration).
LICENSETYPE	VARCHAR	The type of the license (for example, Premium Edition).
PARENT	VARCHAR	The parent license (field is blank if there is no parent).
SIZE	VARCHAR	The size limit for data on the license.
IS_SIZE_LIMIT_ENFORCED	BOOLEAN	Indicates whether the license includes enforcement of data and node limits, where t is true and f is false.
NODE_RESTRICTION	VARCHAR	The node limit the license imposes.
CONFIGURED_ID	INTEGER	A long license key.

LOAD_BALANCE_GROUPS

Lists the objects contained by all load balance groups. Each row in this table represents a single object that is a member of a load balance group. If a load balance group does not contain any objects, it appears once in this table with its type column set to 'Empty Group.'

Column Name	Data Type	Description
NAME	VARCHAR	The name of the load balance group
POLICY	VARCHAR	The policy that sets how the group chooses the node for a connection. Contains one of the following: • ROUNDROBIN • RANDOM • NONE
FILTER	VARCHAR	The IP address range in CIDR format to select the members of a fault group that are included in the load balance group. This column only has a value if the TYPE column is 'Fault Group' or 'Subcluster.'
TYPE	VARCHAR	The type of object contained in the load balance group. Contains one of: • Fault Group • Subcluster • Network Address Group • Empty Group
OBJECT_NAME	VARCHAR	The name of the fault group or network address included in the load balance group. This column is NULL if the group contains no objects.

Examples

```
=> SELECT * FROM LOAD_BALANCE_GROUPS;
    name      |   policy   |  filter   |         type          | object_name
--------------+------------+-----------+-----------------------+-------------
 group_1      | ROUNDROBIN |           | Network Address Group | node01
 group_1      | ROUNDROBIN |           | Network Address Group | node02
 group_2      | ROUNDROBIN |           | Empty Group           |
 group_all    | ROUNDROBIN |           | Network Address Group | node01
 group_all    | ROUNDROBIN |           | Network Address Group | node02
 group_all    | ROUNDROBIN |           | Network Address Group | node03
 group_fault_1 | RANDOM     | 0.0.0.0/0 | Fault Group           | fault_1
(7 rows)
```

- ALTER NETWORK ADDRESS
- ALTER ROUTING RULE
- CREATE LOAD BALANCE GROUP

LOG_PARAMS

Provides summary information about changes to configuration parameters related to authentication and security run in your database.

Column Name	Data Type	Description
ISSUED_TIME	VARCHAR	The time at which the query was executed.
USER_NAME	VARCHAR	Name of the user who issued the query at the time Vertica recorded the session.
USER_ID	INTEGER	Numeric representation of the user who ran the query.
HOSTNAME	VARCHAR	The hostname, IP address, or URL of the database server.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
AUDIT_TYPE	VARCHAR	The type of operation for the audit, in this case, Parameter.
AUDIT_TAG_NAME	VARCHAR	The tag for the specific parameter.
REQUEST_TYPE	VARCHAR	The type of query request.
REQUEST_ID	INTEGER	Unique identifier of the query request in the user session.
SUBJECT	VARCHAR	The new value of the parameter.
REQUEST	VARCHAR	Lists the query request.
SUCCESS	VARCHAR	Indicates whether or not the operation was successful.
CATEGORY	VARCHAR	The audit parent category, such as Authentication.

Examples

The following example queries the LOG_PARAMS system table and shows only the most recent configuration parameter for this user under the Authentication category:

```
=> SELECT * FROM log_params limit 1;

-[ RECORD 1 ]-----------------------------------------------------------------------------------------------

issued_time   | 2018-02-12 13:41:20.837452-05
user_name     | dbadmin
user_id       | 45035996273704962
hostname      | ::1:50690
session_id    | v_vmart_node0001-341751:0x13878
audit_type    | Param
audit_tag_name| SecurityAlgorithm
request_type  | UTILITY
request_id    | 8
subject       | MD5
request       | select set_config_parameter('SecurityAlgorithm','MD5',null);
success       | t
category      | Authentication
(1 row)
```

LOG_QUERIES

Provides summary information about some queries related to authentication and security run in your database.

Column Name	Data Type	Description
ISSUED_TIME	VARCHAR	The time at which the query was executed.
USER_NAME	VARCHAR	Name of the user who issued the query at the time Vertica recorded the session.
USER_ID	INTEGER	Numeric representation of the user who ran the query.
HOSTNAME	VARCHAR	The hostname, IP address, or URL of the database server.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
AUDIT_TYPE	VARCHAR	The type of operation for the audit, in this case, Query.
AUDIT_TAG_NAME	VARCHAR	The tag for the specific query.
REQUEST_TYPE	VARCHAR	The type of query request. Examples include, but are not limited to: • QUERY • DDL • LOAD • UTILITY • TRANSACTION • PREPARE • EXECUTE • SET • SHOW
REQUEST_ID	INTEGER	The ID of the query request.
SUBJECT	VARCHAR	The subject of the query.
REQUEST	VARCHAR	Lists the query request.
SUCCESS	VARCHAR	Indicates whether or not the operation was successful.

CATEGORY	VARCHAR	The audit parent category, such as Managing_Users_Privileges.

Examples

The following example queries the LOG_QUERIES system table and shows only the most recent query for this user under the Managing_Users_Privileges category:

```
=> SELECT * FROM log_queries limit 1;
-------------------------------------------------------------------------------

issued_time   | 2018-01-22 10:36:55.634349-05
user_name     | dbadmin
user_id       | 45035996273704962
hostname      |
session_id    | v_vmart_node0001-237210:0x37e1d
audit_type    | Query
audit_tag_name| REVOKE ROLE
request_type  | DDL
request_id    | 2
subject       |
request       | revoke all privileges from Joe;
success       | f
category      | Managing_Users_Privileges
(1 row)
```

LOG_TABLES

Provides summary information about queries on system tables.

Column Name	Data Type	Description
ISSUED_TIME	VARCHAR	Time of query execution.
USER_NAME	VARCHAR	Name of user who issued the query at the time Vertica recorded the session.
USER_ID	INTEGER	Numeric representation of the user who ran the query.
HOSTNAME	VARCHAR	The hostname, IP address, or URL of the database server.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
AUDIT_TYPE	VARCHAR	The type of operation for the audit, in this case, Table.
AUDIT_TAG_NAME	VARCHAR	The tag for the specific table.
REQUEST_TYPE	VARCHAR	The type of query request. In this case, QUERY.
REQUEST_ID	INTEGER	Unique identifier of the query request in the user session.
SUBJECT	VARCHAR	The name of the table that was queried.
REQUEST	VARCHAR	Lists the query request.
SUCCESS	VARCHAR	Indicates whether or not the operation was successful.
CATEGORY	VARCHAR	The audit parent category—for example, Views , Security , and Managing_Users_Privileges .

Examples

The following example shows recent queries on configuration parameters:

```
dbadmin=> SELECT issued_time, audit_type, request_type, subject, request, category FROM log_tables
   WHERE category ilike '%Managing_Config_Parameters%' ORDER BY issued_time DESC LIMIT 4;
-[ RECORD 1 ]+-----------------------------------------------------------------------------------
issued_time  | 2020-05-14 14:14:53.453552-04
audit_type   | Table
request_type | QUERY
subject      | vs_nodes

MATERIALIZE_FLEXTABLE_COLUMNS_RESULTS

Contains the results of running the MATERIALIZE_FLEXTABLE_COLUMNS function. The table contains information about keys that the function evaluated. It does not contain information about all keys.

Column Name	Data Type	Description
TABLE_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the table.
TABLE_SCHEMA	VARCHAR	The schema name for which information is listed.
TABLE_NAME	VARCHAR	The table name for which information is listed.
CREATION_TIME	VARCHAR	Timestamp when the key was materialized.
KEY_NAME	VARCHAR	Name of the key from the VMap column that was materialized.
STATUS	VARCHAR	Status of the materialized column, one of the following: • ADDED • EXISTS • ERROR

MESSAGE	BOOLEAN	Message associated with the status in the previous column, one of the following: • Added successfully • Column of same name already exists in table definition • Add operation failed • No data type guess provided to add column

Examples

```
=> \x
Expanded display is on.
=> SELECT table_id, table_schema, table_name, key_name, status, message FROM MATERIALIZE_FLEXTABLE_COLUMNS_RESULTS
WHERE table_name = 'mountains_hybrid';
-[ RECORD 1 ]+-------------------------------------------------
table_id     | 45035996273708192
table_schema | public
table_name   | mountains_hybrid
key_name     | type
status       | ADDED
message      | Added successfully
-[ RECORD 2 ]+-------------------------------------------------
table_id     | 45035996273708192
table_schema | public
table_name   | mountains_hybrid
key_name     | height
status       | ADDED
message      | Added successfully
-[ RECORD 3 ]+-------------------------------------------------
table_id     | 45035996273708192
table_schema | public
table_name   | mountains_hybrid
key_name     | name
status       | EXISTS
message      | Column of same name already exists in table definition
```

MODELS

Lists details about the machine-learning models in the database.

Column Name	Data Type	Description
MODEL_ID	INTEGER	The model's internal ID.
MODEL_NAME	VARCHAR(128)	The name of the model.
SCHEMA_ID	INTEGER	The schema's internal ID.
SCHEMA_NAME	VARCHAR(128)	The name of the schema.
OWNER_ID	INTEGER	The model owner's ID.
OWNER_NAME	VARCHAR(128)	The user who created the model.
CATEGORY	VARCHAR(128)	The type of model. By default, models created in Vertica are assigned to the Vertica_Models category.
MODEL_TYPE	VARCHAR(128)	The type of algorithm used to create the model.
IS_COMPLETE	VARCHAR(128)	Denotes whether the model is complete and ready for use in machine learning functions. This field is usually false when the model is being trained. Once the training is complete, the field is set to true.

CREATE_TIME	TIMESTAMPTZ	The time the model was created.
SIZE	INTEGER	The size of the model in bytes.

Examples

```
=> SELECT * FROM models;
-[ RECORD 1 ]----------------------------
model_id    | 45035996273714020
model_name  | myLinearRegModel
schema_id   | 45035996273704980
schema_name | public
owner_id    | 45035996273704962
owner_name  | dbadmin
category    | VERTICA_MODELS
model_type  | LINEAR_REGRESSION
is_complete | t
create_time | 2018-01-22 11:13:35.018412-05
size        | 1671
```

NETWORK_ADDRESSES

Lists information about the network addresses defined in your database using the CREATE NETWORK ADDRESS statement.

Column Name	Data Type	Description
NAME	VARCHAR	The name of the network address.
NODE	VARCHAR	The name of the node that owns the network address.
ADDRESS	VARCHAR	The network address's IP address. This address can be either in IPv4 or IPv6 format.
PORT	INT	The network address's port number.
ADDRESS_FAMILY	VARCHAR	The format of the network address's IP address. This values is either 'ipv4' or 'ipv6'.
IS_ENABLED	BOOLEAN	Whether the network address is enabled. You can disable network addresses to prevent their use. If the address is disabled, the value in this column is False.
IS_AUTO_DETECTED	BOOLEAN	Whether Vertica created the network address automatically.

Examples

```
=> \x
Expanded display is on.

=> SELECT * FROM v_catalog.network_addresses;
-[ RECORD 1 ]----+-----------------
name             | node01
node             | v_vmart_node0001
address          | 10.20.100.247
port             | 5433
address_family   | ipv4
is_enabled       | t
is_auto_detected | f
-[ RECORD 2 ]----+-----------------
name             | node02
node             | v_vmart_node0002
address          | 10.20.100.248
port             | 5433
address_family   | ipv4
is_enabled       | t
is_auto_detected | f
-[ RECORD 3 ]----+-----------------
name             | node03
node             | v_vmart_node0003
address          | 10.20.100.249
port             | 5433
address_family   | ipv4
is_enabled       | t
is_auto_detected | f
```

NODE_SUBSCRIPTION_CHANGE_PHASES

In an Eon Mode database, stores information about changes to node's shard subscriptions.

Column Name	Data Type	Description
node_name	VARCHAR	Name of the node
subscription_change_type	VARCHAR	The change being made to the subscription
session_id	INTEGER	ID of the session in which the change was initiated
transaction_id	INTEGER	ID of the transaction in which the change was initiated
user_id	INTEGER	ID of user that initiated the change
user_name	VARCHAR	Name of user that initiated the change
subscription_oid	INTEGER	Session object ID
subscriber_node_oid	INTEGER	Object ID of node that requested the subscription
subscriber_node_name	VARCHAR	Name of the node that requested the subscription

shard_oid	INTEGER	Object ID of the shard to which the node is subscribed
shard_name	VARCHAR	Name of the shard to which the node is subscribed
min_time	TIMESTAMPTZ	Start time of the subscription change
max_time	TIMESTAMPTZ	Completion time of the subscription change
source_node_oid	INTEGER	Object ID of the node from which catalog objects were fetched
source_node_name	VARCHAR	Name of the node from which catalog objects were fetched
num_objs_affected	INTEGER	Number of catalog objects affected by the subscription change
action	VARCHAR	Description of the action taken
new_content_size	INTEGER	Total size of the catalog objects that were fetched for the subscription change
phase_limit_reached	BOOLEAN	Reached maximum number of retries?
START_TIME	TIMESTAMPTZ	When the subscription change started
END_TIME	TIMESTAMPTZ	When the subscription change was finished
retried	BOOLEAN	Retry of subscription phase?
phase_result	VARCHAR	Outcome of the subscription change, one of the following: • Success • Failure

Examples

```
=> SELECT NODE_NAME, SUBSCRIPTION_CHANGE_TYPE, SHARD_NAME,
   ACTION  FROM node_subscription_change_phases
   ORDER BY start_time ASC LIMIT 10;

     NODE_NAME       | SUBSCRIPTION_CHANGE_TYPE | SHARD_NAME  |         ACTION
---------------------+--------------------------+-------------+------------------------
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0007 | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0010 | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0004 | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0005 | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | replica     | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0005 | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0006 | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0008 | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0011 | COLLECT SHARD METADATA
 v_verticadb_node0001 | CREATE SUBSCRIPTION      | segment0002 | COLLECT SHARD METADATA
```

NODE_SUBSCRIPTIONS

Eon Mode only

Lists information about database node subscriptions to shards.

Column Name	**Data Type**	**Description**
SUBSCRIPTION_OID	INTEGER	Subscription OID

NODE_OID	INTEGER	Subscribed node OID
NODE_NAME	VARCHAR	Name of the node
SHARD_OID	INTEGER	OID of the shard to which the node is subscribed
SHARD_NAME	VARCHAR	Name of the shard to which the node is subscribed
SUBSCRIPTION_STATE	VARCHAR	Node's current subscription state
FROM _VERSION	INTEGER	Deprecated
IS_PRIMARY	BOOLEAN	Specifies whether the node is currently the primary subscriber .
IS_RESUBSCRIBING	BOOLEAN	Indicates whether a subscription is resubscribing to a node: • t (true): A subscription is resubscribing, only applies to PENDING subscriptions created during the cluster or node startup. • f (false): A subscription is not resubscribing, applies to PENDING subscriptions created with REBALANCE_SHARDS that transitioned to an ACTIVE state.
CREATOR_TID	INTEGER	ID of transaction that created this subscription
SUBSCRIBED_TO_METADATA_AT	INTEGER	Deprecated
IS_PARTICIPATING_PRIMARY	BOOLEAN	Whether this node is the participating primary subscriber for the shard. If true, the node listed in NODE_NAME is the only one that reads from and writes to communal storage for this shard in the subcluster. Other nodes in the subcluster that subscribe to the same shard receive data from this node via peer-to-peer transfers.

Examples

The following example queries the NODE_SUBSCRIPTIONS table in a database with two three-node subclusters (a primary and a secondary) in a 12-shard database.

```
=> SELECT node_name, shard_name, subscription_state, is_primary,
          is_participating_primary AS is_p_primary
       FROM NODE_SUBSCRIPTIONS ORDER BY node_name, shard_name;

      node_name       | shard_name  | subscription_state | is_primary | is_p_primary
----------------------+-------------+--------------------+------------+--------------
 v_verticadb_node0001 | replica     | ACTIVE             | t          | t
 v_verticadb_node0001 | segment0001 | ACTIVE             | t          | t
 v_verticadb_node0001 | segment0003 | ACTIVE             | f          | f
 v_verticadb_node0001 | segment0004 | ACTIVE             | t          | t
 v_verticadb_node0001 | segment0006 | ACTIVE             | f          | f
 v_verticadb_node0001 | segment0007 | ACTIVE             | t          | t

```

NODES

Lists details about the nodes in the database.

Column Name	Data Type	Description
NODE_NAME	VARCHAR(128)	The name of the node.
NODE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies the node.
NODE_STATE	VARCHAR(128)	The node's current state, one of the following: • UP • DOWN • READY • UNSAFE • SHUTDOWN • SHUTDOWN_ERROR • RECOVERING • RECOVER_ERROR • RECOVERED • INITIALIZING • STANDBY • NEEDS_CATCHUP
IS_PRIMARY	BOOLEAN	Whether the node is a primary or secondary node. Primary nodes are the only ones Vertica considers when determining the K-Safety of an Eon Mode database. The node inherits this property from the subcluster that contains it.
IS_READONLY	BOOLEAN	Whether the node is in read-only mode or not. This column is TRUE if the Eon Mode database is read-only due to the loss of quorum or primary shard coverage . See Database Read-Only Mode .
NODE_ADDRESS	VARCHAR(80)	The host address of the node.
NODE_ADDRESS_FAMILY	VARCHAR(10)	The IP Version of the node_address . For example, ipv4 .
EXPORT_ADDRESS	VARCHAR(8192)	The IP address of the node (on the public network) used for import/export operations and native load-balancing.
EXPORT_ADDRESS_FAMILY	VARCHAR(10)	The IP Version of the export_address . For example, ipv4 .
CATALOG_PATH	VARCHAR(8192)	The absolute path to the catalog on the node.
NODE_TYPE	VARCHAR(9)	The type of the node. For more information on the types of nodes, refer to Setting node type .
IS_EPHEMERAL	BOOLEAN	(Deprecated) True if this node has been marked as ephemeral. (in preparation for removing it from the cluster).
STANDING_IN_FOR	VARCHAR(128)	The name of the node that this node is currently replacing.
SUBCLUSTER_NAME	VARCHAR(128)	In an Eon Mode database, the name of the subcluster that contains the node. Nodes belong to exactly one subcluster.
LAST_MSG_FROM_NODE_AT	TIMESTAMPTZ	The date and time the last message was received from this node.
NODE_DOWN_SINCE	TIMESTAMPTZ	The amount of time that the replaced node has been unavailable.
BUILD_INFO	VARCHAR(128)	The version of the Vertica server binary the node is running.

Example

```
=> SELECT NODE_NAME, NODE_STATE, IS_PRIMARY, IS_READONLY, NODE_TYPE,
       SUBCLUSTER_NAME FROM NODES ORDER BY NODE_NAME ASC;
    NODE_NAME      | NODE_STATE | IS_PRIMARY | IS_READONLY | NODE_TYPE |  SUBCLUSTER_NAME
-------------------+------------+------------+-------------+-----------+-------------------
 v_verticadb_node0001 | UP       | t          | f           | PERMANENT | default_subcluster
 v_verticadb_node0002 | UP       | t          | f           | PERMANENT | default_subcluster
 v_verticadb_node0003 | UP       | t          | f           | PERMANENT | default_subcluster
 v_verticadb_node0004 | UP       | f          | f           | PERMANENT | analytics
 v_verticadb_node0005 | UP       | f          | f           | PERMANENT | analytics
 v_verticadb_node0006 | UP       | f          | f           | PERMANENT | analytics
(6 rows)
```

ODBC_COLUMNS

Provides table column information. The format is defined by the ODBC standard for the ODBC SQLColumns metadata. Details on the ODBC SQLColumns format are available in the ODBC specification: http://msdn.microsoft.com/en-us/library/windows/desktop/ms711683%28v=vs.85%29.aspx .

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR	The name of the schema in which the column resides. If the column does not reside in a schema, this field is empty.
TABLE_NAME	VARCHAR	The name of the table in which the column resides.
COLUMN_NAME	VARCHAR	The name of the column.
DATA_TYPE	INTEGER	The data type of the column. This can be an ODBC SQL data type or a driver-specific SQL data type. This column corresponds to the ODBC_TYPE column in the TYPES table.
DATA_TYPE_NAME	VARCHAR	The driver-specific data type name.
COLUMN_SIZE	INTEGER	The ODBC-defined data size of the column.
BUFFER_LENGTH	INTEGER	The transfer octet length of a column is the maximum number of bytes returned to the application when data is transferred to its default C data type. See http://msdn.microsoft.com/en-us/library/windows/desktop/ms713979%28v=vs.85%29.aspx
DECIMAL_DIGITS	INTEGER	The total number of significant digits to the right of the decimal point. This value has no meaning for non-decimal data types.
NUM_PREC_RADIX	INTEGER	The radix Vertica reports decimal_digits and columns_size as. This value is always 10, because it refers to a number of decimal digits, rather than a number of bits.
NULLABLE	BOOLEAN	Indicates whether the column can contain null values. Values are 0 or 1.
REMARKS	VARCHAR	The textual remarks for the column.
COLUMN_DEFAULT	VARCHAR	The default value of the column.
SQL_TYPE_ID	INTEGER	The SQL data type of the column.
SQL_DATETIME_SUB	VARCHAR	The subtype for a datetime data type. This value has no meaning for non-datetime data types.
CHAR_OCTET_LENGTH	INTEGER	The maximum length of a string or binary data column.
ORDINAL_POSITION	INTEGER	Indicates the position of the column in the table definition.

IS_NULLABLE	VARCHAR	Values can be YES or NO, determined by the value of the NULLABLE column.
IS_IDENTITY	BOOLEAN	Indicates whether the column is a sequence, for example, an auto-increment column.

PASSWORD_AUDITOR

Stores information about individual users and their password information. This table also indicates if users are using hash authentication, which is the associated security algorithm.

Column Name	Data Type	Description
USER_ID	INTEGER	Unique ID for the user.
USER_NAME	VARCHAR	Name of the user.
ACCTEXPIRED	BOOLEAN	Indicates if the user's password expires. 'f' indicates that it does not expire. 't' indicates that it does expire.
SECURITY_ALGORITHM	VARCHAR	User-level security algorithm for hash authentication. Valid values: • 'NONE' (Default. System-level security algorithm is used.) • 'SHA512' • 'MD5'
SYSTEM_SECURITY_ALGORITHM	VARCHAR	System-level security algorithm for hash authentication. Valid values: • 'SHA512' (Default) • 'MD5'
EFFECTIVE_SECURITY_ALGORITHM	VARCHAR	The resulting security algorithm, depending on the values of SECURTY_ALGORITHM and SYSTEM_SECURITY_ALGORITHM .
CURRENT_SECURITY_ALGORITHM	VARCHAR	The security algorithm used to hash the user's current password. This can differ from the EFFECTIVE_SECURITY_ALGORITHM if a user hasn't reset their password since a change in the EFFECTIVE_SECURITY_ALGORITHM. Valid values: • 'NONE' (Default. System-level security algorithm is used.) • 'SHA512' • 'MD5'

PASSWORDS

Contains information on current user passwords. This table also includes information on past passwords if any Profiles have PASSWORD_REUSE_TIME or PASSWORD_REUSE_MAX parameters set. See CREATE PROFILE for details.

Column Name	Data Type	Description
USER_ID	INTEGER	The ID of the user who owns the password.

USER_NAME	VARCHAR	The name of the user who owns the password.
PASSWORD	VARCHAR	The hashed password.
PASSWORD_CREATE_TIME	DATETIME	The date and time when the password was created.
IS_CURRENT_PASSWORD	BOOLEAN	Denotes whether this is the user's current password. Non-current passwords are retained to enforce password reuse limitations.
PROFILE_ID	INTEGER	The ID number of the profile to which the user is assigned.
PROFILE_NAME	VARCHAR	The name of the profile to which the user is assigned.
PASSWORD_REUSE_MAX	VARCHAR	The number password changes that must take place before an old password can be reused.
PASSWORD_REUSE_TIME	VARCHAR	The amount of time that must pass before an old password can be reused.
SALT	VARCHAR	A hex string used to hash the password.

Examples

The following query returns the SHA-512 hashed password and salt of user 'u1'.

```
=> SELECT user_name, password, salt FROM passwords WHERE user_name='u1';
 user_name |                          password                          |               salt
-----------+------------------------------------------------------------+----------------------------------
 u1        | sha512f3f802f1c56e2530cd9c3164cc7b8002ba444c0834160f10 | f05e9d859fb441f9f612f8a787bfc872
(1 row)
```

PRIMARY_KEYS

Provides primary key information.

Column Name	Data Type	Description
CONSTRAINT_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the constraint.
CONSTRAINT_NAME	VARCHAR	The constraint name for which information is listed.
COLUMN_NAME	VARCHAR	The column name for which information is listed.
ORDINAL_POSITION	VARCHAR	The position of the column within the key. The numbering of columns starts at 1.
TABLE_NAME	VARCHAR	The table name for which information is listed.
CONSTRAINT_TYPE	VARCHAR	The constraint type, p , for primary key.
IS_ENABLED	BOOLEAN	Indicates if a table column constraint for a PRIMARY KEY is enabled by default. Can be t (True) or f (False).
TABLE_SCHEMA	VARCHAR	The schema name for which information is listed.

PROFILE_PARAMETERS

Defines what information is stored in profiles.

Column Name	Data Type	Description
PROFILE_ID	INTEGER	The ID of the profile to which this parameter belongs.

PROFILE_NAME	VARCHAR	The name of the profile to which this parameter belongs.
PARAMETER_TYPE	VARCHAR	The policy type of this parameter (password_complexity , password_security , etc.)
PARAMETER_NAME	VARCHAR	The name of the parameter.
PARAMETER_LIMIT	VARCHAR	The parameter's value.

PROFILES

Provides information about password policies that you set using the CREATE PROFILE statement.

Column Name	Data Type	Description
PROFILE_ID	INTEGER	Unique identifier for the profile.
PROFILE_NAME	VARCHAR	Profile name.
PASSWORD_LIFE_TIME	VARCHAR	Number of days before the user's password expires. After expiration, the user is forced to change passwords during login or warned that their password has expired if password_grace_time is set to a value other than zero or unlimited.
PASSWORD_MIN_LIFE_TIME	VARCHAR	The number of days a password must be set before it can be reset.
PASSWORD_MIN_CHAR_CHANGE	VARCHAR	The minimum number of characters that must be different from the previous password when performing a password reset.
PASSWORD_GRACE_TIME	VARCHAR	Number of days users are allowed to log in after their passwords expire. During the grace time, users are warned about their expired passwords when they log in. After the grace period, the user is forced to change passwords if he or she hasn't already.
PASSWORD_REUSE_MAX	VARCHAR	Number of password changes that must occur before the current password can be reused.
PASSWORD_REUSE_TIME	VARCHAR	Number of days that must pass after setting a password before it can be used again.
FAILED_LOGIN_ATTEMPTS	VARCHAR	Number of consecutive failed login attempts that triggers Vertica to lock the account.
PASSWORD_LOCK_TIME	VARCHAR	Number of days an account is locked after being locked due to too many failed login attempts.
PASSWORD_MAX_LENGTH	VARCHAR	Maximum number of characters allowed in a password.
PASSWORD_MIN_LENGTH	VARCHAR	Minimum number of characters required in a password.
PASSWORD_MIN_LETTERS	VARCHAR	The minimum number of letters (either uppercase or lowercase) required in a password.
PASSWORD_MIN_LOWERCASE_LETTERS	VARCHAR	The minimum number of lowercase.
PASSWORD_MIN_UPPERCASE_LETTERS	VARCHAR	The minimum number of uppercase letters required in a password.
PASSWORD_MIN_DIGITS	VARCHAR	The minimum number of digits required in a password.
PASSWORD_MIN_SYMBOLS	VARCHAR	The minimum of symbols (for example, !, #, $, etc.) required in a password.

Notes

Non-superusers querying this table see only the information for the profile to which they are assigned.

PROJECTION_CHECKPOINT_EPOCHS

Provides details on checkpoint epochs, applies only to Enterprise Mode.

Column Name	Data Type	Description
NODE_ID	INTEGER	Unique numeric identifier of this projection's node.
NODE_NAME	VARCHAR	Name of this projection's node.
PROJECTION_SCHEMA_ID	INTEGER	Unique numeric identifier of the projection schema.
PROJECTION_SCHEMA	VARCHAR	Name of the projection schema.
PROJECTION_ID	INTEGER	Unique numeric identifier of this projection.
PROJECTION_NAME	VARCHAR	Name of this projection.
IS_UP_TO_DATE	BOOLEAN	Specifies whether the projection is up to date and available to participate in query execution.
CHECKPOINT_EPOCH	INTEGER	Checkpoint epoch of the projection on the corresponding node. Data up to and including this epoch is in persistent storage, and can be recovered in the event of node failure.
WOULD_RECOVER	BOOLEAN	Determines whether data up to and including CHECKPOINT_EPOCH can be used to recover from an unclean shutdown : • t : CHECKPOINT_EPOCH is less than the cluster's Last Good Epoch, so data up to and including this epoch can be used during recovery. • f : Vertica must use Last Good Epoch to recover data for this projection. See also: GET_LAST_GOOD_EPOCH
IS_BEHIND_AHM	BOOLEAN	Specifies whether CHECKPOINT_EPOCH is less than the AHM (ancient history mark). If set to t (true), data for this projection cannot rolled back. See also: GET_AHM_EPOCH

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

Examples

```
=> SELECT node_name, projection_schema, projection_name, is_up_to_date, checkpoint_epoch FROM projection_checkpoint_epochs
   WHERE projection_name ilike 't1_b%' ORDER BY projection_name, node_name;
   node_name     | projection_schema | projection_name | is_up_to_date | checkpoint_epoch
-----------------+-------------------+-----------------+---------------+------------------
 v_vmart_node0001 | public           | t1_b1           | t             |              965
 v_vmart_node0002 | public           | t1_b1           | t             |              965
 v_vmart_node0003 | public           | t1_b1           | t             |              965
 v_vmart_node0001 | public           | t1_b0           | t             |              965
 v_vmart_node0002 | public           | t1_b0           | t             |              965
 v_vmart_node0003 | public           | t1_b0           | t             |              965

```

PROJECTION_COLUMNS

Provides information about projection columns, such as encoding type, sort order, type of statistics, and the time at which columns statistics were last updated.

Column Name	Data Type	Description
PROJECTION_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the projection.
PROJECTION_NAME	VARCHAR	The projection name for which information is listed.
PROJECTION_COLUMN_NAME	VARCHAR	The projection column name.
COLUMN_POSITION	INTEGER	The ordinal position of a projection's column used in the CREATE PROJECTION statement.
SORT_POSITION	INTEGER	The projection's column sort specification, as specified in CREATE PROJECTION .. ORDER BY clause. If the column is not included in the projection's sort order, SORT_POSITION output is NULL.
COLUMN_ID	INTEGER	A unique numeric object ID (OID) that identifies the associated projection column object and is assigned by the Vertica catalog. This field is helpful as a key to other system tables.
DATA_TYPE	VARCHAR	Matches the corresponding table column data type (see V_CATALOG.COLUMNS). DATA_TYPE is provided as a complement to ENCODING_TYPE .

ENCODING_TYPE	VARCHAR	The encoding type defined on the projection column.
ACCESS_RANK	INTEGER	The access rank of the projection column. See the ACCESSRANK parameter in the CREATE PROJECTION statement for more information.
GROUP_ID	INTEGER	A unique numeric ID (OID) that identifies the group and is assigned by the Vertica catalog.
TABLE_SCHEMA	VARCHAR	The name of the schema in which the projection is stored.
TABLE_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the table.
TABLE_NAME	VARCHAR	The table name that contains the projection.
TABLE_COLUMN_ID	VARCHAR	Catalog-assigned VARCHAR value that uniquely identifies a table column.
TABLE_COLUMN_NAME	VARCHAR	The projection's corresponding table column name.
STATISTICS_TYPE	VARCHAR	The type of statistics the column contains: • NONE : No statistics • ROWCOUNT : Set by ANALYZE_ROW_COUNT • FULL : Set by running ANALYZE_STATISTICS
STATISTICS_UPDATED_TIMESTAMP	TIMESTAMPTZ	The time at which the columns statistics were last updated by ANALYZE_STATISTICS . By querying this column, along with STATISTICS_TYPE and PROJECTION_COLUMN_NAME , you can identify projection columns whose statistics need updating. See also system table PROJECTIONS .
IS_EXPRESSION	BOOLEAN	Indicates whether this projection column is calculated with an expression. For aggregate columns, IS_EXPRESSION is always true.
IS_AGGREGATE	BOOLEAN	Indicates whether the column is an aggregated column in a live aggregate projection. IS_AGGREGATE is always false for Top-K projection columns.
PARTITION_BY_POSITION	INTEGER	Position of that column in the PARTITION BY and GROUP BY clauses, if applicable.
ORDER_BY_POSITION	INTEGER	Set only for Top-K projections , specifies the column's position in the ORDER BY clause, as defined in the projection definition's window partition clause . If the column is omitted from the ORDER BY clause, ORDER_BY_POSITION output is NULL.
ORDER_BY_TYPE	INTEGER	Type of sort order: • ASC NULLS FIRST • ASC NULLS LAST • DESC NULLS FIRST • DESC NULLS LAST
COLUMN_EXPRESSION	VARCHAR	Expression that calculates the column value.

Examples

See Statistics Data in PROJECTION_COLUMNS

See also

- PROJECTIONS
- ANALYZE_STATISTICS
- CREATE PROJECTION

PROJECTION_DELETE_CONCERNS

Lists projections whose design are liable to cause performance issues when deleting data. This table is generated by calling the EVALUATE_DELETE_PERFORMANCE function. See Optimizing DELETE and UPDATE for more information.

Column Name	Data Type	Description
PROJECTION_ID	INTEGER	The ID number of the projection
PROJECTION_SCHEMA	VARCHAR	The schema containing the projection
PROJECTION_NAME	VARCHAR	The projection's name
CREATION_TIME	TIMESTAMPTZ	When the projection was created
LAST_MODIFIED_TIME	TIMESTAMPTZ	When the projection was last modified
COMMENT	VARCHAR	A comment describing the potential delete performance issue.

PROJECTIONS

Provides information about projections.

Column Name	Data Type	Description
PROJECTION_SCHEMA_ID	INTEGER	A unique numeric ID that identifies the specific schema that contains the projection and is assigned by the Vertica catalog.
PROJECTION_SCHEMA	VARCHAR	The name of the schema that contains the projection.
PROJECTION_ID	INTEGER	A unique numeric ID that identifies the projection and is assigned by the Vertica catalog.
PROJECTION_NAME	VARCHAR	The projection name for which information is listed.
PROJECTION_BASENAME	VARCHAR	The base name used for other projections: • For auto-created projections, identical to ANCHOR_TABLE_NAME . • For a manually-created projection, the name specified in the CREATE PROJECTION statement.
OWNER_ID	INTEGER	A unique numeric ID that identifies the projection owner and is assigned by the Vertica catalog.
OWNER_NAME	VARCHAR	The name of the projection's owner.
ANCHOR_TABLE_ID	INTEGER	The unique numeric identification (OID) of the projection's anchor table.
ANCHOR_TABLE_NAME	VARCHAR	The name of the projection's anchor table.
NODE_ID	INTEGER	A unique numeric ID (OID) for any nodes that contain any unsegmented projections.
NODE_NAME	VARCHAR	The names of any nodes that contain the projection. This column returns information for unsegmented projections only.
IS_PREJOIN	BOOLEAN	Deprecated, always set to f (false).
CREATED_EPOCH	INTEGER	The epoch in which the projection was created.

CREATE_TYPE	VARCHAR	The method in which the projection was created: • CREATE PROJECTION : A custom projection created using CREATE PROJECTION. • CREATE TABLE : A superprojection that was automatically created when its associated table was created using CREATE TABLE. • ALTER TABLE : The system automatically created the key projection in response to a non-empty table. • CREATE TABLE WITH PROJ CLAUSE : A superprojection that was automatically created using CREATE TABLE. • DELAYED_CREATION : A superprojection that was automatically created when data was loaded for the first time into a new table. • DESIGNER : A projection created by Database Designer. • SYSTEM TABLE : A projection that was automatically created for a system table. Rebalancing does not change the CREATE_TYPE value for a projection.
VERIFIED_FAULT_TOLERANCE	INTEGER	The projection K-safe value. This value can be greater than the database K-safety value (if more replications of a projection exist than are required to meet the database K-safety). This value cannot be less than the database K-safe setting.
IS_UP_TO_DATE	BOOLEAN	Specifies whether projection data is up to date . Only up-to-date projections are available to participate in query execution.
HAS_STATISTICS	BOOLEAN	Specifies whether there are statistics for any column in the projection. HAS_STATISTICS returns true only when all non-epoch columns for a table or table partition have full statistics. For details, see Collecting table statistics and Collecting partition statistics . **Note** Projections that have no data never have full statistics. Query system table PROJECTION_STORAGE to determine whether your projection contains data.
IS_SEGMENTED	BOOLEAN	Specifies whether the projection is segmented.
SEGMENT_EXRESSION	VARCHAR	The segmentation expression used for the projection. In the following example for the clicks_agg projection, the following values: hash(clicks.user_id, (clicks.click_time)::date) indicate that the projection was created with the following expression: SEGMENTED BY HASH(clicks.user_id, (clicks.click_time)::date)
SEGMENT_RANGE	VARCHAR	The percentage of projection data stored on each node, according to the segmentation expression. For example, segmenting a projection by the HASH function on all nodes results in a SEGMENT_RANGE value such as the following: implicit range: v_vmart_node0002[33.3%] v_vmart_node0003[33.3%] v_vmart_node0001[33.3%]
IS_SUPER_PROJECTION	BOOLEAN	Specifies whether a projection is a superprojection.
IS_KEY_CONSTRAINT_PROJECTION	BOOLEAN	Indicates whether a projection is a key constraint projection: • t : A key constraint projection that validates a key constraint. Vertica uses the projection to efficiently enforce at least one enabled key constraint. • f : Not a projection that validates a key constraint.

HAS_EXPRESSIONS	BOOLEAN	Specifies whether this projection has expressions that define the column values. HAS_EXPRESSIONS is always true for live aggregate projections.
IS_AGGREGATE_PROJECTION	BOOLEAN	Specifies whether this projection is a live aggregate projection.
AGGREGATE_TYPE	VARCHAR	Specifies the type of live aggregate projection: • GROUPBY • TOPK
IS_SHARED	BOOLEAN	Indicates whether the projection is located on shared storage.

PARTITION_RANGE_MIN
PARTITION_RANGE_MAX
	VARCHAR	Populated only if a projection specifies a partition range , the lowest and highest partition keys of the range. For example, following projection defines a range of orders that were placed since the first of the year:
		`=> CREATE PROJECTION ytd_orders AS SELECT * FROM store_orders ORDER BY order_date`
		`  ON PARTITION RANGE BETWEEN date_trunc('year',now())::date AND NULL;`
		Given that range, columns PARTITION_RANGE_MIN and PARTITION_RANGE_MAX contain the following values:
		`=> SELECT projection_name partition_range_min, partition_range_min, partition_range_max FROM projections WHERE projection_name ILIKE 'ytd_orders%';`
		`partition_range_min | partition_range_min | partition_range_max`
		`---+---+---`
		`ytd_orders_b1 | 2021-01-01 | infinity`
		`ytd_orders_b0 | 2021-01-01 | infinity`
		`(2 rows)`

PARTITION_RANGE_MIN_EXPRESSION
PARTITION_RANGE_MAX_EXPRESSION
	VARCHAR	Populated only if a projection specifies partition range , the minimum and maximum range expressions as defined in the projection DDL. For example, following projection defines a range of orders that were placed since the third quarter of last year:
		`=> CREATE PROJECTION q3_td AS SELECT * FROM store_orders ORDER BY order_date`
		`  ON PARTITION RANGE BETWEEN add_months(date_trunc('year',now()), -3)::date AND NULL;`
		Given that definition, PARTITION_RANGE_MIN_EXPRESSION and PARTITION_RANGE_MAX_EXPRESSION are set as follows:
		`=> SELECT projection_name, partition_range_min_expression, partition_range_max_expression FROM projections WHERE projection_name ILIKE 'Q3_td%';`
		`projection_name | partition_range_min_expression | partition_range_max_expression`
		`---+---+---`
		`q3_td_b1 | add_months(date_trunc('year', now()), (-3)) | NULL`
		`q3_td_b0 | add_months(date_trunc('year', now()), (-3)) | NULL`

PROJECTION_COLUMNS

RESOURCE_POOL_DEFAULTS

Returns default parameter settings for built-in and user-defined resource pools. Use ALTER RESOURCE POOL to restore resource pool parameters to their default settings.

For information about valid parameters for built-in resource pools and their default settings, see Built-in resource pools configuration .

To obtain a resource pool's current settings, query system table RESOURCE_POOLS .

Privileges

None

RESOURCE_POOLS

Displays settings for built-in and user-defined resource pools. For information about defining resource pools, see CREATE RESOURCE POOL and ALTER RESOURCE POOL .

Column Name	Data Type	Description
POOL_ID	INTEGER	Unique identifier for the resource pool
NAME	VARCHAR	The name of the resource pool.
SUBCLUSTER_OID	INTEGER	Unique identifier for a subcluster-specific resource pool. For global resource pools, 0 is returned.
SUBCLUSTER_NAME	VARCHAR	Specifies the subcluster that the subcluster-specific resource pool belongs to.If there are subcluster-specific resource pools with the same name on separate subclusters, multiple entries are returned. For global resource pools, this column is blank.
IS_INTERNAL	BOOLEAN	Specifies whether this pool is a built-in pool .
MEMORYSIZE	VARCHAR	The amount of memory allocated to this resource pool.
MAXMEMORYSIZE	VARCHAR	Value assigned as the maximum size this resource pool can grow by borrowing memory from the GENERAL pool.
MAXQUERYMEMORYSIZE	VARCHAR	The maximum amount of memory allocated by this pool to process any query.
EXECUTIONPARALLELISM	INTEGER	Limits the number of threads used to process any single query issued in this resource pool.
PRIORITY	INTEGER	Specifies priority of queries in this pool when they compete for resources in the GENERAL pool.
RUNTIMEPRIORITY	VARCHAR	The run-time priority defined for this pool, indicates how many run-time resources (CPU, I/O bandwidth) the Resource Manager should dedicate to running queries in the resource pool. Valid values are: • HIGH • MEDIUM (default) • LOW These values are relative to each other. Queries with a HIGH run-time priority are given more CPU and I/O resources than those with a MEDIUM or LOW run-time priority.
RUNTIMEPRIORITYTHRESHOLD	INTEGER	Limits in seconds how soon a query must finish before the Resource Manager assigns to it the resource pool's RUNTIMEPRIORITY setting.
QUEUETIMEOUT	INTEGER INTERVAL	The maximum length of time requests can wait for resources to become available before being rejected, specified in seconds or as an interval . This value is set by the pool's QUEUETIMEOUT parameter.
PLANNEDCONCURRENCY	INTEGER	The preferred number of queries that execute concurrently in this resource pool, specified by the pool's PLANNEDCONCURRENCY parameter.
MAXCONCURRENCY	INTEGER	The maximum number of concurrent execution slots available to the resource pool, specified by the pool MAXCONCURRENCY parameter.

RUNTIMECAP	INTERVAL	The maximum time a query in the pool can execute.
SINGLEINITIATOR	BOOLEAN	Set for backward compatibility.
CPUAFFINITYSET	VARCHAR	The set of CPUs on which queries associated with this pool are executed. For example: • 0, 2-4 : Specifies CPUs 0, 2, 3, and 4 • 25% : A percentage of available CPUs, rounded down to whole CPUs.
CPUAFFINITYMODE	VARCHAR	Specifies whether to share usage of the CPUs assigned to this resource pool by CPUAFFINITYSET , one of the following: • SHARED : Queries that run in this pool share its CPUAFFINITYSET CPUs with other Vertica resource pools. • EXCLUSIVE : Dedicates CPUAFFINITYSET CPUs to this resource pool only, and excludes other Vertica resource pools. If CPUAFFINITYSET is set as a percentage, then that percentage of CPU resources available to Vertica is assigned solely for this resource pool. • ANY : Queries in this resource pool can run on any CPU.
CASCADETO	VARCHAR	A secondary resource pool for executing queries that exceed the RUNTIMECAP setting of this resource pool.
CASCADETOSUBCLUSTERPOOL	BOOLEAN	Specifies whether this resource pool cascades to a subcluster-level resource pool.

ROLES

Contains the names of all roles the user can access, along with any roles that have been assigned to those roles.

> **Tip**
> You can also use the function HAS_ROLE to see if a role is available to a user.

Column Name	Data Type	Description
ASSIGNED_ROLES	VARCHAR	The names of any roles that have been granted to this role. By enabling the role, the user also has access to the privileges of these additional roles. **Note** An asterisk (*) appended to a role in this column indicates that the user can grant the role to other users.
NAME	VARCHAR	The name of a role that the user can access.
ROLE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies therole.
LDAP_DN	VARCHAR	Indicates whether or not the Vertica Analytic Database role maps to an LDAP Link group. When the column is set to dn , the Vertica role maps to LDAP Link.
LDAP_URI_HASH	VARCHAR	The URI hash number for the LDAP role.

IS_ORPHANED_FROM_LDAP	VARCHAR	Indicates if the role is disconnected (orphaned) from LDAP, valid values are: t - role is orphaned f - role is not orphaned For more information see Troubleshooting LDAP link issues

See also

- GRANTS
- HAS_ROLE
- USERS

ROUTING_RULES

Lists the routing rules that map incoming IP addresses to a load balancing group.

Column Name	Data Type	Description
NAME	VARCHAR	The name of the routing rule.
SOURCE_ADDRESS	VARCHAR	The IP address range in CIDR format that this rule applies to.
DESTINATION_NAME	VARCHAR	The load balance group that handles connections for this rule.

Examples

```
=> SELECT * FROM routing_rules;
-[ RECORD 1 ]----+-----------------
name             | internal_clients
source_address   | 192.168.1.0/24
destination_name | group_1
-[ RECORD 2 ]----+-----------------
name             | etl_rule
source_address   | 10.20.100.0/24
destination_name | group_2
-[ RECORD 3 ]----+-----------------
name             | subnet_192
source_address   | 192.0.0.0/8
destination_name | group_all
-[ RECORD 4 ]----+--------------
name             | all_ipv6
source_address   | 0::0/0
destination_name | default_ipv6
```

See also

SCHEMATA

Provides information about schemas in the database.

Column Name	Data Type	Description
SCHEMA_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the specific schema.
SCHEMA_NAME	VARCHAR	Schema name for which information is listed.
SCHEMA_OWNER_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the owner who created the schema.
SCHEMA_OWNER	VARCHAR	Name of the owner who created the schema.

SYSTEM_SCHEMA_CREATOR	VARCHAR	Creator information for system schema or NULL for non-system schema
CREATE_TIME	TIMESTAMPTZ	Time when the schema was created.
IS_SYSTEM_SCHEMA	BOOLEAN	Indicates whether the schema was created for system use, where *t* is true and *f* is false.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

SEQUENCES

Displays information about sequences .

Column Name	Data Type	Description
SEQUENCE_SCHEMA	VARCHAR	Schema in which the sequence was created.
SEQUENCE_NAME	VARCHAR	Name of the sequence defined in the CREATE SEQUENCE statement.
OWNER_NAME	VARCHAR	Name of the owner.
IDENTITY_TABLE_NAME	VARCHAR	If created by an AUTO_INCREMENT or IDENTITY column, the name of its table.
SESSION_CACHE_COUNT	INTEGER	Count of values cached in a session.
ALLOW_CYCLE	BOOLEAN	Values allowed to cycle when a sequence reaches its minimum or maximum value. See CYCLE | NO CYCLE parameter in CREATE SEQUENCE .
OUTPUT_ORDERED	BOOLEAN	Values guaranteed to be ordered (always false).
INCREMENT_BY	INTEGER	Sequence values are incremented by this number (negative for reverse sequences).
MINIMUM	INTEGER	Minimum value the sequence can generate.
MAXIMUM	INTEGER	Maximum value the sequence can generate.
CURRENT_VALUE	INTEGER	Specifies how many sequence numbers Vertica has distributed to the nodes in your cluster. Includes all nodes.
SEQUENCE_SCHEMA_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the schema.
SEQUENCE_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the sequence.
OWNER_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the user who created the sequence.
IDENTITY_TABLE_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the table to which the column belongs (if created by an auto_increment or identity column).

Examples

Create a simple sequence:

```
=> CREATE SEQUENCE my_seq MAXVALUE 5000 START 150;
CREATE SEQUENCE
```

Return information about the sequence you just created:

```
=> \x
Expanded display is on.
=> SELECT * FROM sequences;
-[ RECORD 1 ]-------+------------------
sequence_schema     | public
sequence_name       | my_seq
owner_name          | dbadmin
identity_table_name |
session_cache_count | 250000
allow_cycle         | f
output_ordered      | f
increment_by        | 1
minimum             | 1
maximum             | 5000
current_value       | 149
sequence_schema_id  | 45035996273704966
sequence_id         | 45035996273844996
owner_id            | 45035996273704962
identity_table_id   | 0
```

An identity column is a sequence available only for numeric column types. To identify what column in a table, if any, is an identity column, search the COLUMNS table to find the identity column in a table:

```
=> CREATE TABLE testid (c1 IDENTITY(1, 1, 1000), c2 INT);
=> \x
Expanded display is on.
=> SELECT * FROM COLUMNS WHERE is_identity='t' AND table_name='testid';
-[ RECORD 1 ]------------+------------------
table_id                 | 45035996274150730
table_schema             | public
table_name               | testid
is_system_table          | f
column_name              | c1
data_type                | int
data_type_id             | 6
data_type_length         | 8
character_maximum_length |
numeric_precision        |
numeric_scale            |
datetime_precision       |

Use the SEQUENCES table to get detailed information about the sequence in testid:

```
=> SELECT * FROM sequences WHERE identity_table_name='testid';
-[ RECORD 1 ]-------+-------------------
sequence_schema     | public
sequence_name       | testid_c1_seq
owner_name          | dbadmin
identity_table_name | testid
session_cache_count | 1000
allow_cycle         | f
output_ordered      | f
increment_by        | 1
minimum             | 1
maximum             | 9223372036854775807
current_value       | 0
sequence_schema_id  | 45035996273704976
sequence_id         | 45035996274150770
owner_id            | 45035996273704962
identity_table_id   | 45035996274150768
```

Use the vsql command \ds to return a list of sequences. The following results show the two sequences created in the preceding examples. If more sequences existed, the table would list them.

The CurrentValue of the new sequence is one less than the start number you specified in the CREATE SEQUENCE and IDENTITY commands, because you have not yet used NEXTVAL to instantiate the sequences to assign their cache or supply their first start values.

```
=> \ds
 List of Sequences
-[ RECORD 1 ]+-------------------
Schema       | public
Sequence     | my_seq
CurrentValue | 149

Minimum      | 1
Maximum      | 9223372036854775807
AllowCycle   | f
Comment      |
```

SESSION_SUBSCRIPTIONS

In an Eon Mode database, lists the shard subscriptions for all nodes, and whether the subscriptions are used to resolve queries for the current session. Nodes that will participate in resolving queries in this session have TRUE in their IS_PARTICIPATING column.

Column Name	Data Type	Description
NODE_OID	INTEGER	The OID of the subscribing node.
NODE_NAME	VARCHAR	The name of the subscribing node.
SHARD_OID	INTEGER	The OID of the shard the node subscribes to.
SHARD_NAME	VARCHAR	The name of the shard the node subscribes to.

IS_PARTICIPATING	BOOLEAN	Whether this subscription is used when resolving queries in this session.
IS_COLLABORATING	BOOLEAN	Whether this subscription is used to collaborate with a participating node when executing queries . This value is only true when queries are using elastic crunch scaling.

Examples

The following example demonstrates listing the subscriptions that are either participating or collaborating in the current session:

```
=> SELECT node_name, shard_name, is_collaborating, is_participating
      FROM V_CATALOG.SESSION_SUBSCRIPTIONS
      WHERE is_participating = TRUE OR is_collaborating = TRUE
      ORDER BY shard_name, node_name;
     node_name       | shard_name  | is_collaborating | is_participating
---------------------+-------------+------------------+------------------
 v_verticadb_node0004 | replica     | f                | t
 v_verticadb_node0005 | replica     | f                | t
 v_verticadb_node0006 | replica     | t                | f
 v_verticadb_node0007 | replica     | f                | t
 v_verticadb_node0008 | replica     | t                | f
 v_verticadb_node0009 | replica     | t                | f
 v_verticadb_node0007 | segment0001 | f                | t
 v_verticadb_node0008 | segment0001 | t                | f
 v_verticadb_node0005 | segment0002 | f                | t
 v_verticadb_node0009 | segment0002 | t                | f
 v_verticadb_node0004 | segment0003 | f                | t
 v_verticadb_node0006 | segment0003 | t                | f
(12 rows)
```

SHARDS

Lists the shards in your database.

Column Name	Data Type	Description
SHARD_OID	INTEGER	The OID of the shard.
SHARD_NAME	VARCHAR	The name of the shard.
SHARD_TYPE	VARCHAR	The type of the shard.
LOWER_HASH_BOUND	VARCHAR	The lower hash bound of the shard.
UPPER_HASH_BOUND	VARCHAR	The upper hash bound of the shard.
IS_REPLICATED	BOOLEAN	Defines if the shard is replicated.
HAS_OBJECTS	BOOLEAN	Defines if the shard contains objects.

Examples

```
=> SELECT * FROM SHARDS;
-[ RECORD 1 ]----+-----------------
shard_oid        | 45035996273704980
shard_name       | replica
shard_type       | Replica
lower_hash_bound |
upper_hash_bound |
is_replicated    | t
has_objects      | t
...
```

STORAGE_LOCATIONS

Provides information about storage locations, including IDs, labels, and status.

Column Name	Data Type	Description
LOCATION_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thestorage location.
NODE_NAME	VARCHAR	The node name on which the storage location exists.
LOCATION_PATH	VARCHAR	The path where the storage location is mounted.
LOCATION_USAGE	VARCHAR	The type of information stored in the location: • DATA: Only data is stored in the location. • TEMP: Only temporary files that are created during loads or queries are stored in the location. • DATA,TEMP: Both types of files are stored in the location. • USER: The storage location can be used by users without their own credentials or dbadmin access. Users gain access to data by being granted access to the user storage location. • CATALOG : The area is used for the Vertica catalog. This usage is set internally and cannot be removed or changed.
SHARING_TYPE	VARCHAR	How this location is shared among database nodes, if it is: • SHARED: The path used by the storage location is used by all nodes. See the SHARED parameter to CREATE LOCATION . • COMMUNAL: the location is used for communal storage in Eon Mode. • NONE: The location is not shared among nodes.
IS_RETIRED	BOOLEAN	Whether the storage location has been retired. This column has a value of t (true) if the location is retired, or f (false) if it is not.
LOCATION_LABEL	VARCHAR	The label associated with a specific storage location, added with the ALTER_LOCATION_LABEL function.
RANK	INTEGER	The Access rank value either assigned or supplied to the storage location, as described in Prioritizing column access speed .
THROUGHPUT	INTEGER	The throughput performance of the storage location, measured in MB/sec. You can get location performance values using MEASURE_LOCATION_PERFORMANCE , and set them with the SET_LOCATION_PERFORMANCE function.
LATENCY	INTEGER	The measured latency of the storage location as number of data seeks per second. You can get location performance values using MEASURE_LOCATION_PERFORMANCE , and set them with the SET_LOCATION_PERFORMANCE function.
MAX_SIZE	INTEGER	Maximum size of the storage location in bytes.
DISK_PERCENT	VARCHAR	Maximum percentage of available node disk space that this storage location can use, set only if depot size is defined as a percentage, otherwise blank.

Privileges

Superuser

SUBCLUSTER_RESOURCE_POOL_OVERRIDES

Displays subcluster-level overrides of settings for built-in global resource pools.

Column Name	Data Type	Description
POOL_OID	INTEGER	Unique identifier for the resource pool with settings overrides.
NAME	VARCHAR	The name of the built-in resource pool.
SUBCLUSTER_OID	INTEGER	Unique identifier for the subcluster with settings that override the global resource pool settings.
SUBCLUSTER_NAME	VARCHAR	The name of the subcluster with settings that overrides the global resource pool settings.
MEMORYSIZE	VARCHAR	The amount of memory allocated to the global resource pool.
MAXMEMORYSIZE	VARCHAR	Value assigned as the maximum size this resource pool can grow by borrowing memory from the GENERAL pool.
MAXQUERYMEMORYSIZE	VARCHAR	The maximum amount of memory allocated by this pool to process any query.

SUBCLUSTERS

This table lists all of the subclusters defined in the database. It contains an entry for each node in the database listing which subcluster it belongs to. Any subcluster that does not contain a node has a single entry in this table with empty NODE_NAME and NODE_OID columns. This table is only populated if the database is running in Eon Mode.

Column Name	Data Type	Description
SUBCLUSTER_OID	INTEGER	Unique identifier for the subcluster.
SUBCLUSTER_NAME	VARCHAR	The name of the subcluster.
NODE_OID	INTEGER	The catalog-assigned ID of the node.
NODE_NAME	VARCHAR	The name of the node.
PARENT_OID	INTEGER	The unique ID of the parent of the node (the database).
PARENT_NAME	VARCHAR	The name of the parent of the node (the database name).
IS_DEFAULT	BOOLEAN	Whether the subcluster is the default cluster .
IS_PRIMARY	BOOLEAN	Whether the subcluster is a primary subcluster .
CONTROL_SET_SIZE	INTEGER	The number of control nodes defined for this subcluster. This value is -1 when the large cluster feature is not enabled, or when every node in the subcluster must be a control node. See Large cluster for more information.

Examples

```
=> \x
Expanded display is on.
dbadmin=> SELECT * FROM SUBCLUSTERS;
-[ RECORD 1 ]----+--------------------
subcluster_oid   | 45035996273704978
subcluster_name  | default_subcluster
node_oid         | 45035996273704982
node_name        | v_verticadb_node0001
parent_oid       | 45035996273704976
parent_name      | verticadb
is_default       | t
is_primary       | t
control_set_size | -1
-[ RECORD 2 ]----+--------------------
subcluster_oid   | 45035996273704978
subcluster_name  | default_subcluster
node_oid         | 45035996273840970
node_name        | v_verticadb_node0002
parent_oid       | 45035996273704976
parent_name      | verticadb
is_default       | t
is_primary       | t
control_set_size | -1
-[ RECORD 3 ]----+--------------------
subcluster_oid   | 45035996273704978
subcluster_name  | default_subcluster
node_oid         | 45035996273840974
node_name        | v_verticadb_node0003
parent_oid       | 45035996273704976
parent_name      | verticadb
is_default       | t
is_primary       | t
control_set_size | -1
```

SYSTEM_COLUMNS

Provides table column information for SYSTEM_TABLES .

Column Name	Data Type	Description
TABLE_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the table.
TABLE_SCHEMA	VARCHAR	The schema name for which information is listed.
TABLE_NAME	VARCHAR	The table name for which information is listed.
IS_SYSTEM_TABLE	BOOLEAN	Indicates whether the table is a system table, where *t* is true and *f* is false.
COLUMN_ID	VARCHAR	Catalog-assigned VARCHAR value that uniquely identifies a table column.
COLUMN_NAME	VARCHAR	The column name for which information is listed in the database.

DATA_TYPE	VARCHAR	The data type assigned to the column; for example VARCHAR(16).
DATA_TYPE_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the data type.
DATA_TYPE_LENGTH	INTEGER	The maximum allowable length of the data type.
CHARACTER_MAXIMUM_LENGTH	INTEGER	The maximum allowable length of the column.
NUMERIC_PRECISION	INTEGER	The number of significant decimal digits.
NUMERIC_SCALE	INTEGER	The number of fractional digits.
DATETIME_PRECISION	INTEGER	For TIMESTAMP data type, returns the declared precision; returns null if no precision was declared.
INTERVAL_PRECISION	INTEGER	The number of fractional digits retained in the seconds field.
ORDINAL_POSITION	INTEGER	The position of the column respective to other columns in the table.
IS_NULLABLE	BOOLEAN	Indicates whether the column can contain null values, where *t* is true and *f* is false.
COLUMN_DEFAULT	VARCHAR	The default value of a column, such as empty or expression.

SYSTEM_TABLES

Returns a list of all system table names.

Column Name	Data Type	Description
TABLE_SCHEMA_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theschema.
TABLE_SCHEMA	VARCHAR	The schema name in which the system table resides, one of the following: • V_CATALOG • V_MONITOR
TABLE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thetable.
TABLE_NAME	VARCHAR	The name of the system table.
TABLE_DESCRIPTION	VARCHAR	A description of the system table's purpose.
IS_SUPERUSER_ONLY	BOOLEAN	Specifies whether the table is accessible only by superusers by default. If false, then the PUBLIC role has the privileges to access the system table.
IS_MONITORABLE	BOOLEAN	Specifies whether the table is accessible by a user with the SYSMONITOR role enabled.
IS_ACCESSIBLE_DURING_LOCKDOWN	BOOLEAN	Specifies whether RESTRICT_SYSTEM_TABLES_ACCESS revokes privileges from PUBLIC on the system table. These privileges can be restored with RELEASE_SYSTEM_TABLES_ACCESS . In general, this field is set to t (true) for system tables that contain information that is typically needed by most users, such as TYPES . Conversely, this field is set to f (false) for tables with data that should be restricted during lockdown, such as database settings and user information.

TABLE_CONSTRAINTS

Provides information about table constraints.

Column Name	Data Type	Description
CONSTRAINT_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theconstraint.
CONSTRAINT_NAME	VARCHAR	The name of the constraint, if specified as UNIQUE, FOREIGN KEY, NOT NULL, PRIMARY KEY, or CHECK.
CONSTRAINT_SCHEMA_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theschema containing the constraint.
CONSTRAINT_KEY_COUNT	INTEGER	The number of constraint keys.
FOREIGN_KEY_COUNT	INTEGER	The number of foreign keys.
TABLE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thetable.
TABLE_NAME	VARCHAR	The name of the table that contains the UNIQUE, FOREIGN KEY, NOT NULL, or PRIMARY KEY constraint
FOREIGN_TABLE_ID	INTEGER	The unique object ID of the foreign table referenced in a foreign key constraint (zero if not a foreign key constraint).
CONSTRAINT_TYPE	CHAR	Indicates the constraint type. **Valid Values:** • c — check • f — foreign • p — primary • u — unique
IS_ENABLED	BOOLEAN	Indicates if a constraint for a primary key, unique key, or check constraint is currently enabled. Can be t (True) or f (False).
PREDICATE	VARCHAR	For check constraints, the SQL expression.

See also

ANALYZE_CONSTRAINTS

TABLES

Provides information about all tables in the database.

> **Tip**
> Columns TABLE_SCHEMA and TABLE_NAME are case sensitive. To query TABLES on these columns, use the case-insensitive ILIKE predicate. For example:
>
> ```
> SELECT table_schema, table_name FROM v_catalog.tables WHERE table_schema ILIKE 'Store%';
> ```

Column Name	Data Type	Description
TABLE_SCHEMA_ID	INTEGER	A unique numeric ID that identifies the schema and is assigned by the Vertica catalog.
TABLE_SCHEMA	VARCHAR	The schema name for which information is listed.
TABLE_ID	INTEGER	A unique numeric ID that identifies the table and is assigned by the Vertica catalog.

TABLE_NAME	VARCHAR	The table name for which information is listed.
OWNER_ID	INTEGER	A unique numeric ID that identifies the owner and is assigned by the Vertica catalog.
OWNER_NAME	VARCHAR	The name of the user who created the table.
IS_TEMP_TABLE	BOOLEAN	Indicates whether this table is a temporary table.
IS_SYSTEM_TABLE	BOOLEAN	Indicates whether table is a system table.
FORCE_OUTER	INTEGER	Specifies whether this table is joined to another as an inner or outer input. For details, see Controlling join inputs .
IS_FLEXTABLE	BOOLEAN	Indicates whether the table is a Flex table.
IS_SHARED	BOOLEAN	Indicates whether the table is located on shared storage. **Note** In Eon Mode, temporary tables are never shared. If IS_TEMP_TABLE is set to true, Vertica ignores IS_SHARED settings.
HAS_AGGREGATE_PROJECTION	BOOLEAN	Indicates whether the table has live aggregate projections.
SYSTEM_TABLE_CREATOR	VARCHAR	The name of the process that created the table, such as Designer.
PARTITION_EXPRESSION	VARCHAR	The table's partition expression .
CREATE_TIME	TIMESTAMP	Returns the timestamp, indicating when the table was created.
TABLE_DEFINITION	VARCHAR	The COPY statement table definition. This column is applicable only to external tables.
RECOVER_PRIORITY	INTEGER	The priority rank for the table for a Recovery By Table .
STORAGE_MODE	INTEGER	Deprecated, always set to DIRECT.
PARTITION_GROUP_EXPRESSION	VARCHAR	The expression of a GROUP BY clause that qualifies a table's partition clause .
ACTIVE_PARTITION_COUNT	INTEGER	Specifies a table's active partition count as set by CREATE TABLE or ALTER TABLE . If null, the table gets its active partition count from configuration parameter ActivePartitionCount . For details, see Active and inactive partitions .
IS_MERGEOUT_ENABLED	BOOLEAN	Specifies whether mergeout is enabled (t) or disabled (f) on ROS containers that consolidate projection data of this table. By default, mergeout is enabled on all tables. You can disable mergeout on a table with ALTER TABLE . For details, see Disabling mergeout on specific tables .

Examples

Find when tables were created:

```
=> SELECT table_schema, table_name, create_time FROM tables;
 table_schema |      table_name       |          create_time
--------------+-----------------------+-------------------------------
 public       | customer_dimension    | 2011-08-15 11:18:25.784203-04
 public       | product_dimension     | 2011-08-15 11:18:25.815653-04
 public       | promotion_dimension   | 2011-08-15 11:18:25.850592-04
 public       | date_dimension        | 2011-08-15 11:18:25.892347-04
 public       | vendor_dimension      | 2011-08-15 11:18:25.942805-04
 public       | employee_dimension    | 2011-08-15 11:18:25.966985-04
 public       | shipping_dimension    | 2011-08-15 11:18:25.999394-04
 public       | warehouse_dimension   | 2011-08-15 11:18:26.461297-04
 public       | inventory_fact        | 2011-08-15 11:18:26.513525-04
 store        | store_dimension       | 2011-08-15 11:18:26.657409-04
 store        | store_sales_fact      | 2011-08-15 11:18:26.737535-04
 store        | store_orders_fact     | 2011-08-15 11:18:26.825801-04
 online_sales | online_page_dimension | 2011-08-15 11:18:27.007329-04
 online_sales | call_center_dimension | 2011-08-15 11:18:27.476844-04
 online_sales | online_sales_fact     | 2011-08-15 11:18:27.49749-04
(15 rows)
```

Find out whether certain tables are temporary and flex tables:

```
=> SELECT distinct table_name, table_schema, is_temp_table, is_flextable FROM v_catalog.tables
   WHERE table_name ILIKE 't%';
  table_name  | table_schema | is_temp_table | is_flextable
--------------+--------------+---------------+--------------
 t2_temp      | public       | t             | t
 tt_keys      | public       | f             | f
 t2_temp_keys | public       | f             | f
 t3           | public       | t             | f
 t1           | public       | f             | f
 t9_keys      | public       | f             | f
 t2_keys      | public       | f             | t
 t6           | public       | t             | f
 t5           | public       | f             | f
 t2           | public       | f             | t
 t8           | public       | f             | f
 t7           | public       | t             | f
 tt           | public       | t             | t
 t2_keys_keys | public       | f             | f
 t9           | public       | t             | t
(15 rows)
```

TEXT_INDICES

Provides summary information about the text indices in Vertica.

Column Name	Data Type	Description
INDEX_ID	INTEGER	A unique numeric ID that identifies the index and is assigned by the Vertica catalog.
INDEX_NAME	VARCHAR	The name of the text index.
INDEX_SCHEMA_NAME	VARCHAR	The schema name of the text index.
SOURCE_TABLE_ID	INTEGER	A unique numeric ID that identifies the table and is assigned by the Vertica catalog.
SOURCE_TABLE_NAME	VARCHAR	The name of the source table used to build the index.
SOURCE_TABLE_SCHEMA_NAME	VARCHAR	The schema name of the source table.

TOKENIZER_ID	INTEGER	A unique numeric ID that identifies the tokenizer and is assigned by the Vertica catalog.
TOKENIZER_NAME	VARCHAR	The name of the tokenizer used when building the index.
TOKENIZER_SCHEMA_NAME	VARCHAR	The schema name of the tokenizer.
STEMMER_ID	INTEGER	A unique numeric ID that identifies the stemmer and is assigned by the Vertica catalog.
STEMMER_NAME	VARCHAR	The name of the stemmer used when building the index.
STEMMER_SCHEMA_NAME	VARCHAR	The schema name of the stemmer.
TEXT_COL	VARCHAR	The text column used to build the index.

TYPES

Provides information about supported data types. This table does not include inlined complex types; see COMPLEX_TYPES instead. This table does include arrays and sets of primitive types.

Column Name	Data Type	Description
TYPE_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the specific data type.
ODBC_TYPE	INTEGER	The numerical ODBC type.
ODBC_SUBTYPE	INTEGER	The numerical ODBC subtype, used to differentiate types such as time and interval that have multiple subtypes.
JDBC_TYPE	INTEGER	The numerical JDBC type.
JDBC_SUBTYPE	INTEGER	The numerical JDBC subtype, used to differentiate types such as time and interval that have multiple subtypes.
MIN_SCALE	INTEGER	The minimum number of digits supported to the right of the decimal point for the data type.
MAX_SCALE	INTEGER	The maximum number of digits supported to the right of the decimal point for the data type. A value of 0 is used for types that do not use decimal points.
COLUMN_SIZE	INTEGER	The number of characters required to display the type. See: http://msdn.microsoft.com/en-us/library/windows/desktop/ms711786%28v=VS.85%29.aspx for the details on COLUMN_SIZE for each type.
INTERVAL_MASK	INTEGER	For data types that are intervals, the bitmask to determine the range of the interval from the Vertica TYPE_ID. Details are available in the Vertica SDK.
TYPE_NAME	VARCHAR	The data type name associated with a particular data type ID.
CREATION_PARAMETERS	VARCHAR	A list of keywords, separated by commas, corresponding to each parameter that the application may specify in parentheses when using the name that is returned in the TYPE_NAME field. The keywords in the list can be any of the following: length, precision, or scale. They appear in the order that the syntax requires them to be used.

USER_AUDITS

Lists the results of database and object size audits generated by users calling the AUDIT function. See Monitoring database size for license compliance for more information.

Column Name	Data Type	Description
SIZE_BYTES	INTEGER	The estimated raw data size of the database
USER_ID	INTEGER	The ID of the user who generated the audit
USER_NAME	VARCHAR	The name of the user who generated the audit
OBJECT_ID	INTEGER	The ID of the object being audited
OBJECT_TYPE	VARCHAR	The type of object being audited (table, schema, etc.)
OBJECT_SCHEMA	VARCHAR	The schema containing the object being audited
OBJECT_NAME	VARCHAR	The name of the object being audited
AUDITED_SCHEMA_NAME	VARCHAR	The name of the schema on which you want to query HISTORICAL data. After running audit on a table, you can drop the table. In this case, object_schema becomes NULL.
AUDITED_OBJECT_NAME	VARCHAR	The name of the object on which you want to query HISTORICAL data. After running audit on a table, you can drop the table. In this case, object_name becomes NULL.
LICENSE_NAME	VARCHAR	The name of the license. After running a compliance audit, the value for this column is always vertica .
AUDIT_START_TIMESTAMP	TIMESTAMPTZ	When the audit started
AUDIT_END_TIMESTAMP	TIMESTAMPTZ	When the audit finished
CONFIDENCE_LEVEL_PERCENT	FLOAT	The confidence level of the size estimate
ERROR_TOLERANCE_PERCENT	FLOAT	The error tolerance used for the size estimate
USED_SAMPLING	BOOLEAN	Whether data was randomly sampled (if false, all of the data was analyzed)
CONFIDENCE_INTERVAL_LOWER_BOUND_BYTES	INTEGER	The lower bound of the data size estimate within the confidence level
CONFIDENCE_INTERVAL_UPPER_BOUND_BYTES	INTEGER	The upper bound of the data size estimate within the confidence level
SAMPLE_COUNT	INTEGER	The number of data samples used to generate the estimate
CELL_COUNT	INTEGER	The number of cells in the database

USER_CLIENT_AUTH

Provides information about the client authentication methods that are associated with database users. You associate an authentication method with a user using GRANT (Authentication) .

Column Name	Data Type	Description
USER_OID	INTEGER	A unique identifier for that user.

USER_NAME	VARCHAR	Name of the user.
AUTH_OID	INTEGER	A unique identifier for the authentication method you are using.
AUTH_NAME	VARCHAR	Name that you gave to the authentication method.
GRANTED_TO	BOOLEAN	Name of the user with whom you have associated the authentication method using GRANT (Authentication) .

USER_CONFIGURATION_PARAMETERS

Provides information about user-level configuration parameters that are in effect for database users.

Column Name	Data Type	Description
USER_NAME	VARCHAR	Name of a database user with user-level settings.
PARAMETER_NAME	VARCHAR	The configuration parameter name.
CURRENT_ VALUE	VARCHAR	The parameter's current setting for this user.
DEFAULT_VALUE	VARCHAR	The parameter's default value.

Privileges

Superuser only

Examples

```
=> SELECT * FROM user_configuration_parameters;

USER_FUNCTION_PARAMETERS

Provides information about the parameters of a C++ user-defined function (UDx). You can only view parameters that have the Properties.visible parameter set to TRUE .

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR(128)	The schema to which the function belongs.
FUNCTION_NAME	VARCHAR(128)	The name assigned by the user to the user-defined function.
FUNCTION_TYPE	VARCHAR(128)	The type of user-defined function. For example, 'User Defined Function'.
FUNCTION_ARGUMENT_TYPE	VARCHAR(8192)	The number and data types of input arguments for the function.

PARAMETER_NAME	VARCHAR(128)	The name of the parameter for the user-defined function.
DATA_TYPE	VARCHAR(128)	The data type of the parameter.
DATA_TYPE_ID	INTEGER	A number specifying the ID for the parameter's data type.
DATA_TYPE_LENGTH	INTEGER	The maximum length of the parameter's data type.
IS_REQUIRED	BOOLEAN	Indicates whether the parameter is required or not. If set to TRUE, and you don't provide the parameter, Vertica throws an error.
CAN_BE_NULL	BOOLEAN	Indicates whether the parameter can be passed as a NULL value. If set to FALSE, you pass the parameter with a NULL value, Vertica throws an error.
COMMENT	VARCHAR(128)	A user-supplied description of the parameter.

Privileges

Any user can query the USER_FUNCTION_PARAMETERS table. However, users can only see table information about those UDx functions which the user has permission to use.

See also

- Developing user-defined extensions (UDxs)
- UDx parameters

USER_FUNCTIONS

Returns metadata about user-defined SQL functions (which store commonly used SQL expressions as a function in the Vertica catalog) and user-defined functions.

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR	The name of the schema in which this function exists.
FUNCTION_NAME	VARCHAR	The name assigned by the user to the SQL function or user-defined function.
PROCEDURE_TYPE	VARCHAR	The type of user-defined function. For example, 'User Defined Function'.
FUNCTION_RETURN_TYPE	VARCHAR	The data type name that the SQL function returns.
FUNCTION_ARGUMENT_TYPE	VARCHAR	The number and data types of parameters for the function.
FUNCTION_DEFINITION	VARCHAR	The SQL expression that the user defined in the SQL function's function body.
VOLATILITY	VARCHAR	The SQL function's volatility (whether a function returns the same output given the same input). Can be immutable , volatile , or stable .
IS_STRICT	BOOLEAN	Indicates whether the SQL function is strict , where *t* is true and *f* is false.
IS_FENCED	BOOLEAN	Indicates whether the function runs in Fenced and unfenced modes or not.
COMMENT	VARCHAR	A comment about this function provided by the function creator.

Notes

- The volatility and strictness of a SQL function are automatically inferred from the function definition in order that Vertica determine the correctness of usage, such as where an immutable function is expected but a volatile function is provided.

- The volatility and strictness of a UDx is defined by the UDx's developer.

Examples

Create a SQL function called myzeroifnull in the public schema:

```
=> CREATE FUNCTION myzeroifnull(x INT) RETURN INT
  AS BEGIN
    RETURN (CASE WHEN (x IS NOT NULL) THEN x ELSE 0 END);
  END;
```

Now query the USER_FUNCTIONS table. The query returns just the myzeroifnull macro because it is the only one created in this schema:

```
=> SELECT * FROM user_functions;
-[ RECORD 1 ]----------+-----------------------------------------------------
schema_name            | public
function_name          | myzeroifnull
procedure_type         | User Defined Function
function_return_type   | Integer
function_argument_type | x Integer
function_definition    | RETURN CASE WHEN (x IS NOT NULL) THEN x ELSE 0 END
volatility             | immutable
is_strict              | f
is_fenced              | f
comment                |
```

See also

- CREATE FUNCTION (SQL)
- ALTER FUNCTION (scalar)
- DROP FUNCTION

USER_PROCEDURES

Provides information about stored procedures and external procedures. Users can only view procedures that they can execute.

Column Name	Data Type	Description
PROCEDURE_NAME	VARCHAR	The name of the procedure.
OWNER	VARCHAR	The owner (definer) of the procedure.
LANGUAGE	VARCHAR	The language in which the procedure is defined. For external procedures, this will be EXTERNAL. For stored procedures, this will be one of the supported languages.
SECURITY	VARCHAR	The privileges to use when executing the procedure, one of the following: • DEFINER : Executes the procedure with the privileges of the owner (definer) of the procedure. • INVOKER : Executes the procedure with the privileges of the invoker. For details, see Executing stored procedures.
PROCEDURE_ARGUMENTS	VARCHAR	The arguments of the procedure.
SCHEMA_NAME	VARCHAR	The schema in which the procedure was defined.

Privileges

Non-superusers can only view information on a procedure if they have:

- USAGE privileges on the procedure's schema.

- Ownership or EXECUTE privileges on the procedure.

Examples

```
=> SELECT * FROM user_procedures;
  procedure_name   |  owner  | language | security |                        procedure_arguments                         | schema_name
-------------------+---------+----------+----------+--------------------------------------------------------------------+-------------
 accurate_auc       | dbadmin | PL/vSQL  | INVOKER  | relation varchar, observation_col varchar, probability_col varchar, epsilon float | public
 conditionalTable   | dbadmin | PL/vSQL  | INVOKER  | b boolean                                                          | public
 update_salary      | dbadmin | PL/vSQL  | INVOKER  | x int, y varchar                                                   | public
(3 rows)
```

USER_TRANSFORMS

Lists the currently-defined user-defined transform functions (UDTFs).

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR(128)	The name of the schema containing the UDTF.
FUNCTION_NAME	VARCHAR(128)	The SQL function name assigned by the user.
FUNCTION_RETURN_TYPE	VARCHAR(128)	The data types of the columns the UDTF returns.
FUNCTION_ARGUMENT_TYPE	VARCHAR(8192)	The data types of the columns that make up the input row.
FUNCTION_DEFINITION	VARCHAR(128)	A string containing the name of the factory class for the UDTF, and the name of the library that contains it.
IS_FENCED	BOOLEAN	Whether the UDTF runs in fenced mode.

Privileges

No explicit permissions are required; however, users see only UDTFs contained in schemas to which they have read access.

- Transform functions (UDTFs)
- CREATE TRANSFORM FUNCTION

USERS

Provides information about all users in the database.

> **Tip**
> To see if a role has been assigned to a user, call the function HAS_ROLE .

Column Name	Data Type	Description
USER_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the user.
USER_NAME	VARCHAR	The user name for which information is listed.
IS_SUPER_USER	BOOLEAN	A system flag, where *t* (true) identifies the superuser created at the time of installation. All other users are denoted by *f* (false).
PROFILE_NAME	VARCHAR	The name of the profile to which the user is assigned. The profile controls the user's password policy.
IS_LOCKED	BOOLEAN	Whether the user's account is locked. A locked user cannot log into the system.

LOCK_TIME	TIMESTAMPTZ	When the user's account was locked. Used to determine when to automatically unlock the account, if the user's profile has a PASSWORD_LOCK_TIME parameter set.
RESOURCE_POOL	VARCHAR	The resource pool to which the user is assigned.
MEMORY_CAP_KB	VARCHAR	The maximum amount of memory a query run by the user can consume, in kilobytes.
TEMP_SPACE_CAP_KB	VARCHAR	The maximum amount of temporary disk space a query run by the user can consume, in kilobytes.
RUN_TIME_CAP	VARCHAR	The maximum amount of time any of the user's queries are allowed to run.
MAX_CONNECTIONS	VARCHAR	The maximum number of connections allowed for this user.
CONNECTION_LIMIT_MODE	VARCHAR	Indicates whether the user sets connection limits through the node or in database mode.
IDLE_SESSION_TIMEOUT	VARCHAR	The time the system waits before timing out the user's idle session. Maximum value is 1 year. See Interval subtype units for valid intervals.
GRACE_PERIOD	VARCHAR	Specifies how long a user query can block on any session socket, while awaiting client input or output. If the socket is blocked for a continuous period that exceeds the grace period setting, the server shuts down the socket and throws a fatal error. The session is then terminated.
ALL_ROLES	VARCHAR	Roles assigned to the user. An asterisk in ALL_ROLES output means role granted WITH ADMIN OPTION. See Database Roles.
DEFAULT_ROLES	VARCHAR	Default roles assigned to the user. An asterisk in DEFAULT_ROLES output means role granted WITH ADMIN OPTION. See Enabling roles automatically .
SEARCH_PATH	VARCHAR	Sets the default schema search path for the user. See Setting search paths .
LDAP_DN	VARCHAR	Indicates whether or not the Vertica Analytic Database user maps to an LDAP Link user. When the column is set to dn , the Vertica user maps to LDAP Link..
LDAP_URI_HASH	INTEGER	The URI hash number for the LDAP user.
IS_ORPHANED_FROM_LDAP	BOOLEAN	Indicates if the user is disconnected (orphaned) from LDAP, set to one of the following: • t : User is orphaned • f : User is not orphaned For more information see Troubleshooting LDAP link issues

- HAS_ROLE

VIEW_COLUMNS

Provides view attribute information.

> **Note**
> If you drop a table that is referenced by a view, Vertica does not drop the view. However, attempts to access information about it from VIEW_COLUMNS return an error that the view is invalid.

Column Name	Data Type	Description
TABLE_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog that identifies this view.
TABLE_SCHEMA	VARCHAR	The name of this view's schema.
TABLE_NAME	VARCHAR	The view name.
COLUMN_ID	VARCHAR	A unique VARCHAR ID, assigned by the Vertica catalog, that identifies a column in this view.
COLUMN_NAME	VARCHAR	The name of a column in this view.
DATA_TYPE	VARCHAR	The data type of a view column.
DATA_TYPE_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies a view column's data type.
DATA_TYPE_LENGTH	INTEGER	The data type's maximum length.
CHARACTER_MAXIMUM_LENGTH	INTEGER	The column's maximum length, valid only for character types.
NUMERIC_PRECISION	INTEGER	The column's number of significant decimal digits.
NUMERIC_SCALE	INTEGER	The column's number of fractional digits.
DATETIME_PRECISION	INTEGER	For TIMESTAMP data type, returns the declared precision; returns null if no precision was declared.
INTERVAL_PRECISION	INTEGER	The number of fractional digits retained in the seconds field.
ORDINAL_POSITION	INTEGER	The position of the column relative to other columns in the view.

See also

VIEWS

VIEW_TABLES

Shows details about view-related dependencies, including the table that reference a view, its schema, and owner.

Column Name	Data Type	Description
TABLE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theview.
TABLE_SCHEMA	VARCHAR	Name of the view schema.
TABLE_NAME	VARCHAR	Name of the view.
REFERENCE_TABLE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theview's source table.
REFERENCE_TABLE_SCHEMA	VARCHAR	Name of the view's source table schema.
REFERENCE_TABLE_NAME	VARCHAR	Name of the view's source table.
REFERENCE_TABLE_OWNER_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theview owner.

VIEWS

Provides information about all views within the system. See Views for more information.

Column Name	Data Type	Description
TABLE_SCHEMA_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theview schema.
TABLE_SCHEMA	VARCHAR	The name of the view schema.
TABLE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theview.
TABLE_NAME	VARCHAR	The view name.
OWNER_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theview owner.
OWNER_NAME	VARCHAR	View owner's user name
VIEW_DEFINITION	VARCHAR	The query that defines the view.
IS_SYSTEM_VIEW	BOOLEAN	Indicates whether the view is a system view.
SYSTEM_VIEW_CREATOR	VARCHAR	View creator's user name.
CREATE_TIME	TIMESTAMP	Specifies when this view was created.
IS_LOCAL_TEMP_VIEW	BOOLEAN	Indicates whether this view is a temporary view stored locally.
INHERIT_PRIVILEGES	BOOLEAN	Indicates whether inherited privileges are enabled for this view. For details, see Setting privilege inheritance on tables and views .

ACTIVE_EVENTS

Returns all active events in the cluster. See Monitoring events .

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name where the event occurred.
EVENT_CODE	INTEGER	A numeric ID that indicates the type of event. See Event Types for a list of event type codes.
EVENT_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the specific event.
EVENT_SEVERITY	VARCHAR	The severity of the event from highest to lowest. These events are based on standard syslog severity types. • 0—Emergency • 1—Alert • 2—Critical • 3—Error • 4—Warning • 5—Notice • 6—Informational • 7—Debug

EVENT_POSTED_TIMESTAMP	TIMESTAMP	The year, month, day, and time the event was reported. The time is posted in military time.
EVENT_EXPIRATION	VARCHAR	The year, month, day, and time the event expire. The time is posted in military time. If the cause of the event is still active, the event is posted again.
EVENT_CODE_DESCRIPTION	VARCHAR	A brief description of the event and details pertinent to the specific situation.
EVENT_PROBLEM_DESCRIPTION	VARCHAR	A generic description of the event.
REPORTING_NODE	VARCHAR	The name of the node within the cluster that reported the event.
EVENT_SENT_TO_CHANNELS	VARCHAR	The event logging mechanisms that are configured for Vertica. These can include vertica.log , (configured by default) syslog, and SNMP.
EVENT_POSTED_COUNT	INTEGER	Tracks the number of times an event occurs. Rather than posting the same event multiple times, Vertica posts the event once and then counts the number of additional instances in which the event occurs.

ALLOCATOR_USAGE

Provides real-time information on the allocation and reuse of memory pools for a Vertica node.

There are two memory pools in Vertica, global and SAL. The global memory pool is related to Vertica catalog objects. The SAL memory pool is related to the system storage layer. These memory pools are physical structures from which Vertica allocates and reuses portions of memory.

Within the memory pools, there are two allocation types. Both global and SAL memory pools include chunk and object memory allocation types.

- *Chunk* allocations are from tiered storage, and are grouped into sizes, in bytes, that are powers of 2.
- *Object* allocations are object types, for example, a table or projection. Each object assumes a set size.

The table provides detailed information on these memory pool allocations.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The name of the node from which Vertica has collected this allocator information.
POOL_NAME	VARCHAR	One of two memory pools: • global: Memory pool is related to Vertica catalog objects. • SAL: Memory pool is related to the system storage layer.
ALLOCATION_TYPE	VARCHAR	One of two memory allocation types: • chunk: Chunk allocations are grouped into sizes that are powers of 2. • object: Object allocations assume a set amount of memory based upon the specific object.
UNIT_SIZE	INTEGER	The size, in bytes, of the memory allocation. For example, if the allocation type is a table (an object type), then Vertica allots 8 bytes.
FREE_COUNT	INTEGER	Indicates the count of blocks of freed memory that Vertica has reserved for future memory needs. For example, if you delete a table, Vertica reserves the 8 bytes originally allotted for the table. The 8 bytes freed become 1 unit of memory that Vertica adds to this column.

FREE_BYTES	INTEGER	Indicates the number of freed memory bytes. For example, with a table deletion, Vertica adds 8 bytes to this column. **Note** Vertica does not release memory after originally allocating it, unless the node or database is restarted.
USED_COUNT	INTEGER	Indicates the count of in-use blocks for this allocation. For example, if your database includes two table objects, Vertica adds 2 to this column.
USED_BYTES	INTEGER	The number of bytes of in-use blocks of memory. For example, if your database includes two table objects, each of which assume 8 bytes, Vertica adds 16 to this column.
TOTAL_SIZE	INTEGER	Indicates the number of bytes that is the sum of all free and used memory.
CAPTURE_TIME	TIMESTAMPTZ	Indicates the current timestamp for when Vertica collected the for this table.
ALLOCATION_NAME	VARCHAR	Provides the name of the allocation type. • If the allocation is an object type, provides the name of the object. For example, CAT::Schema . Object types can also have the name internal , meaning that the object is an internal data structure. Those object types that are not internal are prefaced with either CAT or SAL . Those prefaced with CAT indicate memory from the global memory pool. SAL indicates memory from the system storage memory pool. • If the allocation type is chunk, indicates a power of 2 in this field to represent the number of bytes assumed by the chunk. For example, 2^5 .

Sample: how memory pool memory is allotted, retained, and freed

The following table shows sample column values based upon a hypothetical example. The sample illustrates how column values change based upon addition or deletion of a table object.

- When you add a table object (t1), Vertica assumes a UNIT_SIZE of 8 bytes, with a USED_COUNT of 1.
- When you add a second table object (t2), the USED_COUNT increases to 2. Since each object assumes 8 bytes, USED_BYTES increases to 16.
- When you delete one of the two table objects, Vertica USED_COUNT decreases to 1, and USED_BYTES decreases to 8. Since Vertica retains the memory for future use, FREE_BYTES increases to 8, and FREE_COUNT increases to 1.
- Finally, when you create a new table object (t3), Vertica frees the memory for reuse. FREE_COUNT and FREE_BYTES return to 0.

Column Names	Add One Table Object (t1)	Add a Second Table Object (t2)	Delete a Table Object (t2)	Create a New Table Object (t3)
NODE_NAME	v_vmart_node0001	v_vmart_node0001	v_vmart_node0001	v_vmart_node0001
POOL_NAME	global	global	global	global
ALLOCATION_TYPE	object	object	object	object
UNIT_SIZE	8	8	8	8
FREE_COUNT	0	0	1	0

FREE_BYTES	0	0	8	0
USED_COUNT	1	2	1	2
USED_BYTES	8	16	8	16
TOTAL_SIZE	8	16	16	16
CAPTURE_TIME	2017-05-24 13:28:07.83855-04	2017-05-24 14:16:04.480953-04	2017-05-24 14:16:32.077322-04	2017-05-24 14:17:07.320745-04
ALLOCATION_NAME	CAT::Table	CAT::Table	CAT::Table	CAT::Table

Examples

The following example shows one sample record for a chunk allocation type, and one for an object type.

```
=> \x
Expanded display is on.

=> select * from allocator_usage;

allocation_name | SAL::WOSAlloc
.
.
.
```

COLUMN_STORAGE

Returns the amount of disk storage used by each column of each projection on each node.

Column Name	Data Type	Description

NODE_NAME	VARCHAR	The node name for which information is listed.
COLUMN_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thecolumn.
COLUMN_NAME	VARCHAR	The column name for which information is listed.
ROW_COUNT	INTEGER	The number of rows in the column.
USED_BYTES	INTEGER	The disk storage allocation of the column in bytes.
ENCODINGS	VARCHAR	The encoding type for the column.
COMPRESSION	VARCHAR	The compression type for the column. You can compare ENCODINGS and COMPRESSION columns to see how different encoding types affect column storage when optimizing for compression.
ROS_COUNT	INTEGER	The number of ROS containers.
PROJECTION_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the projection.
PROJECTION_NAME	VARCHAR	The associated projection name for the column.
PROJECTION_SCHEMA	VARCHAR	The name of the schema associated with the projection.
ANCHOR_TABLE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theanchor table.
ANCHOR_TABLE_NAME	VARCHAR	The associated table name.
ANCHOR_TABLE_SCHEMA	VARCHAR	The associated table's schema name.
ANCHOR_TABLE_COLUMN_ID	VARCHAR	Catalog-assigned VARCHAR value that uniquely identifies a table column.
ANCHOR_TABLE_COLUMN_NAME	VARCHAR	The name of the anchor table.

COMMUNAL_CLEANUP_RECORDS

Eon Mode only

This system table lists files that Vertica considers leaked on an Eon Mode communal storage. Leaked files are files that are detected as needing deletion but were missed by the normal cleanup mechanisms. This information helps you determine how much space on the communal storage you can reclaim or have reclaimed by cleaning up the leaked files.

Column Name	**Data Type**	**Description**
detection_timestamp	TIMESTAMPTZ	Timestamp at which the file was detected as leaked.
location_path	VARCHAR	The path of communal storage location.
file_name	VARCHAR	The name of the leaked file.
size_in_bytes	INTEGER	The size of the leaked file in bytes.
queued_for_delete	BOOLEAN	Specifies whether the file was queued for deletion. Files queued for deletion might not be deleted right away. Also, a subsequent call to clean_communal_storage reports these files as leaked if the files hadn't already been deleted.

Examples

```
=> SELECT clean_communal_storage('true');
                                                
```

USER_NAME	VARCHAR	Name of the user who changed configuration parameters at the time Vertica recorded the session.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
PARAMETER	VARCHAR	Name of the changed parameter. See Configuration parameters for a detailed list of supported parameters.
VALUE	VARCHAR	New value of the configuration parameter.

Privileges

Superuser

CONFIGURATION_PARAMETERS

Provides information about all configuration parameters that are currently in use by the system.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Node names of the database cluster. ALL indicates that all nodes have the same value.
PARAMETER_NAME	VARCHAR	The parameter name.
CURRENT_VALUE	VARCHAR	The parameter's current setting.
RESTART_VALUE	VARCHAR	The parameter's value after the next restart.
DATABASE_VALUE	VARCHAR	The value that is set at the database level. If no database-level value is set, the value reflects the default value.
DEFAULT_VALUE	VARCHAR	The parameter's default value.
CURRENT_LEVEL	VARCHAR	Level at which CURRENT_VALUE is set, one of the following: • NODE • DATABASE • SESSION • DEFAULT
RESTART_LEVEL	VARCHAR	Level at which the parameter will be set after the next restart, one of the following: • NODE • DATABASE • DEFAULT
IS_MISMATCH	BOOLEAN	Specifies whether CURRENT_VALUE and RESTART_VALUE match.
GROUPS	VARCHAR	A group to which the parameter belongs—for example, OptVOptions. **Note** Most configuration parameters do not belong to any group.

ALLOWED_LEVELS	VARCHAR	Indicates levels at which the specified parameter can be set, one of the following: • DATABASE • NODE • SESSION • USER
SUPERUSER_ONLY	BOOLEAN	Specifies whether non-superusers can view all parameter settings. If set to true, the following columns are masked to non-superusers: • CURRENT_VALUE • RESTART_VALUE • DATABASE_VALUE • DEFAULT_VALUE
CHANGE_UNDER_SUPPORT_GUIDANCE	BOOLEAN	Specifies whether the parameter is intended for use only under guidance from Vertica technical support.
CHANGE_REQUIRES_RESTART	BOOLEAN	Specifies whether the configuration change requires a restart.
DESCRIPTION	VARCHAR	Describes the parameter's usage.

Examples

The following example shows a case where the parameter requires a restart for the new setting to take effect:

```
=> SELECT * FROM CONFIGURATION_PARAMETERS WHERE parameter_name = 'RequireFIPS';
-[ RECORD 1 ]----------------+--------------------
node_name                    | ALL
parameter_name               | RequireFIPS
current_value                | 0
restart_value                | 0
database_value               | 0
default_value                | 0

See also

Configuration parameters

CPU_USAGE

Records CPU usage history on the system.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
START_TIME	TIMESTAMP	Beginning of history interval.
END_TIME	TIMESTAMP	End of history interval.
AVERAGE_CPU_USAGE_PERCENT	FLOAT	Average CPU usage in percent of total CPU time (0-100) during history interval.

Privileges

Superuser

CRITICAL_HOSTS

Lists the critical hosts whose failure would cause the database to become unsafe and force a shutdown.

Column Name	Data Type	Description
HOST_NAME	VARCHAR	Name of a critical host

Privileges

None

CRITICAL_NODES

Lists the critical nodes whose failure would cause the database to become unsafe and force a shutdown.

Column Name	Data Type	Description
NODE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thenode.
NODE_NAME	VARCHAR	Name of a critical node.

CRITICAL_SUBCLUSTERS

Lists the primary subclusters whose loss would cause the database to become unsafe and force it to shutdown. Vertica checks this table before stopping a subcluster to ensure it will not trigger a database shutdown. If you attempt to stop or remove a subcluster in this table, Vertica returns an error message. See Starting and stopping subclusters for more information.

This table only has contents when the database is in Eon Mode and when one or more subclusters are critical.

Column Name	Data Type	Description
SUBCLUSTER_OID	INTEGER	Unique identifier for the subcluster.
SUBCLUSTER_NAME	VARCHAR	The name of the subcluster in a critical state.

Examples

```
=> SELECT * FROM critical_subclusters;
 subcluster_oid   |  subcluster_name
------------------+--------------------
 45035996273704996 | default_subcluster
(1 row)
```

CURRENT_SESSION

Returns information about the current active session. Use this table to find out the current session's sessionID and get the duration of the previously-run query.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node for which information is listed
USER_NAME	VARCHAR	Name used to log into the database, NULL if the session is internal
CLIENT_HOSTNAME	VARCHAR	Host name and port of the TCP socket from which the client connection was made, NULL if the session is internal

<table>
<tr><td>TYPE</td><td>INTEGER</td><td>Identifies the session type, one of the following integer values:<table>
<tr><td>1</td><td>Client</td><td>8</td><td>Shutdown</td></tr>
<tr><td>2</td><td>DBD</td><td>9</td><td>License audit</td></tr>
<tr><td>3</td><td>Merge out</td><td>10</td><td>Timer service</td></tr>
<tr><td>4</td><td>Move out</td><td>11</td><td>Connection</td></tr>
<tr><td>5</td><td>Rebalance cluster</td><td>12</td><td>VSpread</td></tr>
<tr><td>6</td><td>Recovery</td><td>13</td><td>Sub-session</td></tr>
<tr><td>7</td><td>Refresh</td><td>14</td><td>Repartition table</td></tr>
</table></td></tr>
<tr><td>CLIENT_PID</td><td>INTEGER</td><td>Process identifier of the client process that issued this connection. This process might be on a different machine than the server.</td></tr>
<tr><td>LOGIN_TIMESTAMP</td><td>TIMESTAMP</td><td>When the user logged into the database or the internal session was created. This column can help identify open sessions that are idle.</td></tr>
<tr><td>SESSION_ID</td><td>VARCHAR</td><td>Identifier required to close or interrupt a session. This identifier is unique within the cluster at any point in time, but can be reused when the session closes.</td></tr>
<tr><td>CLIENT_LABEL</td><td>VARCHAR</td><td>User-specified label for the client connection that can be set when using ODBC. See Label in Data source name (DSN) connection properties .</td></tr>
<tr><td>TRANSACTION_START</td><td>TIMESTAMP</td><td>When the current transaction started, NULL if no transaction is running</td></tr>
<tr><td>TRANSACTION_ID</td><td>VARCHAR</td><td>Hexadecimal identifier of the current transaction, NULL if no transaction is in progress</td></tr>
<tr><td>TRANSACTION_DESCRIPTION</td><td>VARCHAR</td><td>Description of the current transaction</td></tr>
<tr><td>STATEMENT_START</td><td>TIMESTAMP</td><td>When the current statement started execution, NULL if no statement is running</td></tr>
<tr><td>STATEMENT_ID</td><td>VARCHAR</td><td>Unique numeric ID for the currently-running statement, NULL if no statement is being processed. Combined, TRANSACTION_ID and STATEMENT_ID uniquely identify a statement within a session.</td></tr>
<tr><td>LAST_STATEMENT_DURATION_US</td><td>INTEGER</td><td>Duration in microseconds of the last completed statement</td></tr>
<tr><td>CURRENT_STATEMENT</td><td>VARCHAR</td><td>The currently-running statement, if any. NULL indicates that no statement is currently being processed.</td></tr>
<tr><td>LAST_STATEMENT</td><td>VARCHAR</td><td>NULL if the user has just logged in, otherwise the currently running statement or most recently completed statement.</td></tr>
<tr><td>EXECUTION_ENGINE_PROFILING_CONFIGURATION</td><td>VARCHAR</td><td>See Profiling Settings below.</td></tr>
<tr><td>QUERY_PROFILING_CONFIGURATION</td><td>VARCHAR</td><td>See Profiling Settings below.</td></tr>
</table>

SESSION_PROFILING_CONFIGURATION	VARCHAR	See Profiling Settings below.
CLIENT_TYPE	VARCHAR	Type of client from which the connection was made, one of the following: • ADO.NET Driver • ODBC Driver • JDBC Driver • vsql
CLIENT_VERSION	VARCHAR	Client version
CLIENT_OS	VARCHAR	Client operating system
CLIENT_OS_USER_NAME	VARCHAR	Identifies the user that logged into the database, also set for unsuccessful login attempts.
REQUESTED_PROTOCOL	VARCHAR	Communication protocol version that the ODBC client driver sends to Vertica server, used to support backward compatibility with earlier server versions.
EFFECTIVE_PROTOCOL	VARCHAR	Minimum protocol version supported by client and driver.

Profiling settings

The following columns show settings for different profiling categories:

- EXECUTION_ENGINE_PROFILING_CONFIGURATION
- QUERY_PROFILING_CONFIGURATION
- SESSION_PROFILING_CONFIGURATION

These are set to one of the following:

Empty	No profiling is set
Session	On for current session
Global	On by default for all sessions
Session, Global	On by default for all sessions, including current session.

For information about controlling profiling settings, see Enabling profiling .

DATA_COLLECTOR

Shows settings for all Data collector components: their current retention policy properties and other data collection statistics.

Data Collector is on by default. To turn it off, set configuration parameter EnableDataCollector to 0.

Column Name	**Data Type**	**Description**
NODE_NAME	VARCHAR	Node name on which data is stored.
COMPONENT	VARCHAR	Name of the component.
TABLE_NAME	VARCHAR	The data collector table name for which information is listed.
DESCRIPTION	VARCHAR	Short description about the component.
ACCESS_RESTRICTED	BOOLEAN	Indicates whether access to the table is restricted to the DBADMIN, PSEUDOSUPERUSER, or SYSMONITOR roles.

MEMORY_BUFFER_SIZE_KB	INTEGER	Specifies in kilobytes the maximum amount of data that is buffered in memory before moving it to disk. You can modify this value with SET_DATA_COLLECTOR_POLICY .
DISK_SIZE_KB	INTEGER	Specifies in kilobytes the maximum disk space allocated for this component's Data Collector table. If set to 0, the Data Collector retains only as much component data as it can buffer in memory, as specified by MEMORY_BUFFER_SIZE_KB. You can modify this value with SET_DATA_COLLECTOR_POLICY .
INTERVAL_SET	BOOLEAN	Boolean, specifies whether time-based retention is enabled (INTERVAL_TIME is ≥ 0).
INTERVAL_TIME	INTERVAL	INTERVAL data type that specifies how long data of a given component is retained in that component's Data Collector table. You can modify this value with SET_DATA_COLLECTOR_POLICY or SET_DATA_COLLECTOR_TIME_POLICY . For example, if you specify component TupleMoverEvents and set interval-time to an interval of two days ('2 days'::interval), the Data Collector table dc_tuple_mover_events retains records of Tuple Mover activity over the last 48 hours. Older Tuple Mover data are automatically dropped from this table. **Note** Setting a component's policy's interval_time property has no effect on how much data storage the Data Collector retains on disk for that component. Maximum disk storage capacity is determined by the disk_size_kb property. Setting the interval_time property only affects how long data is retained by the component's Data Collector table. For details, see Configuring data retention policies .
RECORD_TOO_BIG_ERRORS	INTEGER	Integer that increments by one each time an error is thrown because data did not fit in memory (based on the data collector retention policy).
LOST_BUFFERS	INTEGER	Number of buffers lost.
LOST_RECORDS	INTEGER	Number of records lost.
RETIRED_FILES	INTEGER	Number of retired files.
RETIRED_RECORDS	INTEGER	Number of retired records.
CURRENT_MEMORY_RECORDS	INTEGER	The current number of rows in memory.
CURRENT_DISK_RECORDS	INTEGER	The current number of rows stored on disk.
CURRENT_MEMORY_BYTES	INTEGER	Total current memory used in kilobytes.
CURRENT_DISK_BYTES	INTEGER	Total current disk space used in kilobytes.
FIRST_TIME	TIMESTAMP	Timestamp of the first record.
LAST_TIME	TIMESTAMP	Timestamp of the last record
KB_PER_DAY	FLOAT	Total kilobytes used per day.

Examples

Get the current status of resource pools:

```
=> SELECT * FROM data_collector WHERE component = 'ResourcePoolStatus' ORDER BY node_name;
-[ RECORD 1 ]----------+---------------------------------
node_name              | v_vmart_node0001
component              | ResourcePoolStatus
```

DATA_READS

Eon Mode only

Lists each storage location that a query reads in Eon Mode. If the query fetches data from multiple locations, this table provides a row for each location per node that read data. For example, a query might run on three nodes and fetch data from the depot and communal storage. In this case, the table displays six rows for the query: three rows for each node's depot read, and three for each node's communal storage read.

> **Note**
> This table is only populated in Eon Mode.

Column Name	Column Type	Description
START_TIME	TIMESTAMP	When Vertica started reading data from the location.
NODE_NAME	VARCHAR	Name of the node that fetched the data
SESSION_ID	VARCHAR	Unique numeric ID assigned by the Vertica catalog, which identifies the session for which profiling information is captured. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
USER_ID	INT	Unique numeric ID assigned by the Vertica catalog, which identifies the user.
USER_NAME	VARCHAR	Name of the user running the query.
TRANSACTION_ID	INT	Identifier for the transaction within the session, if any. If a session is active but no transaction has begun, TRANSACTION_ID returns NULL.
STATEMENT_ID	INT	Unique numeric ID for the statement that Set Snippet Variable Value in Topic. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID and STATEMENT_ID uniquely identifies a statement within a session; these columns are useful for creating joins with other system tables.
REQUEST_ID	INT	ID of the data request.
LOCATION_ID	INT	ID of the storage location read.
LOCATION_PATH	VARCHAR	Path of the storage container read by the query.
BYTES_READ	INT	Number of bytes read by the query from this location.

Examples

```
=> SELECT * FROM V_MONITOR.DATA_READS WHERE TRANSACTION_ID = 45035996273707457;

```

DATABASE_BACKUPS

Lists historical information for each backup that successfully completed after running the vbr utility. This information is useful for determining whether to create a new backup before you advance the AHM . Because this system table displays historical information, its contents do not always reflect the current state of a backup repository. For example, if you delete a backup from a repository, the DATABASE_BACKUPS system table continues to display information about it.

To list existing backups, run vbr as described in Viewing backups .

Column Name	Data Type	Description
BACKUP_TIMESTAMP	TIMESTAMP	The timestamp of the backup.
NODE_NAME	VARCHAR	The name of the initiator node that performed the backup.
SNAPSHOT_NAME	VARCHAR	The name of the backup, as specified in the snapshotName parameter of the vbr configuration file.
BACKUP_EPOCH	INTEGER	The database epoch at which the backup was saved.
NODE_COUNT	INTEGER	The number of nodes backed up in the completed backup, and as listed in the [Mapping *n*] sections of the configuration file.

OBJECTS	VARCHAR	The name of the object(s) contained in an object-level backup. This column is empty if the record is for a full cluster backup.
FILE_SYSTEM_TYPE	VARCHAR	The type of file system, such as Linux.

Privileges

Superuser

DATABASE_CONNECTIONS

Lists the connections to other databases for importing and exporting data. See Moving Data Between Vertica Databases .

Column Name	Data Type	Description
DATABASE	VARCHAR	The name of the connected database
USERNAME	VARCHAR	The username used to create the connection
HOST	VARCHAR	The host name used to create the connection
PORT	VARCHAR	The port number used to create the connection
ISVALID	BOOLEAN	Whether the connection is still open and usable or not

Examples

```
=> CONNECT TO VERTICA vmart USER dbadmin PASSWORD '' ON '10.10.20.150',5433;
CONNECT
=> SELECT * FROM DATABASE_CONNECTIONS;
 database | username |     host     | port | isvalid
----------+----------+--------------+------+---------
 vmart    | dbadmin  | 10.10.20.150 | 5433 | t
(1 row)
```

DATABASE_MIGRATION_STATUS

Provides real-time and historical data on Enterprise-to-Eon database migration attempts.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of a node in the source Enterprise database.
TRANSACTION_ID	VARCHAR	Hexadecimal identifier of the migration process transaction.
PHASE	VARCHAR	A stage of database migration on a given node, one of the following, listed in order of execution: • Catalog Conversion: Conversion of enterprise-mode catalog to Eon-compatible catalog. **Note** No data is transferred during this phase, so BYTES_TO_TRANSFER and BYTES_TRANSFERED are always set to 0. • Data Transfer: Transfer of data files and library files to communal storage • Catalog Transfer: Includes transfer of checkpoint and transaction log files.

STATUS	VARCHAR	Specifies status of a given phase, one of the following: • RUNNING • COMPLETED • ABORT ABORT indicates a given migration phase was unable to complete—for example, the client disconnected, or a network outage occurred—and the migration returned with an error. In this case, call MIGRATE_ENTERPRISE_TO_EON again to restart migration. For details, see Handling Interrupted Migration .
BYTES_TO_TRANSFER	INTEGER	For each migration phase, the size of data to transfer to communal storage, set when phase status is RUNNING: • Catalog Conversion: 0 • Data Transfer: Size of data files and library files • Catalog Transfer: Size of transaction logs
BYTES_TRANSFERRED	INTEGER	For each migration phase, the size of data transfered to communal storage. This value is updated while phase status is RUNNING, and set to the total number of bytes transferred when status is COMPLETED: • Catalog Conversion: 0 • Data Transfer: Size of data files and library files • Catalog Transfer: Size of transaction logs
COMMUNAL_STORAGE_LOCATION	VARCHAR	URL of targeted communal storage location
START_TIME	TIMESTAMP	Demarcate the start and end of each PHASE-specified migration operation.
END_TIME		

Privileges

Superuser

Examples

The following example shows data of a migration that is in progress:

```
=> SELECT node_name, phase, status, bytes_to_transfer, bytes_transferred, communal_storage_location FROM database_migration_status ORDER BY
node_name, start_time;
    node_name    |       phase        |  status   | bytes_to_transfer | bytes_transferred | communal_storage_location
-----------------+--------------------+-----------+-------------------+-------------------+--------------------------
 v_vmart_node0001 | Catalog Conversion | COMPLETED |                 0 |                 0 | s3://verticadbbucket/
 v_vmart_node0001 | Data Transfer      | COMPLETED |              1134 |              1134 | s3://verticadbbucket/
 v_vmart_node0001 | Catalog Transfer   | COMPLETED |              3765 |              3765 | s3://verticadbbucket/
 v_vmart_node0002 | Catalog Conversion | COMPLETED |                 0 |                 0 | s3://verticadbbucket/
 v_vmart_node0002 | Data Transfer      | COMPLETED |              1140 |              1140 | s3://verticadbbucket/
 v_vmart_node0002 | Catalog Transfer   | COMPLETED |              3766 |              3766 | s3://verticadbbucket/
 v_vmart_node0003 | Catalog Conversion | COMPLETED |                 0 |                 0 | s3://verticadbbucket/
 v_vmart_node0003 | Data Transfer      | RUNNING   |           5272616 |            183955 | s3://verticadbbucket/
```

DELETE_VECTORS

Holds information on deleted rows to speed up the delete process.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The name of the node storing the deleted rows.

SCHEMA_NAME	VARCHAR	The name of the schema where the deleted rows are located.
PROJECTION_NAME	VARCHAR	The name of the projection where the deleted rows are located.
DV_OID	INTEGER	The unique numeric ID (OID) that identifies this delete vector.
STORAGE_OID	INTEGER	The unique numeric ID (OID) that identifies the storage container that holds the delete vector.
SAL_STORAGE_ID	VARCHAR	Unique hexadecimal numeric ID assigned by the Vertica catalog, which identifies the storage.
DELETED_ROW_COUNT	INTEGER	The number of rows deleted.
USED_BYTES	INTEGER	The number of bytes used to store the deletion.
START_EPOCH	INTEGER	The start epoch of the data in the delete vector.
END_EPOCH	INTEGER	The end epoch of the data in the delete vector.

Examples

After you delete data from a Vertica table, that data is marked for deletion. To see the data that is marked for deletion, query the DELETE_VECTORS system table.

Run PURGE to remove the delete vectors from ROS containers.

```
=> SELECT * FROM test1;
 number
--------
     3
    12
    33
    87
    43
    99
(6 rows)
=> DELETE FROM test1 WHERE number > 50;
 OUTPUT
--------
     2
(1 row)
=> SELECT * FROM test1;
 number
--------
    43
     3
    12
    33
(4 rows)
=> SELECT node_name, projection_name, deleted_row_count FROM DELETE_VECTORS;
    node_name     | projection_name | deleted_row_count
------------------+-----------------+-------------------
 v_vmart_node0002 | test1_b1        |                 1
 v_vmart_node0001 | test1_b1        |                 1
 v_vmart_node0001 | test1_b0        |                 1
 v_vmart_node0003 | test1_b0        |                 1
(4 rows)
=> SELECT PURGE();
...
(Table: public.test1) (Projection: public.test1_b0)
(Table: public.test1) (Projection: public.test1_b1)
...
(4 rows)
```

After the ancient history mark (AHM) advances:

```
=> SELECT * FROM DELETE_VECTORS;
 (No rows)
```

DEPLOY_STATUS

Records the history of deployed Database Designer designs and their deployment steps.

Column Name	Data Type	Description
EVENT_TIME	TIMESTAMP	Time when the row recorded the event.
USER_NAME	VARCHAR	Name of the user who deployed a design at the time Vertica recorded the session.
DEPLOY_NAME	VARCHAR	Name the deployment, same as the user-specified design name.

DEPLOY_STEP	VARCHAR	Steps in the design deployment.
DEPLOY_STEP_STATUS	VARCHAR	Textual status description of the current step in the deploy process.
DEPLOY_STEP_COMPLETE_PERCENT	FLOAT	Progress of current step in percentage (0–100).
DEPLOY_COMPLETE_PERCENT	FLOAT	Progress of overall deployment in percentage (0–100).
ERROR_MESSAGE	VARCHAR	Error or warning message during deployment.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

DEPLOYMENT_PROJECTION_STATEMENTS

Contains information about CREATE PROJECTION statements used to deploy a database design. Each row contains information about a different CREATE PROJECTION statement. The function DESIGNER_RUN_POPULATE_DESIGN_AND_DEPLOY populates this table.

Column Name	Column Type	Description
DEPLOYMENT_ID	INTEGER	Unique ID that Database Designer assigned to the deployment.
DESIGN_NAME	VARCHAR	Unique name that the user assigned to the design.
DEPLOYMENT_PROJECTION_ID	INTEGER	Unique ID assigned to the output projection by Database Designer.
STATEMENT_ID	INTEGER	Unique ID assigned to the statement type that creates the projection.
STATEMENT	VARCHAR	Text for the statement that creates the projection.

DEPLOYMENT_PROJECTIONS

Contains information about projections created and dropped during the design. Each row contains information about a different projection. Database Designer populates this table after the design is deployed.

Column Name	Column Type	Description
deployment_id	INTEGER	Unique ID that Database Designer assigned to the deployment.
deployment_projection_id	INTEGER	Unique ID that Database Designer assigned to the output projection.
design_name	VARCHAR	Name of the design being deployed.
deployment_projection_name	VARCHAR	Name that Database Designer assigned to the projection.
anchor_table_schema	VARCHAR	Name of the schema that contains the table the projection is based on.
anchor_table_name	VARCHAR	Name of the table the projection is based on.
deployment_operation	VARCHAR	Action being taken on the projection, for example, add or drop.

deployment_projection_type	VARCHAR	Indicates whether Database Designer has proposed new projections for this design (DBD) or is using the existing catalog design (CATALOG). The REENCODED suffix indicates that the projection sort order and segmentation are the same, but the projection columns have new encodings: • DBD • CATALOG • DBD_REENCODED • CATALOG_REENCODED
deploy_weight	INTEGER	Weight of this projection in creating the design. This field is always 0 for projections that have been dropped.
estimated_size_on_disk	INTEGER	Approximate size of the projection on disk, in MB.

DEPOT_EVICTIONS

Eon Mode only

Records data on eviction of objects from the depot.

Column Name	Data Type	Description
START_TIME	TIMESTAMP	Demarcate the start and end of each depot eviction operation.
END_TIME		
NODE_NAME	VARCHAR	Name of a node where the eviction occurred.
SESSION_ID	VARCHAR	Unique numeric ID assigned by the Vertica catalog, which identifies the session for which profiling information is captured. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
USER_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the user.
USER_NAME	VARCHAR	The user who made changes to the depot.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any. If a session is active but no transaction has begun, TRANSACTION_ID returns NULL.
STATEMENT_ID	INTEGER	Unique numeric ID for the statement that Set Snippet Variable Value in Topic. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID and STATEMENT_ID uniquely identifies a statement within a session; these columns are useful for creating joins with other system tables.
REQUEST_ID	INTEGER	Unique identifier of the query request in the user session.
STORAGE_ID	VARCHAR	Unique hexadecimal numeric ID assigned by the Vertica catalog, which identifies the storage.
STORAGE_OID	INTEGER	Numeric ID assigned by the Vertica catalog, which identifies the storage.
FILE_SIZE_BYTES	INTEGER	The size of the file in bytes that was evicted.
NUMBER_HITS	INTEGER	The number of times the file was accessed.
LAST_ACCESS_TIME	TIMESTAMP	The last time the file was read.

REASON	VARCHAR	The reason the file was evicted, one of the following: • DROP SUBSCRIPTION • CLEAR DEPOT • EVICTION DUE TO NEW • DROP OBJECT • LOAD • QUERY • PEER TO PEER FILL • DEPOT FILL AT STARTUP • DEPOT SIZE CHANGE
IS_PINNED	BOOLEAN	Specifies whether the file is pinned to this depot.

Examples

```
=> SELECT * FROM V_MONITOR.DEPOT_EVICTIONS LIMIT 2;
-[ RECORD 1 ]----+--------------------------------------------------
start_time       | 2019-02-20 15:32:26.765937+00

```

DEPOT_FETCH_QUEUE

Eon Mode only

Lists all pending depot requests for queried file data to fetch from communal storage.

Column Name	Data Type	Description

NODE_NAME	VARCHAR	Name of the node that requested the fetch.
SAL_STORAGE_ID	VARCHAR	Unique hexadecimal numeric ID assigned by the Vertica catalog, which identifies the storage.
TRANSACTION_ID	INTEGER	Identifies the transaction that contains the fetch-triggering query.
SOURCE_FILE_NAME	VARCHAR	Full path in communal storage of the file to fetch.
DESTINATION_FILE_NAME	VARCHAR	Destination path of the file to fetch.

Examples

```
=> \x
Expanded display is on.
=> SELECT * FROM depot_fetch_queue;
-[ RECORD 1 ]----------+-----------------------------------------------------------------
node_name              | v_example_db_node0002

```

DEPOT_FETCHES

Eon Mode only

Records data of depot fetch requests.

> **Note**
> Vertica reports all fetches to this table, including failed fetch attempts and their causes.

Column Name	Data Type	Description
START_TIME	TIMESTAMP	Demarcate the start and end of each depot fetch operation.
END_TIME		
NODE_NAME	VARCHAR	Identifies the node that initiated fetch request.
TRANSACTION_ID	INTEGER	Uniquely identifies the transaction of the query that required the fetched file.
STORAGE_ID	VARCHAR	Unique hexadecimal numeric ID assigned by the Vertica catalog, to identify the storage.
STORAGE_OID	INTEGER	Numeric ID assigned by the Vertica catalog, which identifies the storage.
FILE_SIZE_BYTES	INTEGER	Fetch size in bytes.
SOURCE_FILE	VARCHAR	Source file path used, set to null if the file was fetched from a peer.

DESTINATION_FILE	VARCHAR	Destination file path
SOURCE_NODE	VARCHAR	Source node from which the file was fetched, set to one of the following: • Name of the source node if file was fetched from a peer • Null if file was fetched from communal storage
IS_SUCCESSFUL	BOOLEAN	Boolean, specifies whether this fetch succeeded.
REASON	VARCHAR	Reason why the fetch failed, null if IS_SUCCESSFUL is true.

Examples

```
=> \x
Expanded display is on.

=> SELECT * FROM DEPOT_FETCHES LIMIT 2;

DEPOT_FILES

Eon Mode only

Lists all objects contained in all database depots.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The name of the node this file is on.
SAL_STORAGE_ID	VARCHAR	Unique hexadecimal numeric ID assigned by the Vertica catalog, which identifies the storage.
STORAGE_OID	INTEGER	Numeric ID assigned by the Vertica catalog, which identifies the storage.
COMMUNAL_FILE_PATH	VARCHAR	The path to the original file in communal storage. On AWS, this is an S3 URI.
DEPOT_FILE_PATH	VARCHAR	The path to the file in the depot.
SHARD_NAME	VARCHAR	The name of the shard this file is a part of.
STORAGE_TYPE	VARCHAR	The type of system storing this file.
NUMBER_OF_ACCESSES	INTEGER	The number of times this file has been accessed.
FILE_SIZE_BYTES	INTEGER	How large the file is in bytes.
LAST_ACCESS_TIME	TIMESTAMPTZ	A timestamp of when the file was last accessed.
ARRIVAL_TIME	TIMESTAMPTZ	When Vertica loaded the file into the depot.
SOURCE	VARCHAR	Where the file came from. One of the following: • LOAD • QUERY • PEER TO PEER FILL • DEPOT FILL AT STARTUP
IS_PINNED	BOOLEAN	Specifies whether the file is pinned to this depot.

Examples

```
=> \x
Expanded display is on.
=> SELECT * FROM depot_files LIMIT 2;

DEPOT_PIN_POLICIES

Eon Mode only

Lists all objects —tables, projections, and table partitions—that are pinned to database depots.

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR	Schema of the pinned object.
OBJECT_NAME	VARCHAR	Name of the pinned object.
POLICY_DETAILS	VARCHAR	Specifies the object type, one of the following: • Table • Projection • Partition
MIN_VAL	VARCHAR	If the pinned object is one or more contiguous table partitions, specifies the range of partition keys.
MAX_VAL		
LOCATION_LABEL		The depot's storage location label.

- SET_DEPOT_PIN_POLICY_PROJECTION
- SET_DEPOT_PIN_POLICY_TABLE
- Managing depot caching

DEPOT_SIZES

Eon Mode only

Reports depot caching capacity on Vertica nodes.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The name of the node containing the depot.
LOCATION_OID	INTEGER	Catalog-assigned integer value that uniquely identifies the storage location storing the depot.
LOCATION_PATH	VARCHAR	The path where the depot is stored.
LOCATION_LABEL	VARCHAR	The label associated with the depot's storage location.
MAX_SIZE_BYTES	INTEGER	The maximum size the depot can contain, in bytes.
CURRENT_USAGE_BYTES	INTEGER	The current size of the depot, in bytes.

Examples

```
=> \x
Expanded display is on.
=> SELECT * FROM Depot_Sizes;

-[ RECORD 1 ]-------+----------------------------------------------------

node_name           | v_verticadb_node0003

location_path       | /vertica/data/verticadb/v_verticadb_node0003_depot
location_label      | auto-data-depot
max_size_bytes      | 0
current_usage_bytes | 0

-[ RECORD 2 ]-------+----------------------------------------------------
node_name           | v_verticadb_node0001
location_oid        | 45035996273823196
location_path       | /vertica/data/verticadb/v_verticadb_node0001_depot
location_label      | auto-data-depot
max_size_bytes      | 33686316032
current_usage_bytes | 206801871

-[ RECORD 3 ]-------+----------------------------------------------------
node_name           | v_verticadb_node0002
location_oid        | 45035996273823198
location_path       | /vertica/data/verticadb/v_verticadb_node0002_depot
location_label      | auto-data-depot
max_size_bytes      | 0
current_usage_bytes | 0
```

DEPOT_UPLOADS

Eon Mode only

Lists details about depot uploads to communal storage.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The name of the node on which the depot resides.
PLAN_ID	VARCHAR	A unique node-specific numeric ID for each plan run by the Optimizer.
SUBMIT_TIME	TIMESTAMP	The time the task was submitted to the uploader.
START_TIME	TIMESTAMP	The time the upload started.
END_TIME	TIMESTAMP	The time the upload ended.
SOURCE_FILE	VARCHAR	The source file path used.
DESTINATION_FILE	VARCHAR	The destination file path.
FILE_SIZE_BYTES	INTEGER	The size of the uploaded file, in bytes.
MEMORY_USED_KB	INTEGER	The size of the uploader file buffer for the task. Valid for a task with a RUNNING or COMPLETED status. For a RUNNING status, this shows the current file buffer size, (whatever the uploader is using, which may grow over time for large uploads). For a COMPLETED status, this shows the largest size used in case the buffer grew during the upload.
STATUS	VARCHAR	The status of the task, valid values are: COMPLETED - the task has completed QUEUED - the task is still in the queue, but haven't been picked up by the uploader. RUNNING - the task is currently running and the corresponding file is uploading.

DESIGN_QUERIES

Contains info about design queries for a given design. The following functions populate this table:

- DESIGNER_ADD_DESIGN_QUERIES
- DESIGNER_ADD_DESIGN_QUERIES_FROM_RESULTS
- DESIGNER_ADD_DESIGN_QUERY

Column Name	Column Type	Description
DESIGN_ID	INTEGER	Unique id that Database Designer assigned to the design.
DESIGN_NAME	VARCHAR	Name that you specified for the design.
DESIGN_QUERY_ID	INTEGER	Unique id that Database Designer assigned to the design query.
DESIGN_QUERY_ID_INDEX	INTEGER	Database Designer chunks the query text if it exceeds the maximum attribute size before storing it in this table. Database Designer stored all chunks stored under the same value of DESIGN_QUERY_ID. DESIGN_QUERY_ID_INDEX keeps track of the order of the chunks, starting with 0 and ending in n, the index of the final chunk.
QUERY_TEXT	VARCHAR	Text of the query chunk, or the entire query text if it does not exceed the maximum attribute size.

WEIGHT	FLOAT	A value from 0 to 1 that indicates the importance of that query in creating the design. Assign a higher weight to queries that you run frequently so that Database Designer prioritizes those queries in creating the design. Default: 1.
DESIGN_QUERY_SEARCH_PATH	VARCHAR	The search path with which the query is to be parsed.
DESIGN_QUERY_SIGNATURE	INTEGER	Categorizes queries that affect the design that Database Designer creates in the same way. Database Designer assigns a signature to each query, weights one query for each signature group, depending on how many queries there are with that signature, and Database Designer considers that query when creating the design.

Example

Add queries to VMART_DESIGN and query the DESIGN_QUERIES table:

```
=> SELECT DESIGNER_ADD_DESIGN_QUERIES('VMART_DESIGN', '/tmp/examples/vmart_queries.sql','true');
 DESIGNER_ADD_DESIGN_QUERIES
-----------------------------
Number of accepted queries                    =9
Number of queries referencing non-design tables =0
Number of unsupported queries                 =0
Number of illegal queries                     =0
=> \x
Expanded display is on.
=> SELECT * FROM V_MONITOR.DESIGN.QUERIES
-[ RECORD 1 ]------------+-------------------

-[ RECORD 3]-------------+-------------------
...
```

DESIGN_STATUS

Records the progress of a running Database Designer design or history of the last Database Designer design executed by the current user.

Column Name	Data Type	Description
EVENT_TIME	TIMESTAMP	Time when the row recorded the event.
USER_NAME	VARCHAR	Name of the user who ran a design at the time Vertica recorded the session.
DESIGN_NAME	VARCHAR	Name of the user-specified design.

DESIGN_PHASE	VARCHAR	Phase of the design.
PHASE_STEP	VARCHAR	Substep in each design phase
PHASE_STEP_COMPLETE_PERCENT	FLOAT	Progress of current substep in percentage (0–100).
PHASE_COMPLETE_PERCENT	FLOAT	Progress of current design phase in percentage (0–100).

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

Examples

The following example shows the content of the DESIGN_STATUS table of a complete Database Designer run:

```
=> SELECT event_time, design_name, design_phase, phase_complete_percent
   FROM v_monitor.design_status;
event_time          | design_name | design_phase                                | phase_complete_percent
--------------------+-------------+---------------------------------------------+-----------------------
2012-02-14 10:31:20 | design1     | Design started                              |
2012-02-14 10:31:21 | design1     | Design in progress: Analyze statistics phase   |
2012-02-14 10:31:21 | design1     | Analyzing data statistics                   | 33.33
2012-02-14 10:31:22 | design1     | Analyzing data statistics                   | 66.67
2012-02-14 10:31:24 | design1     | Analyzing data statistics                   | 100
2012-02-14 10:31:25 | design1     | Design in progress: Query optimization phase   |
2012-02-14 10:31:25 | design1     | Optimizing query performance                | 37.5
2012-02-14 10:31:31 | design1     | Optimizing query performance                | 62.5
2012-02-14 10:31:36 | design1     | Optimizing query performance                | 75
2012-02-14 10:31:39 | design1     | Optimizing query performance                | 87.5
2012-02-14 10:31:41 | design1     | Optimizing query performance                | 87.5
2012-02-14 10:31:42 | design1     | Design in progress: Storage optimization phase |
2012-02-14 10:31:44 | design1     | Optimizing storage footprint                | 4.17
2012-02-14 10:31:44 | design1     | Optimizing storage footprint                | 16.67
2012-02-14 10:32:04 | design1     | Optimizing storage footprint                | 29.17
2012-02-14 10:32:04 | design1     | Optimizing storage footprint                | 31.25
2012-02-14 10:32:05 | design1     | Optimizing storage footprint                | 33.33
2012-02-14 10:32:05 | design1     | Optimizing storage footprint                | 35.42
2012-02-14 10:32:05 | design1     | Optimizing storage footprint                | 37.5
2012-02-14 10:32:05 | design1     | Optimizing storage footprint                | 62.5
2012-02-14 10:32:39 | design1     | Optimizing storage footprint                | 87.5
2012-02-14 10:32:39 | design1     | Optimizing storage footprint                | 87.5
2012-02-14 10:32:41 | design1     | Optimizing storage footprint                | 100
2012-02-14 10:33:12 | design1     | Design completed successfully               |
(24 rows)
```

DESIGN_TABLES

Contains information about all the design tables for all the designs for which you are the owner. Each row contains information about a different design table. Vertica creates this table when you run DESIGNER_CREATE_DESIGN .

Column Name	Column Type	Description
DESIGN_NAME	VARCHAR	Unique name that the user specified for the design.
DESIGN_TABLE_ID	INTEGER	Unique ID that Database Designer assigned to the design table.
TABLE_SCHEMA	VARCHAR	Name of the schema that contains the design table.
TABLE_ID	INTEGER	System object identifier (OID) assigned to the design table.

TABLE_NAME	VARCHAR	Name of the design table.

Example

Add all the tables from the VMart database to the design VMART_DESIGN. This operation populates the DESIGN_TABLES table:

```
=> SELECT DESIGNER_ADD_DESIGN_TABLES('VMART_DESIGN','online_sales.*');
DESIGNER_ADD_DESIGN_TABLES
----------------------------
 3
(1 row)
=> SELECT DESIGNER_ADD_DESIGN_TABLES('VMART_DESIGN','public.*');
DESIGNER_ADD_DESIGN_TABLES
----------------------------
 9
(1 row)
=> SELECT DESIGNER_ADD_DESIGN_TABLES('VMART_DESIGN','store.*');
DESIGNER_ADD_DESIGN_TABLES
----------------------------
 3
(1 row)
=> SELECT * FROM DESIGN_TABLES;
design_name  | design_table_id | table_schema |     table_id      |      table_name
-------------+-----------------+--------------+-------------------+----------------------
VMART_DESIGN |               1 | online_sales | 45035996373718754 | online_page_dimension
VMART_DESIGN |               2 | online_sales | 45035996373718758 | call_center_dimension
VMART_DESIGN |               3 | online_sales | 45035996373718762 | online_sales_fact
VMART_DESIGN |               4 | public       | 45035996373718766 | customer_dimension
VMART_DESIGN |               5 | public       | 45035996373718770 | product_dimension
VMART_DESIGN |               6 | public       | 45035996373718774 | promotion_dimension
VMART_DESIGN |               7 | public       | 45035996373718778 | date_dimension
VMART_DESIGN |               8 | public       | 45035996373718782 | vendor_dimension
VMART_DESIGN |               9 | public       | 45035996373718786 | employee_dimension
VMART_DESIGN |              10 | public       | 45035996373718822 | shipping_dimension
VMART_DESIGN |              11 | public       | 45035996373718826 | warehouse_dimension
VMART_DESIGN |              12 | public       | 45035996373718830 | inventory_face
VMART_DESIGN |              13 | store        | 45035996373718794 | store_dimension
VMART_DESIGN |              14 | store        | 45035996373718798 | store_sales_fact
VMART_DESIGN |              15 | store        | 45035996373718812 | store_orders_fact
      (15 rows)
```

DESIGNS

Contains information about a Database Designer design. After you create a design and specify certain parameters for Database Designer, DESIGNER_CREATE_DESIGN creates this table in the V_MONITOR schema.

Column Name	Column Type	Description
DESIGN_ID	INTEGER	Unique ID that Database Designer assigns to this design.
DESIGN_NAME	VARCHAR	Name that the user specifies for the design.
KSAFETY_LEVEL	INTEGER	K-safety level for the design. Database Designer assigns a K-safety value of 0 for clusters with 1 or 2 nodes, and assigns a value of 1 for clusters with 3 or more nodes.

OPTIMIZATION_OBJECTIVE	VARCHAR	Name of the optimization objective for the design. Valid values are: • QUERY • LOAD • BALANCED (default)
DESIGN_TYPE	VARCHAR	Name of the design type. Valid values are: • COMPREHENSIVE (default) • INCREMENTAL
PROPOSE_SUPER_FIRST	BOOLEAN	Specifies to propose superprojections before projections, by default f . If DESIGN_MODE is COMPREHENSIVE , this field has no impact.
DESIGN_AVAILABLE	BOOLEAN	t if the design is currently available, otherwise, f (default).
COLLECTED_STATISTICS	BOOLEAN	t if statistics are to be collected when creating the design, otherwise, f (default).
POPULATE_DESIGN_TABLES_FROM_QUERIES	BOOLEAN	t if you want to populate the design tables from the design queries, otherwise, f (default).
ENCODING_DESIGN	BOOLEAN	t if the design is an encoding optimization design on pre-existing projections, otherwise, f (default).
DEPLOYMENT_PARALLELISM	INTEGER	Number of tables to be deployed in parallel when the design is complete. Default: 0
UNSEGMENTED_PROJECTIONS	BOOLEAN	t if you specify unsegmented projections, otherwise, f (default).
ANALYZE_CORRELATIONS_MODE	INTEGER	Specifies how Database Designer should handle existing column correlations in a design and whether or not Database Designer should reanalyze existing column correlations. • 0: (default) Ignore column correlations when creating the design. • 1: Consider the existing correlations in the tables when creating the design. • 2: Analyze column correlations if not previously performed, and consider the column correlations when creating the design. • 3: Analyze all column correlations in the tables and consider them when creating the design, even if they have been analyzed previously.

DISK_RESOURCE_REJECTIONS

Returns requests for resources that are rejected due to disk space shortages. Output is aggregated by both RESOURCE_TYPE and REJECTED_REASON to provide more comprehensive information.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
RESOURCE_TYPE	VARCHAR	The resource request requester (example: Temp files).
REJECTED_REASON	VARCHAR	One of the following: • Insufficient disk space • Failed volume

REJECTED_COUNT	INTEGER	Number of times this REJECTED_REASON has been given for this RESOURCE_TYPE .
FIRST_REJECTED_TIMESTAMP	TIMESTAMP	The time of the first rejection for this REJECTED_REASON and RESOURCE_TYPE.
LAST_REJECTED_TIMESTAMP	TIMESTAMP	The time of the most recent rejection for this REJECTED_REASON and RESOURCE_TYPE .
LAST_REJECTED_VALUE	INTEGER	The value of the most recent rejection for this REJECTED_REASON and RESOURCE_TYPE .

See also

- RESOURCE_REJECTIONS
- CLEAR_RESOURCE_REJECTIONS

DISK_STORAGE

Returns the amount of disk storage used by the database on each node. Each node can have one or more storage locations, and the locations can be on different disks with separate properties, such as free space, used space, and block size. The information in this system table is useful in determining where data files reside.

All returned values for this system table are in the context of the file system of the host operating system, and are not specific to Vertica-specific space.

The storage usage annotation called CATALOG indicates that the location is used to store the catalog. Each CATALOG location is specified only when creating a new database. You cannot add a CATALOG location annotation using CREATE LOCATION , nor remove an existing CATALOG annotation.

Storage location performance

The performance of a storage location is measured with two values:

- Throughput in MB/sec
- Latency in seeks/sec

These two values are converted to a single number (Speed) with the following formula:

$$read\text{-}time = (1/throughput) + (1/latency)$$

- *read-time* : Time to read 1MB of data
- 1/ *throughput* : Time to read 1MB of data
- 1/ *latency* : Time to seek to the data.

A disk is faster than another disk if its *read-time* is less.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Node name for which information is listed.
STORAGE_PATH	VARCHAR	Path where the storage location is mounted.
STORAGE_USAGE	VARCHAR	Type of information stored in the location, one of the following: • DATA : Only data is stored in the location. • TEMP : Only temporary files that are created during loads or queries are stored in the location. • DATA,TEMP : Both types of files are stored in the location. • USER : The storage location can be used by non-dbadmin users, who are granted access to the storage location • CATALOG : The area is used for the Vertica catalog. This usage is set internally and cannot be removed or changed.
RANK	INTEGER	Integer rank assigned to the storage location based on its performance. Ranks are used to create a storage locations on which projections, columns, and partitions are stored on different disks based on predicted or measured access patterns. See Managing storage locations .

THROUGHPUT	INTEGER	Integer that measures a storage location's performance in MB/sec. 1/ *throughput* is the time taken to read 1MB of data.
LATENCY	INTEGER	Integer that measures a storage location's performance in seeks/sec. 1/ *latency* is the time taken to seek to the data.
STORAGE_STATUS	VARCHAR	Status of the storage location, one of the following: • active • retired
DISK_BLOCK_SIZE_BYTES	INTEGER	Block size of the disk in bytes
DISK_SPACE_USED_BLOCKS	INTEGER	Number of disk blocks in use
DISK_SPACE_USED_MB	INTEGER	Number of megabytes of disk storage in use
DISK_SPACE_FREE_BLOCKS	INTEGER	Number of free disk blocks available
DISK_SPACE_FREE_MB	INTEGER	Number of megabytes of free storage available
DISK_SPACE_FREE_PERCENT	VARCHAR	Percentage of free disk space remaining

ERROR_MESSAGES

Lists system error messages and warnings Vertica encounters while processing queries. Some errors occur when no transaction is in progress, so the transaction identifier or statement identifier columns might return NULL.

Column Name	Data Type	Description
EVENT_TIMESTAMP	TIMESTAMPTZ	Time when the row recorded the event
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information
USER_ID	INTEGER	Identifier of the user who received the error message
USER_NAME	VARCHAR	Name of the user who received the error message when Vertica recorded the session
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
REQUEST_ID	INTEGER	Unique identifier of the query request in the user session
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any; otherwise NULL
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID, STATEMENT_ID, and REQUEST_ID uniquely identifies a statement within a session.

ERROR_LEVEL	VARCHAR	Severity of the error, one of the following: • LOG • INFO • NOTICE • WARNING • ERROR • ROLLBACK • INTERNAL • FATAL • PANIC
ERROR_CODE	INTEGER	Error code that Vertica reports
MESSAGE	VARCHAR	Textual output of the error message
DETAIL	VARCHAR	Additional information about the error message, in greater detail
HINT	VARCHAR	Actionable hint about the error. For example: HINT: Set the locale in this session to en_US@collation=binary using the command "\locale en_US@collation=binary"

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

EVENT_CONFIGURATIONS

Monitors the configuration of events.

Column Name	Data Type	Description
EVENT_ID	VARCHAR	The name of the event.
EVENT_DELIVERY_CHANNELS	VARCHAR	The delivery channel on which the event occurred.

EXECUTION_ENGINE_PROFILES

Provides profiling information about runtime query execution. The hierarchy of IDs, from highest level to actual execution, is:

- PATH_ID
- BASEPLAN_ID
- LOCALPLAN_ID
- OPERATOR_ID

Counters (output from the COUNTER_NAME column) are collected for each actual Execution Engine (EE) operator instance.

The following columns combine to form a unique key:

- TRANSACTION_ID
- STATEMENT_ID
- NODE_NAME
- OPERATOR_ID
- COUNTER_NAME
- COUNTER_TAG

Column Name	Data Type	Description

NODE_NAME	VARCHAR	Node name for which information is listed.
USER_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the user.
USER_NAME	VARCHAR	User name for which query profile information is listed.
SESSION_ID	VARCHAR	Identifier of the session for which profiling information is captured. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session if any; otherwise NULL .
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed.
OPERATOR_NAME	VARCHAR	Name of the Execution Engine (EE) component; for example, NetworkSend .
OPERATOR_ID	INTEGER	Identifier assigned by the EE operator instance that performs the work. OPERATOR_ID is different from LOCALPLAN_ID because each logical operator, such as Scan , may be executed by multiple threads concurrently. Each thread operates on a different operator instance, which has its own ID.
BASEPLAN_ID	INTEGER	Assigned by the optimizer on the initiator to EE operators in the original base (EXPLAIN) plan. Each EE operator in the base plan gets a unique ID.
PATH_ID	INTEGER	Identifier that Vertica assigns to a query operation or *path* ; for example to a logical grouping operation that might be performed by multiple execution engine operators. For each path, the same PATH ID is shared between the query plan (using EXPLAIN output) and in error messages that refer to joins.
LOCALPLAN_ID	INTEGER	Identifier assigned by each local executor while preparing for plan execution (local planning). Some operators in the base plan, such as the Root operator, which is connected to the client, do not run on all nodes. Similarly, certain operators, such as ExprEval , are added and removed during local planning due to implementation details.
ACTIVITY_ID	INTEGER	Identifier of the plan activity.
RESOURCE_ID	INTEGER	Identifier of the plan resource.
COUNTER_NAME	VARCHAR	Name of the counter (see Counter Names below). The counter counts events for one statement.
COUNTER_TAG	VARCHAR	String that uniquely identifies the counter for operators that might need to distinguish between different instances. For example, COUNTER_TAG is used to identify to which of the node bytes are being sent to or received from the NetworkSend operator.
COUNTER_VALUE	INTEGER	Value of the counter.
IS_EXECUTING	BOOLEAN	Indicates whether the profile is active or completed.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

Counter names

The value of COUNTER_NAME can be any of the following:

COUNTER_NAME	**Description**

active threads	A counter of the LoadUnion operator, indicates the number of input threads (Load operators) that are currently processing input.
blocks analyzed by SIPs expression	Number of data blocks analyzed by SIPS expression from the Scan operator.
blocks filtered by SIPs expression	Number of data blocks filtered by SIPS expression from the Scan operator.
blocks filtered by SIPs value lists	Number of data blocks filtered by SIPS sorted value lists from the Scan operator.
buffers spilled	[NetworkSend] Buffers spilled to disk by NetworkSend .
bytes read from disk	[Scan] Amount of data read (locally or remotely) from ROS containers on disk.
bytes read from disk cache	[Scan] Amount of data read from cache .
bytes received	Number of bytes received over the network for query execution.
bytes sent	[NetworkSend Size of data after encoding and compression sent over the network (actual network bytes).
bytes spilled	[NetworkSend] Bytes spilled to disk by NetworkSend.
bytes total	[SendFiles] (recover-by-container plan): Total number of bytes to send/receive.
cached storages cumulative size (bytes)	[StorageMerge] Total amount of temp space used by operator for caching .
cached storages current size (bytes)	[StorageMerge] Current amount of temp space used for caching .
cached storages peak size (bytes)	[StorageMerge] Peak amount of temp space an operator used for caching .
clock time (µs)	Real-time clock time spent processing the query, in microseconds.
clock time (µs) of UDChunker	Real-time clock time spent in the UDChunker phase of a load operation, in microseconds. Use the COUNTER_TAG column to distinguish among load sources.
clock time (µs) of UDFilter(s)	Real-time clock time spent in all UDFilter phases of a load operation, in microseconds. Use the COUNTER_TAG column to distinguish among load sources.
clock time (µs) of UDParser	Real-time clock time spent in the UDParser phase of a load operation, in microseconds. Use the COUNTER_TAG column to distinguish among load sources.
clock time (µs) of UDSource	Real-time clock time spent in the UDSource phase of a load operation, in microseconds. Use the COUNTER_TAG column to distinguish among load sources.
completed merge phases	Number of merge phases already completed by an LSort or DataTarget operator. Compare to the total merge phases . Variants on this value include join inner completed merge phases .

cumulative size of raw temp data (bytes)	Total amount of temporary data the operator has written to files. Compare to cumulative size of temp files (bytes) to understand impact of encoding and compression in an externalizing operator. Variants on this value include join inner cumulative size of raw temp files (bytes) .
cumulative size of temp files (bytes)	For externalizing operators only, the total number of encoded and compressed temp data the operator has written to files. A sort operator might go through multiple merge phases, where at each pass sorted chunks of data are merged into fewer chunks. This counter remembers the cumulative size of all temp files past and present. Variants on this value include join inner cumulative size of temp files (bytes) .
current allocated rid memory (bytes)	Per-rid memory tracking: current allocation amount under this rid.
current file handles	Number of files open.
current memory allocations (count)	Number of actual allocator calls made.
current memory capacity (bytes)	Amount of system memory held, which includes chunks that are only partially consumed.
current memory overhead (bytes)	Memory consumed, for example, by debug headers. (Normally no overhead.)
current memory padding (bytes)	Memory padding for free list tiers (2^n bytes).
current memory requested (bytes)	Memory actually requested by the caller.
current size of temp files (bytes)	For externalizing operators only, the current size of the encoded and compressed temp data that the operator has written to files. Variants on this value include join inner current size of temp files (bytes) .
current threads	Unused.
current unbalanced memory allocations (count)	Pooled version of "current memory XXX" counters.
current unbalanced memory capacity (bytes)	
current unbalanced memory overhead (bytes)	
current unbalanced memory requested (bytes)	
distinct value estimation time (µs)	[Analyze Statistics] Time (in microcseconds) spent to estimate number of distinct values from the sample after data is read off disk and into the statistical sample.
encoded bytes received	[NetworkRecv] Size of received data after decompressed (but still encoded) received over the network.

encoded bytes sent	[NetworkSend] Size of data sent over the network after encoding.
end time	Time (timestamp) when Vertica stopped processing the operation
estimated rows produced	Number of rows that the optimizer estimated would be produced. See rows produced for the actual number of rows that are produced.
exceptions cumulative size of raw temp data (bytes)	Counters that store the total or current size of exception data.
exceptions rows cumulative size of temp files (bytes)	
exceptions rows current size of temp files (bytes)	
execution time (µs)	CPU clock time spent processing the query, in microseconds.
fast aggregated rows	Number of rows being processed by fast aggregations in the hash groupby operator (no group/aggregation).
files completed	Relevant only to SendFiles/RecvFiles operators (that is, recover-by-container plan) number of files sent/received.
files total	Relevant only to SendFiles/RecvFiles operators (that is, recover-by-container plan) total number of files to send/receive.
Hadoop FS bytes read through native libhdfs++ client	[Scan, Load] Number of bytes read from an hdfs source (using libhdfs++).
Hadoop FS bytes read through webhdfs	[Scan, Load] Number of bytes read from a webhdfs source.
Hadoop FS bytes written through webhdfs	[DataTarget] Number of bytes written to webhdfs storage.
Hadoop FS hdfs:// operations that used native libhdfs++ calls	[Scan, Load, DataTarget] Number of times Vertica opened a file with an hdfs:// URL and used the native hdfs protocol
Hadoop FS hdfs:// operations that used webhdfs calls	[Scan, Load, DataTarget] Number of times Vertica opened a file with an hdfs:// URL and used the webhdfs protocol
Hadoop FS read operations through native libhdfs++ client failure count	[Scan, Load] Number of times a native libhdfs++ source encountered an error and gave up

Hadoop FS read operations through native libhdfs++ client retry count	[Scan, Load] Number of times a native libhdfs++ source encountered an error and retried
Hadoop FS read operations through webhdfs failure count	[Scan, Load] Number of times a webhdfs source encountered an error and gave up
Hadoop FS read operations through webhdfs retry count	[Scan, Load] Number of times a webhdfs source encountered an error and retried
Hadoop FS write operations through webhdfs failure count	[DataTarget] Number of times a webhdfs write encountered an error and gave up
Hadoop FS write operations through webhdfs retry count	[DataTarget] Number of times a webhdfs write encountered an error and retried
histogram creation time(µs)	[Analyze Statistics] Time spent estimating the number of distinct values from the sample after data is read off disk and into the statistical sample.
initialization time (µs)	Time in microseconds spent initializing an operator during the CompilePlan step of query processing. For example, initialization time could include the time spent compiling expressions and gathering resources.
input queue wait (µs)	Time in microseconds that an operator spends waiting for upstream operators.
input rows	Actual number of rows that were read into the operator.
input size (bytes)	Total number of bytes of the Load operator's input source, where NULL is unknown (read from FIFO).
inputs processed	Number of sources processed by a Load operator.
intermediate rows to process	Number of rows to process in a phase as determined by a sort or GROUP BY (HASH) .
join inner clock time (µs)	Real clock time spent on processing the inner input of the join operator.
join inner completed mergephases	See the completed merge phases counter.
join inner cumulative size of raw temp data (bytes)	
join inner cumulative size of temp files (bytes)	

join inner current size of temp files (bytes)	
join inner execution time (µs)	The CPU clock time spent on processing the inner input of the join operator.
join inner hash table building time (µs)	Time spent for building the hash table for the inner input of the join operator.
join inner hash table collisions	Number of hash table collisions that occurred when building the hash table for the inner input of the join operator.
join inner hash table entries	Number of hash table entries for the inner input of the join operator.
join inner total merge phases	See the completed merge phases counter.
join outer clock time (µs)	Real clock time spent on processing the outer input of the join operator (including doing the join).
join outer execution time (µs)	CPU clock time spent on processing the outer input of the join operator (including doing the join).
max sample size (rows)	[Analyze Statistics] Maximum number of rows that will be stored in the statistical sample.
memory reserved (bytes)	Memory reserved by this operator. Deprecated.
network wait (µs)	[NetworkSend, NetworkRecv] Time in microseconds spent waiting on the network.
number of bytes read from communal storage	Estimated number of bytes read from communal storage to process this query.
number of bytes read from depot storage	Estimated number of bytes read from the depot to process this query.
number of cancel requests received	Number of cancel requests received (per operator) when cancelling a call to the execution engine.
number of invocations	Number of times a UDSF function was invoked.
number of storage containers opened	[Scan] Number of containers opened by the operator, at least 1. If the scan operator switches containers, this counter increases accordingly. See Local caching of storage containers for details.
output queue wait (µs)	Time in microseconds that an operator spends waiting for the output buffer to be consumed by a downstream operator.
peak allocated rid memory (bytes)	Per-rid memory tracking: peak allocation amount under this rid.

peak cooperating threads	Peak number of threads which parsed (in parallel) a single load source, using "cooperative parse." counter_tag indicates the source when joining with dc_load_events .
peak file handles	Peak value of the corresponding "current XXX" counters.
peak memory allocations (count)	
peak memory capacity (bytes)	
peak memory overhead (bytes)	
peak memory padding (bytes)	
peak memory requested (bytes)	
peak temp space	
peak threads	
peak unbalanced memory allocations (count)	
peak unbalanced memory capacity (bytes)	
peak unbalanced memory overhead (bytes)	
peak unbalanced memory padding (bytes)	
peak unbalanced memory requested (bytes)	
portion offset	Offset value of a portion descriptor in an apportioned load. counter_tag indicates the source when joining with dc_load_events .
portion size	Size value of a portion descriptor in an apportioned load. counter_tag indicates the source when joining with dc_load_events .
producer stall (µs)	[NetworkSend] Time in microseconds spent by NetworkSend when stalled waiting for network buffers to clear.
producer wait (µs)	[NetworkSend] Time in microseconds spent by the input operator making rows to send.
read (bytes)	Number of bytes read from the input source by the Load operator.
receive time (µs)	Time in microseconds that a Recv operator spends reading data from its socket.

rejected data cumulative size of raw temp data (bytes)	Counters that store total or current size of rejected row numbers. Are variants of: • cumulative size of raw temp data (bytes) • cumulative size of temp files (bytes) • current size of temp files (bytes)
rejected data cumulative size of temp files (bytes)	
rejected data current sizeof temp files (bytes)	
rejected rows cumulative size of raw temp data (bytes)	
rejected rows cumulative size of temp files (bytes)	
rejected rows current size of temp files (bytes)	
reserved rid memory (bytes)	Per-rid memory tracking: total memory reservation under this rid.
rle rows produced	Number of physical tuples produced by an operator. Complements the rows produced counter, which shows the number of logical rows produced by an operator. For example, if a value occurs 1000 rows consecutively and is RLE encoded, it counts as 1000 rows produced not only 1 rle rows produced .
ROS blocks bounded	[DataTarget] Number of ROS blocks created, due to boundary alignment with RLE prefix columns, when an EE DataTarget operator is writing to ROS containers.
ROS blocks encoded	[DataTarget] Number of ROS blocks created when an EE DataTarget operator is writing to ROS containers.
ROS bytes written	[DataTarget] Number of bytes written to disk when an EE DataTarget operator is writing to ROS containers.
rows added by predicate analysis	Number of rows in the query results that were added without individual evaluation, based on the predicate and range of possible results in a block.
rows filtered by SIPs expression	Number of rows filtered by the SIPS expression from the Scan operator.
rows filtered by query predicate	Number of rows excluded from query results because they failed a condition (predicate), for example in a WHERE clause.
rows in sample	[Analyze Statistics] Actual number of rows that will be stored in the statistical sample.
rows output by sort	[DataTarget] Number of rows sorted when an EE DataTarget operator is writing to ROS containers.
rows processed	[DataSource] Number of rows processed when an EE DataSource operator is reading from ROS containers.

rows processed by SIPs expression	Number of rows processed by the SIPS expression in the Scan operator.
rows produced	Number of logical rows produced by an operator. See also the rle rows produced counter.
rows pruned by query predicates	Number of rows discarded from query results because, based on predicates and value ranges, no row in the block could satisfy the predicate.
rows pruned by valindex	[DataSource] Number of rows it skips direct scanning with help of valindex when an EE DataSource operator is writing to ROS containers. This counter's value is not greater than "rows processed" counter.
rows read in sort	See the counter total rows read in sort .
rows received	[NetworkRecv] Number of received sent over the network.
rows rejected	Number of rows rejected by the Load operator.
rows sent	[NetworkSend] Number of rows sent over the network.
rows to process	Total number of rows to be processed in a phase, based upon the number of table accesses. Compare to the counter, rows processed . Divide the rows processed value by the rows to process value for percent completion.
rows written in join sort	Total number of rows being read out of the sort facility in Join.
rows written in sort	Number of rows read out of the sort by the SortManager. This counter and the counter total rows read from sort are typically equal.
send time (µs)	Time in microseconds that a Send operator spends writing data to its socket.
start time	Time (timestamp) when Vertica started to process the operation.
total merge phases	Number of merge phases an LSort or DataTarget operator must complete to finish sorting its data. NULL until the operator can compute this value (all data must first be ingested by the operator). Variants on this value include join inner total merge phases .
total rows read in join sort	Total number of rows being put into the sort facility in Join.
total rows read in sort total	Total number of rows ingested into the sort by the SortManager. This counter and the counter rows written in sort are typically equal.
total rows written in sort	See the counter, rows written in sort .
total sources	Total number of distinct input sources processed in a load.
unpacked (bytes)	Number of bytes produced by a compressed source in a load (for example, for a gzip file, the size of the file when decompressed).
wait clock time (µs)	StorageUnion wait time in microseconds.
written rows	[DataTarget] Number of rows written when an EE DataTarget operator writes to ROS containers

Examples

The two queries below show the contents of the EXECUTION_ENGINE_PROFILES table:

```
=> SELECT operator_name, operator_id, counter_name, counter_value
   FROM EXECUTION_ENGINE_PROFILES WHERE operator_name = 'Scan'
   ORDER BY counter_value DESC;
 operator_name | operator_id | counter_name |  counter_value
---------------+-------------+--------------+------------------
 Scan          |          20 | end time     | 1559929719983785
 Scan          |          20 | start time   | 1559929719983737
 Scan          |          18 | end time     | 1559929719983358
 Scan          |          18 | start time   | 1559929718069860
 Scan          |          16 | end time     | 1559929718069319
 Scan          |          16 | start time   | 1559929718069188
 Scan          |          14 | end time     | 1559929718068611
 Scan          |          18 | end time     | 1559929717579145
 Scan          |          18 | start time   | 1559929717579083
 Scan          |          16 | end time     | 1559929717578509
 Scan          |          18 | end time     | 1559929717379346
 Scan          |          18 | start time   | 1559929717379307
 Scan          |          16 | end time     | 1559929717378879
 Scan          |          16 | start time   | 1559929716894312
 Scan          |          14 | end time     | 1559929716893599
 Scan          |          14 | start time   | 1559929716893501
 Scan          |          12 | end time     | 1559929716892721
 Scan          |          16 | start time   | 1559929716666110
...

=> SELECT DISTINCT counter_name FROM execution_engine_profiles;
                counter_name
-------------------------------------------------------
 reserved rid memory (bytes)
 rows filtered by SIPs expression
 rows output by sort
 chunk rows scanned squared
 join inner execution time (us)
 current unbalanced memory requested (bytes)
 clock time (us)
 join outer clock time (us)
 exception handling execution time (us)
 peak memory capacity (bytes)
 bytes received
 peak memory requested (bytes)
 send time (us)
 ROS blocks encoded
 current size of temp files (bytes)
 peak memory allocations (count)
 current unbalanced memory overhead (bytes)
 rows segmented
...
```

The following query includes the path_id column, which links the path that the query optimizer takes (via the EXPLAIN command's textual output) with join error messages.

```
=> SELECT operator_name, path_id, counter_name, counter_value FROM execution_engine_profiles where operator_name = 'Join';
 operator_name | path_id |                  counter_name                  | counter_value
---------------+---------+------------------------------------------------+---------------
Join           |      64 | current memory allocations (count)             |             0
Join           |      64 | peak memory allocations (count)                |            57
Join           |      64 | current memory requested (bytes)               |             0
Join           |      64 | peak memory requested (bytes)                  |       1698240
Join           |      64 | current memory overhead (bytes)                |             0
Join           |      64 | peak memory overhead (bytes)                   |             0
Join           |      64 | current memory padding (bytes)                 |             0
Join           |      64 | peak memory padding (bytes)                    |        249840
Join           |      64 | current memory capacity (bytes)                |             0
Join           |      64 | peak memory capacity (bytes)                   |        294912
Join           |      64 | current unbalanced memory allocations (count)  |           145
Join           |      64 | peak unbalanced memory allocations (count)     |           146
Join           |      64 | current unbalanced memory requested (bytes)    |        116506
Join           |      64 | peak unbalanced memory requested (bytes)       |       1059111
Join           |      64 | current unbalanced memory overhead (bytes)     |          3120
Join           |      64 | peak unbalanced memory overhead (bytes)        |          3120
...
```

EXTERNAL_TABLE_DETAILS

Returns the amount of disk storage used by the source files backing external tables in the database. The information in this system table is useful in determining Hadoop license compliance.

When computing the size of an external table, Vertica counts all data found in the location specified by the COPY FROM clause. If you have a directory that contains ORC and delimited files, for example, and you define your external table with "COPY FROM *" instead of "COPY FROM *.orc", this table includes the size of the delimited files. (You would probably also encounter errors when querying that external table.) When you query this system table Vertica does not validate your table definition; it just uses the path to find files to report.

Restrict your queries to filter by schema, table, or format to avoid expensive queries. Vertica calculates the values in this table at query time, so "SELECT *" accesses every input file contributing to every external table.

Predicates in queries may use only the TABLE_SCHEMA, TABLE_NAME, and SOURCE_FORMAT columns. Values are case-sensitive.

This table includes TEMP external tables.

This table reports only data that the current user can read. To include all the data backing external tables, either query this table as a user that has access to all HDFS data or use a session delegation token that grants this access. For more information about using delegation tokens, see Accessing kerberized HDFS data .

Column Name	Data Type	Description
SCHEMA_OID	INTEGER	The unique identification number of the schema in which the external table resides.
TABLE_SCHEMA	VARCHAR	The name of the schema in which the external table resides.
TABLE_OID	INTEGER	A unique numeric ID assigned by the Vertica catalog that identifies the table.
TABLE_NAME	VARCHAR	The table name.
SOURCE_FORMAT	VARCHAR	The data format the source file used, one of ORC, PARQUET, DELIMITED, USER DEFINED, or NULL if another format.
TOTAL_FILE_COUNT	INTEGER	The number of files used to store this table's data, expanding globs and partitions.

TOTAL_FILE_SIZE_BYTES	INTEGER	Total number of bytes used by all of this table's data files.
SOURCE_STATEMENT	VARCHAR	The load statement used to copy data from the source files.
FILE_ACCESS_ERROR	VARCHAR	The access error returned during the source statement. NULL, if there was no access error during the source statement.

HIVE_CUSTOM_PARTITIONS_ACCESSED

This table provides information about all custom locations for Hive partition data that Vertica has accessed. It applies when Hive uses a non-default location for partition data, the HCatalog Connector is used to access that data, and the CREATE HCATALOG SCHEMA statement for the schema sets the CUSTOM_PARTITIONS parameter.

Column Name	Data Type	Description
ACCESS_TIME	TIMESTAMPTZ	Time when Vertica accessed the partition data.
ACCESS_NODE	VARCHAR(128)	Name of the node that performed the access.
TRANSACTION_ID	INTEGER	Identifier for the query that produced the access.
FILESYSTEM	VARCHAR(128)	File system of the partition data. This value is the scheme portion of the URL.
AUTHORITY	VARCHAR(128)	If the file system is HDFS, this value is the nameservice. If the file system is S3, it is the name of the bucket.
URL	VARCHAR(6400)	Full path to the partition.

Privileges

No explicit permissions are required; however, users see only the records that correspond to schemas they have permissions to access.

HOST_RESOURCES

Provides a snapshot of the node. This is useful for regularly polling the node with automated tools or scripts.

Column Name	Data Type	Description
HOST_NAME	VARCHAR	The host name for which information is listed.
OPEN_FILES_LIMIT	INTEGER	The maximum number of files that can be open at one time on the node.
THREADS_LIMIT	INTEGER	The maximum number of threads that can coexist on the node.
CORE_FILE_LIMIT_MAX_SIZE_BYTES	INTEGER	The maximum core file size allowed on the node.
PROCESSOR_COUNT	INTEGER	The number of system processors.
PROCESSOR_CORE_COUNT	INTEGER	The number of processor cores in the system.
PROCESSOR_DESCRIPTION	VARCHAR	A description of the processor. For example: Inter(R) Core(TM)2 Duo CPU T8100 @2.10GHz (1 row)
OPENED_FILE_COUNT	INTEGER	The total number of open files on the node.
OPENED_SOCKET_COUNT	INTEGER	The total number of open sockets on the node.

OPENED_NONFILE_NONSOCKET_COUNT	INTEGER	The total number of *other* file descriptions open in which 'other' could be a directory or FIFO. It is not an open file or socket.
TOTAL_MEMORY_BYTES	INTEGER	The total amount of physical RAM, in bytes, available on the system.
TOTAL_MEMORY_FREE_BYTES	INTEGER	The amount of physical RAM, in bytes, left unused by the system.
TOTAL_BUFFER_MEMORY_BYTES	INTEGER	The amount of physical RAM, in bytes, used for file buffers on the system
TOTAL_MEMORY_CACHE_BYTES	INTEGER	The amount of physical RAM, in bytes, used as cache memory on the system.
TOTAL_SWAP_MEMORY_BYTES	INTEGER	The total amount of swap memory available, in bytes, on the system.
TOTAL_SWAP_MEMORY_FREE_BYTES	INTEGER	The total amount of swap memory free, in bytes, on the system.
DISK_SPACE_FREE_MB	INTEGER	The free disk space available, in megabytes, for all storage location file systems (data directories).
DISK_SPACE_USED_MB	INTEGER	The disk space used, in megabytes, for all storage location file systems.
DISK_SPACE_TOTAL_MB	INTEGER	The total free disk space available, in megabytes, for all storage location file systems.

Examples

```
=> SELECT * FROM HOST_RESOURCES;
-[ RECORD 1 ]------------------+-----------------------------------------
host_name                     | 10.20.100.247

```

IO_USAGE

Provides disk I/O bandwidth usage history for the system.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
START_TIME	TIMESTAMP	Beginning of history interval.
END_TIME	TIMESTAMP	End of history interval.
READ_KBYTES_PER_SEC	FLOAT	Counter history of the number of bytes read measured in kilobytes per second.
WRITTEN_KBYTES_PER_SEC	FLOAT	Counter history of the number of bytes written measured in kilobytes per second.

Privileges

Superuser

LDAP_LINK_DRYRUN_EVENTS

Collects the results from LDAP dry run meta-functions:

- LDAP_LINK_DRYRUN_CONNECT
- LDAP_LINK_DRYRUN_SEARCH
- LDAP_LINK_DRYRUN_SYNC

For detailed instructions on using these meta-functions, see Configuring LDAP link with dry runs .

Column Name	Data Type	Description
EVENT_TIMESTAMP	TIMESTAMP	The date and time of an LDAP server and Vertica LDAP Link interaction.
NODE_NAME	VARCHAR	The clerk node.
SESSION_ID	VARCHAR	The identification number of the LDAP Link session.
USER_ID	INTEGER	The unique, system-generated user identification number.
USER_NAME	VARCHAR	The name of the user for which the information is listed.
TRANSACTION_ID	INTEGER	The system-generated transaction identification number. Is NULL if a transaction id does not exist.
EVENT_TYPE	VARCHAR	The result of a dry run.
ENTRY_NAME	VARCHAR	The name of the object on which the event occurred, if applicable. For example, the event SYNC-STARTED does not use an object.
ROLE_NAME	VARCHAR	The name of a role.
LDAPURIHASH	INTEGER	The URI hash number for the LDAP user.
LDAP_URI	VARCHAR	The URI for the LDAP server.
BIND_DN	VARCHAR	The Distinguished Name used for the dry run bind.
FILTER_GROUP	VARCHAR	The group attribute passed to the dry run meta-functions as LDAPLinkFilterGroup.
FILTER_USER	VARCHAR	The user attribute passed to the dry run meta-functions as LDAPLinkFilterUser.

LINK_SCOPE	VARCHAR	The DN level to replicate, passed to the dry run meta-functions as LDAPLinkScope.
SEARCH_BASE	VARCHAR	The DN level from which LDAP Link begins the search, passed to the dry run meta-functions as LDAPLinkSearchBase.
GROUP_MEMBER	VARCHAR	Identifies the members of an LDAP group, passed to the dry run meta-functions as LDAPLinkGroupMembers.
GROUP_NAME	VARCHAR	The LDAP field to use when creating a role name in Vertica, passed to the dry run meta-functions as LDAPLinkGroupName.
LDAP_USER_NAME	VARCHAR	The attribute that identifies individual users, passed to the dry run meta-functions as LDAPLinkUserName.
TLS_REC_CERT	VARCHAR	The connection policy used for the dry run connection for certificate management. This connection policy is set through the LDAPLink TLS CONFIGURATION .
TLS_CA_CERT	VARCHAR	The CA certificate used for the dry run connection specified by the LDAPLink TLS CONFIGURATION .

LDAP_LINK_EVENTS

Monitors events that occurred during an LDAP Link synchronization.

Column Name	Data Type	Description
EVENT_TIMESTAMP	TIMESTAMP	The time the event occurred.
NODE_NAME	VARCHAR	The name of the node or nodes for which the information is listed.
SESSION_ID	VARCHAR	The identification number of the LDAP Link session.
USER_ID	INTEGER	The unique, system-generated user identification number.
USER_NAME	VARCHAR	The name of the user for which the information is listed.
TRANSACTION_ID	INTEGER	The system-generated transaction identification number. Is NULL if a transaction id does not exist.
EVENT_TYPE	VARCHAR	The type of event being logged, for example USER_CREATED and PROCESSING_STARTED.
ENTRY_NAME	VARCHAR	The name of the object on which the event occurred, if applicable. For example, the event SYNC-STARTED does not use an object.
ENTRY_OID	INTEGER	The unique identification number for the object on which the event occurred, if applicable.
LDAPURIHASH	INTEGER	The URI hash number for the LDAP user.

LOAD_SOURCES

Like LOAD_STREAMS , monitors active and historical load metrics on each node. The LOAD_SOURCES table breaks information down by source and portion. Rows appear in this table only for COPY operations that are profiled or run for more than one second. LOAD_SOURCES does not record information about loads from ORC or Parquet files or COPY LOCAL.

A row is added to this table when the loading of a source or portion begins. Column values related to the progress of the load are updated during the load operation.

Columns that uniquely identify the load source (the various ID and name columns) and column IS_EXECUTING always have non-NULL values.

Column Name	Data Type	Description

SESSION_ID	VARCHAR	Identifier of the session for which Vertica captures load stream information. This identifier is unique within the cluster for the current session but can be reused in a subsequent session.
TRANSACTION_ID	INTEGER	Identifier for the transaction within a session. If a session is active, but no transaction has begun, this value is NULL.
STATEMENT_ID	INTEGER	Unique numeric ID for the currently running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID, STATEMENT_ID uniquely identifies a statement within a session.
STREAM_NAME	VARCHAR	Load stream identifier. If the user does not supply a specific name, the STREAM_NAME default value is *tablename* - *ID* , where: • *tablename* is the table into which data is being loaded. • *ID* is an integer value. *ID* is guaranteed to be unique within the current session on a node. This system table includes stream names for every COPY statement that takes more than 1 second to run. The 1-second duration includes the time to plan and execute the statement.
SCHEMA_NAME	VARCHAR	Schema name for which load information is listed. Lets you identify two streams that are targeted at tables with the same name in different schemas. NULL, if selecting from an external table.
TABLE_OID	INTEGER	A unique numeric ID assigned by the Vertica catalog that identifies the table. NULL, if selecting from an external table.
TABLE_NAME	VARCHAR	Name of the table being loaded. NULL, if selecting from an external table.
NODE_NAME	VARCHAR	Name of the node loading the source.
SOURCE_NAME	VARCHAR	• Full file path if copying from a file. • Value returned by getUri() if the source is a user-defined source. • STDIN if loading from standard input.
PORTION_OFFSET	INTEGER	Offset of the source portion, or NULL if not apportioned.
PORTION_SIZE	INTEGER	Size of the source portion, or NULL if not apportioned.
IS_EXECUTING	BOOLEAN	Whether this source is currently being parsed, where *t* is true and *f* is false.
READ_BYTES	INTEGER	Number of bytes read from the input file.
ROWS_PRODUCED	INTEGER	Number of rows produced from parsing the source.
ROWS_REJECTED	INTEGER	Number of rows rejected from parsing the source. If CopyFaultTolerantExpressions is true, also includes rows rejected during expression evaluation.
INPUT_SIZE	INTEGER	Size of the input source in bytes, or NULL for unsized sources. For UDSources, this value is the value returned by getSize() .
PARSE_COMPLETE_PERCENT	INTEGER	Percent of rows from the input file that have been parsed.
FAILURE_REASON	VARCHAR	Indicates cause for failure, one of the following: • Load source aborted, error message indicates cause. For example: COPY: Could not open file [*filename*] for reading; Permission denied • Load canceled, displays error message: Statement interrupted In all other cases, set to NULL.

PEAK_COOPERATING_THREADS	INTEGER	The peak number of threads parsing this source in parallel.
CLOCK_TIME_SOURCE	INTEGER	Displays in real-time how many microseconds (µs) have been consumed by the UDSource phase of a load operation.
CLOCK_TIME_FILTERS	INTEGER	Displays in real-time how many microseconds (µs) have been consumed by all UDFilter phases of a load operation.
CLOCK_TIME_CHUNKER	INTEGER	Displays in real-time how many microseconds (µs) have been consumed by the UDChunker phase of a load operation.
CLOCK_TIME_PARSER	INTEGER	Displays in real-time how many microseconds (µs) have been consumed by the UDParser phase of a load operation.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

LOAD_STREAMS

Monitors active and historical load metrics for load streams. This is useful for obtaining statistics about how many records got loaded and rejected from the previous load. Vertica maintains system table metrics until they reach a designated size quota (in kilobytes). This quota is set through internal processes, which you cannot set or view directly.

Column Name	Data Type	Description
SESSION_ID	VARCHAR	Identifier of the session for which Vertica captures load stream information. This identifier is unique within the cluster for the current session, but can be reused in a subsequent session.
TRANSACTION_ID	INTEGER	Identifier for the transaction within a session. If a session is active but no transaction has begun, this is NULL.
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID, STATEMENT_ID uniquely identifies a statement within a session.
STREAM_NAME	VARCHAR	Load stream identifier. If the user does not supply a specific name, the STREAM_NAME default value is: *tablename-ID* where *tablename* is the table into which data is being loaded, and *ID* is an integer value, guaranteed to be unique with the current session on a node. This system table includes stream names for every COPY statement that takes more than 1-second to run. The 1-second duration includes the time to plan and execute the statement.
SCHEMA_NAME	VARCHAR	Schema name for which load stream information is listed. Lets you identify two streams that are targeted at tables with the same name in different schemas
TABLE_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the table.
TABLE_NAME	VARCHAR	Name of the table being loaded.
LOAD_START	VARCHAR	Linux system time when the load started.
LOAD_DURATION_MS	NUMERIC(54,0)	Duration of the load stream in milliseconds.
IS_EXECUTING	BOOLEAN	Indicates whether the load is executing, where *t* is true and *f* is false.
ACCEPTED_ROW_COUNT	INTEGER	Number of rows loaded.

REJECTED_ROW_COUNT	INTEGER	Number of rows rejected.
READ_BYTES	INTEGER	Number of bytes read from the input file.
INPUT_FILE_SIZE_BYTES	INTEGER	Size of the input file in bytes. **Note:** When using STDIN as input, the input file size is zero (0).
PARSE_COMPLETE_PERCENT	INTEGER	Percent of rows from the input file that have been parsed.
UNSORTED_ROW_COUNT	INTEGER	Cumulative number rows not sorted across all projections. **Note:** UNSORTED_ROW_COUNT could be greater than ACCEPTED_ROW_COUNT because data is copied and sorted for every projection in the target table.
SORTED_ROW_COUNT	INTEGER	Cumulative number of rows sorted across all projections.
SORT_COMPLETE_PERCENT	INTEGER	Percent of rows from the input file that have been sorted.

Privileges

If you have the SYSMONITOR role or are the dbadmin user, this table shows all loads. Otherwise it shows only your loads.

LOCK_USAGE

Provides aggregate information about lock requests, releases, and attempts, such as wait time/count and hold time/count. Vertica records:

- Lock attempts at the end of the locking process
- Lock releases after lock attempts are released

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information on which lock interaction occurs.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
OBJECT_NAME	VARCHAR	Name of object being locked; can be a table or an internal structure (projection, global catalog, or local catalog).
MODE	VARCHAR	Intended operations of the transaction. Otherwise, this value is NONE. For a list of lock modes and compatibility, see Lock modes .
AVG_HOLD_TIME	INTERVAL	Average time (measured in intervals) that Vertica holds a lock.
MAX_HOLD_TIME	INTERVAL	Maximum time (measured in intervals) that Vertica holds a lock.
HOLD_COUNT	INTEGER	Total number of times the lock was granted in the given mode.
AVG_WAIT_TIME	INTERVAL	Average time (measured in intervals) that Vertica waits on the lock.
MAX_WAIT_TIME	INTERVAL	Maximum time (measured in intervals) that Vertica waits on a lock.
WAIT_COUNT	INTEGER	Total number of times lock was unavailable at the time it was first requested.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

LOCKS

Monitors lock grants and requests for all nodes. A table call with no results indicates that no locks are in use.

Column Name	Data Type	Description
NODE_NAMES	VARCHAR	Nodes on which lock interaction occurs. **Node Rollup:** NODE_NAMES are separated by commas. A transaction can have the same lock in the same mode in the same scope on multiple nodes. However, the transaction gets only one (1) line in the table.
OBJECT_NAME	VARCHAR	Name of object being locked; can be a table or an internal structure (projection, global catalog, or local catalog).
OBJECT_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog that identifies the object being locked.
TRANSACTION_ID	VARCHAR	Identification of transaction within the session, if any; otherwise NULL . Useful for creating joins to other system tables.
TRANSACTION_DESCRIPTION	VARCHAR	Identification of transaction and associated description. Typically this query caused the transaction's creation.
LOCK_MODE	VARCHAR	Intended operation of the transaction. For a list of lock modes and compatibility, see Lock modes .
LOCK_SCOPE	VARCHAR	Expected duration of the lock after it is granted. Before the lock is granted, Vertica lists the scope as REQUESTED . Once a lock has been granted, the following scopes are possible: • STATEMENT_LOCALPLAN • STATEMENT_COMPILE • STATEMENT_EXECUTE • TRANSACTION_POSTCOMMIT • TRANSACTION All scopes, other than TRANSACTION , are transient and are used only as part of normal query processing.
REQUEST_TIMESTAMP	TIMESTAMP	Time when the transaction began waiting on the lock.
GRANT_TIMESTAMP	TIMESTAMP	Time the transaction acquired or upgraded the lock: • Return values are NULL until the grant occurs. • If the grant occurs immediately, values might be the same as REQUEST_TIMESTAMP .

LOGIN_FAILURES

This system table lists failures for each failed login attempt. This information helps you determine if a user is having difficulty getting into the database or identify a possible intrusion attempt.

Column Name	Data Type	Description
LOGIN_TIMESTAMP	TIMESTAMPTZ	Time when Vertica recorded the login.
DATABASE_NAME	VARCHAR	The name of the database for the login attempt.
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
USER_NAME	VARCHAR	Name of the user whose login failed at the time Vertica recorded the session.
CLIENT_HOSTNAME	VARCHAR	Host name and port of the TCP socket from which the client connection was made. NULL if the session is internal.
CLIENT_PID	INTEGER	Identifier of the client process that issued this connection. In some cases, the client process is on a different machine from the server.
CLIENT_VERSION	VARCHAR	Unused.
CLIENT_OS_USER_NAME	VARCHAR	The name of the user that logged into, or attempted to log into, the database. This is logged even when the login attempt is unsuccessful.
AUTHENTICATION_METHOD	VARCHAR	Name of the authentication method used to validate the client application or user who is trying to connect to the server using the database user name provided Valid values: • Trust • Reject • GSS • LDAP • Ident • Hash • TLS See Implementing client authentication for further information.
CLIENT_AUTHENTICATION_NAME	VARCHAR	Locally created name of the client authentication method.
REASON	**VARCHAR**	**Description of login failure reason.** **Valid values:** • **INVALID USER** • **ACCOUNT LOCKED** • **REJECT** • **FAILED** • **INVALID AUTH METHOD** • **INVALID DATABASE**

Privileges

Superuser

MEMORY_EVENTS

Records events related to Vertica memory usage.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Node where the event occurred
EVENT_TIME	TIMESTAMPTZ	Event start time
EVENT_TYPE	VARCHAR	Type of event, one of the following: • MEMORY_REPORT : The Vertica memory poller created a report on memory usage, for the reason specified in EVENT_REASON . For details, see Memory usage reporting . • MALLOC_TRIM : Vertica ran the glibc function malloc_trim() to reclaim glibc-allocated memory. For details, see Memory trimming .
EVENT_REASON	VARCHAR	Reason for the event—for example, trim threshold was greater than *RSS* / *available-memory* .
EVENT_DETAILS	VARCHAR	Additional information about the event—for example, how much memory malloc_trim() reclaimed.
DURATION_US	INTEGER	Duration of the event in microseconds (µs).

Privileges

None

Examples

```
=> SELECT * FROM MEMORY_EVENTS;
-[ RECORD 1 ]-+-------------------------------------------------------------
event_time    | 2019-05-02 13:17:20.700892-04
node_name     | v_vmart_node0001
event_type    | MALLOC_TRIM
event_reason  | memory_trim()
event_details | pre-trim RSS 378822656 post-trim RSS 372129792 benefit 0.0176675
duration_us   | 7724
```

MEMORY_USAGE

Records system resource history for memory usage. This is useful for comparing memory that Vertica uses versus memory in use by the entire system.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
START_TIME	TIMESTAMP	Beginning of history interval.
END_TIME	TIMESTAMP	End of history interval.
AVERAGE_MEMORY_USAGE_PERCENT	FLOAT	Records the average memory usage in percent of total memory (0-100) during the history interval.

Privileges

Superuser

MERGEOUT_PROFILES

Returns information about and status of automatic mergeout operations.

This table excludes operations with a REQUEST_TYPE of NO_WORK. It also excludes the operations of user-invoked mergeout functions, such as DO_TM_TASK.

Column Name	Data Type	Description
START_TIME	TIMESTAMP	When the Tuple Mover began processing storage location mergeout requests.
END_TIME	TIMESTAMP	When the mergeout finished.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session.
NODE_NAME	VARCHAR	Node name for which information is listed.
SCHEMA_NAME	VARCHAR	The schema for which information is listed.
TABLE_NAME	VARCHAR	The table for which information is listed.
PROJECTION_NAME	VARCHAR	The projection for which information is listed.
PROJECTION_OID	INTEGER	Projection's unique catalog identifier.
REQUEST_TYPE	VARCHAR	Identifies the type of operation performed by the tuple mover. Possible values: • PURGE • MERGEOUT • DVMERGEOUT
EVENT_TYPE	VARCHAR	Displays the status of the mergeout operation. Possible values: • ERROR • RETRY • REQUEST_QUEUED • REQUEST_COMPLETED
THREAD_ID	INTEGER	The ID of the thread that performed the mergeout.
STRATA_NO	INTEGER	The ID of the strata the ROS container belongs to.
PARTITION_KEY	INTEGER	The key of the partition.
CONTAINER_COUNT	INTEGER	The number of ROS containers in the mergeout operation.
TOTAL_SIZE_IN_BYTES	INTEGER	Size in bytes of all ROS containers in the mergeout operation.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

Examples

To following statement returns failed mergeout operations for table public.store_orders.

```
=> SELECT node_name, schema_name, table_name, request_type, event_type FROM mergeout_profiles WHERE event_type='ERROR';
   node_name     | schema_name |  table_name  | request_type | event_type
-----------------+-------------+--------------+--------------+------------
v_vmart_node0002 | public      | store_orders | MERGEOUT     | ERROR
v_vmart_node0002 | public      | store_orders | MERGEOUT     | ERROR
v_vmart_node0001 | public      | store_orders | MERGEOUT     | ERROR
v_vmart_node0001 | public      | store_orders | MERGEOUT     | ERROR
v_vmart_node0003 | public      | store_orders | MERGEOUT     | ERROR
v_vmart_node0003 | public      | store_orders | MERGEOUT     | ERROR
v_vmart_node0003 | public      | store_orders | MERGEOUT     | ERROR
v_vmart_node0002 | public      | store_orders | MERGEOUT     | ERROR
v_vmart_node0001 | public      | store_orders | MERGEOUT     | ERROR
(9 rows)
```

MONITORING_EVENTS

Reports significant events that can affect database performance and functionality if you do not address their root causes.

See Monitoring events for details.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
EVENT_CODE	INTEGER	Numeric identifier that indicates the type of event. See Event Types in Monitoring events for a list of event type codes.
EVENT_ID	INTEGER	Unique numeric ID that identifies the specific event.
EVENT_SEVERITY	VARCHAR	Severity of the event from highest to lowest. These events are based on standard syslog severity types: 0 – Emergency 1 – Alert 2 – Critical 3 – Error 4 – Warning 5 – Notice 6 – Info 7 – Debug
EVENT_POSTED_TIMESTAMP	TIMESTAMPTZ	When this event was posted.
EVENT_CLEARED_TIMESTAMP	TIMESTAMPTZ	When this event was cleared. **Note:** You can also query the ACTIVE_EVENTS system table to see events that have not been cleared.
EVENT_EXPIRATION	TIMESTAMPTZ	Time at which this event expires. If the same event is posted again prior to its expiration time, this field gets updated to a new expiration time.

EVENT_CODE_DESCRIPTION	VARCHAR	Brief description of the event and details pertinent to the specific situation.
EVENT_PROBLEM_DESCRIPTION	VARCHAR	Generic description of the event.

Privileges

Superuser

ACTIVE_EVENTS

NETWORK_INTERFACES

Provides information about network interfaces on all Vertica nodes.

Column Name	Data Type	Description
NODE_ID	INTEGER	Unique identifier for the node that recorded the row.
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
INTERFACE	VARCHAR	Network interface name.
IP_ADDRESS_FAMILY	VARCHAR	Network address family (either 'ipv4' or 'ipv6').
IP_ADDRESS	VARCHAR	IP address for this interface.
SUBNET	VARCHAR	IP subnet for this interface.
MASK	VARCHAR	IP network mask for this interface.
BROADCAST_ADDRESS	VARCHAR	IP broadcast address for this interface.

Privileges

NETWORK_USAGE

Provides network bandwidth usage history on the system. This is useful for determining if Vertica is using a large percentage of its available network bandwidth.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
START_TIME	TIMESTAMP	Beginning of history interval.
END_TIME	TIMESTAMP	End of history interval.
TX_KBYTES_PER_SEC	FLOAT	Counter history of outgoing (transmitting) usage in kilobytes per second.
RX_KBYTES_PER_SEC	FLOAT	Counter history of incoming (receiving) usage in kilobytes per second.

Privileges

Superuser

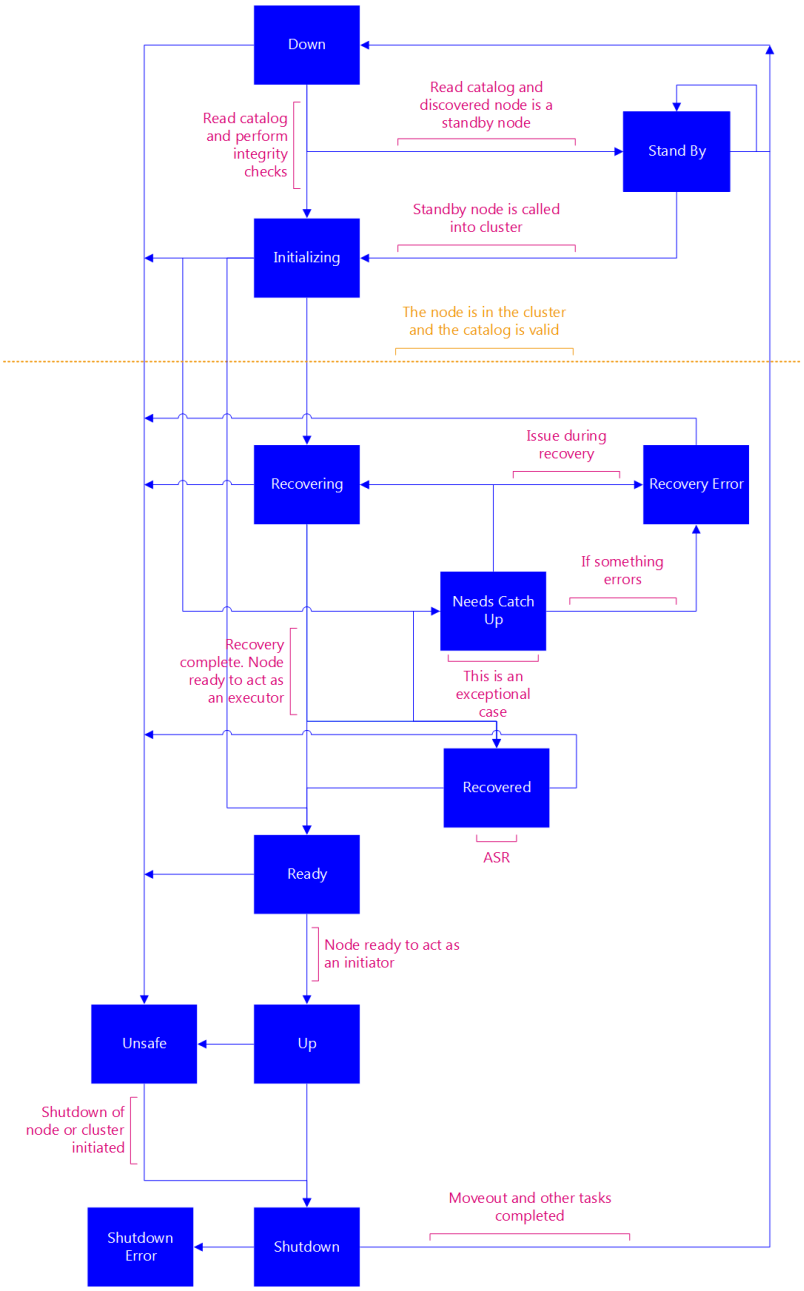
NODE_EVICTIONS

Monitors node evictions on the system.

Column Name	Data Type	Description
EVICTION_TIMESTAMP	TIMESTAMPTZ	Timestamp when the eviction request was made.
NODE_NAME	VARCHAR	The node name logging the information.
EVICTED_NODE_NAME	VARCHAR	The node name of the evicted node.
EVICTED_NODE_ID	INTEGER	The evicted node ID.
NODE_STATE_BEFORE_EVICTION	VARCHAR	The previous node state at the time of eviction.

NODE_RESOURCES

Provides a snapshot of the node. This is useful for regularly polling the node with automated tools or scripts.



Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
HOST_NAME	VARCHAR	The hostname associated with a particular node.
NODE_IDENTIFIER	VARCHAR	A unique identifier for the node.
PROCESS_SIZE_BYTES	INTEGER	The total size of the program.
PROCESS_RESIDENT_SET_SIZE_BYTES	INTEGER	The total number of bytes that the process has in memory.
PROCESS_SHARED_MEMORY_SIZE_BYTES	INTEGER	The amount of shared memory used.
PROCESS_TEXT_MEMORY_SIZE_BYTES	INTEGER	The total number of text bytes that the process has in physical memory. This does not include any shared libraries.
PROCESS_DATA_MEMORY_SIZE_BYTES	INTEGER	The amount of physical memory, in bytes, used for performing processes. This does not include the executable code.
PROCESS_LIBRARY_MEMORY_SIZE_BYTES	INTEGER	The total number of library bytes that the process has in physical memory.
PROCESS_DIRTY_MEMORY_SIZE_BYTES	INTEGER	The number of bytes that have been modified since they were last written to disk.
SPREAD_HOST	VARCHAR	The node name of the spread host.
NODE_PORT	VARCHAR	The port used for intra-cluster communication.
DATA_PORT	VARCHAR	The port used by the Vertica client.
DBCLERK	BOOLEAN	Whether this node is the DB clerk. The DB clerk is responsible for coordinating some administrative tasks in the database.

NODE_STATES

Monitors node recovery state-change history on the system. Vertica returns information only on nodes whose state is currently UP. To determine which nodes are not up, query the NODES table.

Column Name	Data Type	Description
EVENT_TIMESTAMP	TIMESTAMPTZ	Time when Vertica recorded the event.
NODE_ID	INTEGER	Catalog-assigned integer value that uniquely identifies thenode.
NODE_NAME	VARCHAR	Name of the node.
NODE_STATE	VARCHAR	The node's state, one of the following: • UP • DOWN • READY • UNSAFE • SHUTDOWN • SHUTDOWN_ERROR • RECOVERING • RECOVER_ERROR • RECOVERED • INITIALIZING • STANDBY • NEEDS_CATCHUP

The following flow chart details different node states:

Privileges

None

NOTIFIER_ERRORS

Reports errors encountered by notifiers .

Column Name	Data Type	Description
ERROR_TIME	TIMESTAMPTZ	The time that the error occurred.
NODE_NAME	VARCHAR	Name of the node that encountered the error.
NOTIFIER_NAME	VARCHAR	Name of the notifier that triggered the error.
DESCRIPTION	VARCHAR	A description of the error.

Privileges

Superuser

OUTPUT_DEPLOYMENT_STATUS

Contains information about the deployment status of all the projections in your design. Each row contains information about a different projection. Vertica populates this table when you deploy the database design by running the function DESIGNER_RUN_POPULATE_DESIGN_AND_DEPLOY .

Column Name	Column Type	Description
deployment_id	INTEGER	Unique ID that Database Designer assigned to the deployment.
design_name	VARCHAR	Unique name that the user assigned to the design.
deployment_projection_id	INTEGER	Unique ID that Database Designer assigned to the output projection.
deployment_projection_name	VARCHAR	Name that Database Designer assigned to the output projection or the name of the projection to be dropped.
deployment_status	VARCHAR	Status of the deployment: • pending • complete • needs_refresh • in_progress • error
error_message	VARCHAR	Text of any error that occurred when creating or refreshing the specified projection.

OUTPUT_EVENT_HISTORY

Contains information about each stage that Database Designer performs to design and optimize your database design.

Column Name	Data Type	Description
TIME_STAMP	TIMESTAMP	Date and time of the specified stage.
DESIGN_ID	INTEGER	Unique id that Database Designer assigned to the design.
DESIGN_NAME	VARCHAR	Unique name that the user assigned to the design.
STAGE_TYPE	VARCHAR	Design stage that Database Designer was working on at the time indicated by the TIME_STAMP field. Possible values include: • Design in progress • Analyzing data statistics • Optimizing query performance • Optimizing storage footprint • All done • Deployment in progress
ITERATION_NUMBER	INTEGER	Iteration number for the Optimizing query performance stage.
TOTAL_QUERY_COUNT	INTEGER	Total number of design queries in the design.
REMAINING_QUERY_COUNT	INTEGER	Number of design queries remaining for Database Designer to process.
MAX_STEP_NUMBER	INTEGER	Number of steps in the current stage.
CURRENT_STEP_NUMBER	INTEGER	Step in the current stage being processed at the time indicated by the TIME_STAMP field.

CURRENT_STEP_DESCRIPTION	VARCHAR	Name of the step that Database Designer is performing at that time indicated in the TIME_STAMP field. Possible values include: • Design with deployment started • Design in progress: Analyze statistics phase • design_table_name • projection_name • Design in progress: Query optimization phase • Extracting interesting columns • Enumerating sort orders • Setting up projection candidates • Assessing projection candidates • Choosing best projections • Calculating estimated benefit of best projections • Complete • Design in progress: Storage optimization phase • Design completed successfully • Setting up deployment metadata • Identifying projections to be dropped • Running deployment • Deployment completed successfully
TABLE_ID	INTEGER	Unique id that Database Designer assigned to the design table.

Examples

The following example shows the steps that Database Designer performs while optimizing the VMart example database:

```
=> SELECT DESIGNER_CREATE_DESIGN('VMART_DESIGN');
=> SELECT DESIGNER_ADD_DESIGN_TABLES('VMART_DESIGN','public.*');
=> SELECT DESIGNER_ADD_DESIGN_QUERIES('VMART_DESIGN','/tmp/examples/vmart_queries.sql',);
...
=> \x
Expanded display is on.
=> SELECT * FROM OUTPUT_EVENT_HISTORY;

PARTITION_COLUMNS

For each projection of a partitioned table, shows the following information:

- Disk space used by each column per node.
- Statistics that were collected on partition columns

Disk usage

The column DISK_SPACE_BYTES shows how much disk space the partitioned data uses, including deleted data. So, if you delete rows but do not purge them, the DELETED_ROW_COUNT column changes to show the number of deleted rows in each column; however, DISK_SPACE_BYTES remains unchanged. After deleted rows are purged, Vertica,reclaims the disk space: DISK_SPACE_BYTES changes accordingly, and DELETED_ROW_COUNT is reset to 0.

For grouped partitions, PARTITION_COLUMNS shows the cumulative disk space used for each column per grouped partition. The column GROUPED_PARTITION_KEY, if not null, identifies the partition in which a given column is grouped.

Statistics

STATISTICS_TYPE always shows the most complete type of statistics that are available on a given column, irrespective of timestamp. For example, if you collect statistics for a table on all levels— table , partition , and row , STATISTICS_TYPE is set to FULL (table-level), even if partition- and row-level statistics were collected more recently.

Column Name	Data Type	Description

COLUMN_NAME	VARCHAR	Identifies a named column within the partitioned table.
COLUMN_ID	INTEGER	Unique numeric ID assigned by the Vertica, which identifies the column.
TABLE_NAME	VARCHAR	Name of the partitioned table.
PROJECTION_NAME	VARCHAR	Projection name for which information is listed.
PROJECTION_ID	INTEGER	Unique numeric ID assigned by Vertica, which identifies the projection.
NODE_NAME	VARCHAR	Node that hosts partitioned data.
PARTITION_KEY	VARCHAR	Identifies the table partition.
GROUPED_PARTITION_KEY	VARCHAR	Identifies the grouped partition to which a given column belongs.
ROW_COUNT	INTEGER	The total number of partitioned data rows for each column, including deleted rows.
DELETED_ROW_COUNT	INTEGER	Number of deleted partitioned data rows in each column.
DISK_SPACE_BYTES	INTEGER	Amount of space used by partitioned data.
STATISTICS_TYPE	VARCHAR	Specifies what sort of statistics are used for this column, one of the following listed in order of precedence: 1. FULL: Table-level statistics 2. PARTITION: Partition-level statistics 3. ROWCOUNT: Minimal set of statistics and aggregate row counts
STATISTICS_UPDATED_TIMESTAMP	TIMESTAMPTZ	Specifies when statistics of the type specified in STATISTICS_TYPE were collected for this column.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

Examples

Given the following table definition:

```
=> CREATE TABLE messages
(
   time_interval timestamp NOT NULL,
   thread_id varchar(32) NOT NULL,
   unique_id varchar(53) NOT NULL,
   msg_id varchar(65),
   ...
   )
PARTITION BY ((messages.time_interval)::date);
```

a query on partition_columns might return the following (truncated) results:

```
=> SELECT * FROM partition_columns order by table_name, column_name;
column_name | column_id | table_name | projection_name | projection_id     | node_name        | partition_key | grouped_partition_key  | row_count |
deleted_row_count | disk_space_bytes

PARTITION_REORGANIZE_ERRORS

Monitors all background partitioning tasks, and if Vertica encounters an error, creates an entry in this table with the appropriate information. Does not log repartitioning tasks that complete successfully.

Column Name	Data Type	Description
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
USER_NAME	VARCHAR	Name of the user who received the error at the time Vertica recorded the session.

NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
TABLE_NAME	VARCHAR	Name of the partitioned table.
PROJECTION_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the projection.
PROJECTION_NAME	VARCHAR	Projection name for which information is listed.
MESSAGE	VARCHAR	Textual output of the error message.
HINT	VARCHAR	Actionable hint about the error.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

PARTITION_STATUS

For each projection of each partitioned table, shows the fraction of its data that is actually partitioned according to the current partition expression. When the partitioning of a table is altered, the value in PARTITION_REORGANIZE_PERCENT for each of its projections drops to zero and goes back up to 100 when all the data is repartitioned.

Column Name	Data Type	Description
PROJECTION_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the projection.
TABLE_SCHEMA	VARCHAR	Name of the schema that contains the partitioned table.
TABLE_NAME	VARCHAR	Table name that is partitioned.
TABLE_ID	INTEGER	Unique numeric ID assigned by the Vertica, which identifies the table.
PROJECTION_SCHEMA	VARCHAR	Schema containing the projection.
PROJECTION_NAME	VARCHAR	Projection name for which information is listed.
PARTITION_REORGANIZE_PERCENT	INTEGER	For each projection, drops to zero and goes back up to 100 when all the data is repartitioned after the partitioning of a table has been altered. Ideally all rows will show 100 (%).

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

PARTITIONS

Displays partition metadata, one row per partition key, per ROS container.

Column Name	Data Type	Description
PARTITION_KEY	VARCHAR	The partition value(s).
PROJECTION_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the projection.
TABLE_SCHEMA	VARCHAR	The schema name for which information is listed.
PROJECTION_NAME	VARCHAR	The projection name for which information is listed.
ROS_ID	VARCHAR	A unique numeric ID assigned by the Vertica catalog, which identifies the ROS container.

ROS_SIZE_BYTES	INTEGER	The ROS container size in bytes.
ROS_ROW_COUNT	INTEGER	Number of rows in the ROS container.
NODE_NAME	VARCHAR	Node where the ROS container resides.
DELETED_ROW_COUNT	INTEGER	The number of deleted rows in the partition.
LOCATION_LABEL	VARCHAR	The location label of the default storage location.

Notes

- A many-to-many relationship exists between partitions and ROS containers. PARTITIONS displays information in a denormalized fashion.
- To find the number of ROS containers having data of a specific partition, aggregate PARTITIONS over the partition_key column.
- To find the number of partitions stored in a ROS container, aggregate PARTITIONS over the ros_id column.

Examples

See Viewing partition storage data .

PROCESS_SIGNALS

Returns a history of signals that were received and handled by the Vertica process. For details about signals, see the Linux documentation .

Column Name	Data Type	Description
SIGNAL_TIMESTAMP	TIMESTAMPTZ	Time when Vertica recorded the signal.
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
SIGNAL_NUMBER	INTEGER	Signal number, refers to POSIX SIGNAL_NUMBER
SIGNAL_CODE	INTEGER	Signal code.
SIGNAL_PID	INTEGER	Linux process identifier of the signal.
SIGNAL_UID	INTEGER	Process ID of sending process.
SIGNAL_ADDRESS	INTEGER	Address at which fault occurred.

Privileges

Superuser

PROJECTION_RECOVERIES

Retains history about projection recoveries. Because Vertica adds an entry per recovery plan, a projection/node pair might appear multiple times in the output.

> **Note**
> You cannot query this or other system tables during cluster recovery; the cluster must be UP to accept connections.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is recovering or has recovered the corresponding projection.
PROJECTION_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the projection.
PROJECTION_NAME	VARCHAR	Name of the projection that is being or has been recovered on the corresponding node.

TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any. TRANSACTION_ID initializes as NO_TRANSACTION with a value of 0. Vertica will ignore the recovery query and keep (0) if there's no action to take (no data in the table, etc). When no recovery transaction starts, ignored value appears in this table's STATUS column.
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID, STATEMENT_ID uniquely identifies a statement within a session.
METHOD	VARCHAR	Recovery method that Vertica chooses. Possible values are: • incremental • incremental-replay-delete • split • recovery-by-container
STATUS	VARCHAR	Current projection-recovery status on the corresponding node. STATUS can be "queued," which indicates a brief period between the time the query is prepared and when it runs. Possible values are: • queued • running • finished • ignored • error-retry • error-fatal
PROGRESS	INTEGER	An estimate (value in the range [0,100]) of percent complete for the recovery task described by this information. **Note:** The actual amount of time it takes to complete a recovery task depends on a number of factors, including concurrent workloads and characteristics of the data; therefore, accuracy of this estimate can vary. The PROGRESS column value is NULL after the task completes.
DETAIL	VARCHAR	More detailed information about PROGRESS. The values returned for this column depend on the type of recovery plan: • General recovery plans – value displays the estimated progress, as a percent, of the three primary parts of the plan: Scan , Sort, and Write . • Recovery-by-container plans – value begins with CopyStorage: and is followed by the number of bytes copied over the total number of bytes to copy. • Replay delete plans – value begins with Delete: and is followed by the number of deletes replayed over an estimate of the total number of deletes to replay. The DETAIL column value becomes NULL after the recovery plan completes.
START_TIME	TIMESTAMPTZ	Time the recovery task described by this information started.
END_TIME	TIMESTAMPTZ	Time the recovery task described by this information ended.
RUNTIME_PRIORITY	VARCHAR	Determines the amount of runtime resources (CPU, I/O bandwidth) the Resource Manager should dedicate to running queries in the resource pool. Valid values are: • HIGH • MEDIUM • LOW

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

See also

RECOVERY_STATUS

PROJECTION_REFRESHES

System table PROJECTION_REFRESHES records information about refresh operations , successful and unsuccessful. PROJECTION_REFRESHES retains projection refresh data until one of the following events occurs:

- Another refresh operation starts on a given projection.
- CLEAR_PROJECTION_REFRESHES is called and clears data on all projections.
- The table's storage quota is exceeded.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Node where the refresh was initiated.
PROJECTION_SCHEMA	VARCHAR	Name of the projection schema.
PROJECTION_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the projection.
PROJECTION_NAME	VARCHAR	Name of the refreshed projection.
ANCHOR_TABLE_NAME	VARCHAR	Name of the projection's anchor table.
REFRESH_STATUS	VARCHAR	Status of refresh operations for this projection, one of the following: • Queued : Projection is queued for refresh. • Refreshing: Projection refresh is in progress. • Refreshed: Projection refresh is complete. • Failed: Projection refresh failed.
PERCENT_COMPLETE	VARCHAR	Shows the current percentage of completion for the refresh operation. When the refresh is complete, the column is set to NULL.
REFRESH_PHASE	VARCHAR	Indicates how far the refresh has progressed: • Historical: Refresh reached the first phase and is refreshing data from historical data. This refresh phase requires the most amount of time. • Current: Refresh reached the final phase and is attempting to refresh data from the current epoch. To complete this phase, refresh must obtain a lock on the table. If the table is locked by another transaction, refresh is blocked until that transaction completes. The LOCKS system table is useful for determining if a refresh is blocked on a table lock. To determine if a refresh has been blocked, locate the term "refresh" in the transaction description. A refresh has been blocked when the scope for the refresh is REQUESTED and other transactions acquired a lock on the table. This field is NULL until the projection starts to refresh and is NULL after the refresh completes.

REFRESH_METHOD	VARCHAR	Method used to refresh the projection: • Buddy: Projection refreshed from the contents of a buddy projection. This method maintains historical data, so the projection can used for historical queries. • Scratch: Projection refreshed without using a buddy projection. This method does not generate historical data, so the projection cannot participate in historical queries on data that precedes the refresh. • Rebalance: If the projection is segmented, it is refreshed from scratch; if unsegmented, it is refreshed from a buddy projection.
REFRESH_FAILURE_COUNT	INTEGER	Number of times a refresh failed for the projection. REFRESH_FAILURE_COUNT does not indicate whether the projection was eventually refreshed. See REFRESH_STATUS to determine whether the refresh operation is progressing.
SESSION_ID	VARCHAR	Unique numeric ID assigned by the Vertica catalog, which identifies the refresh session.
REFRESH_START	TIMESTAMPTZ	Time the projection refresh started.
REFRESH_DURATION_SEC	INTERVAL SECOND (0)	How many seconds the projection refresh ran.
IS_EXECUTING	BOOLEAN	Differentiates active and completed refresh operations.
RUNTIME_PRIORITY	VARCHAR	Determines how many run-time resources (CPU, I/O bandwidth) the Resource Manager should dedicate to running queries in the resource pool, one of the following: • HIGH • MEDIUM • LOW
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any; otherwise NULL. **Note** The transaction_id is correlated with the execution plan only when refreshing from scratch. When refreshing from a buddy, multiple sub-transactions are created

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

PROJECTION_STORAGE

Monitors the amount of disk storage used by each projection on each node.

> **Note**
> Projections that have no data never have full statistics. Querying this system table lets you see if your projection contains data.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
PROJECTION_ID	VARCHAR	Catalog-assigned numeric value that uniquely identifies the projection.
PROJECTION_NAME	VARCHAR	The projection name for which information is listed.

PROJECTION_SCHEMA	VARCHAR	The name of the schema associated with the projection.
PROJECTION_COLUMN_COUNT	INTEGER	The number of columns in the projection.
ROW_COUNT	INTEGER	The number of rows in the table's projections, including any rows marked for deletion.
USED_BYTES	INTEGER	The number of bytes of disk storage used by the projection.
ROS_COUNT	INTEGER	The number of ROS containers in the projection.
ANCHOR_TABLE_NAME	VARCHAR	The associated table name for which information is listed.
ANCHOR_TABLE_SCHEMA	VARCHAR	The associated table schema for which information is listed.
ANCHOR_TABLE_ID	INTEGER	A unique numeric ID, assigned by the Vertica catalog, which identifies the anchor table.

See also

- PROJECTIONS
- ANALYZE_STATISTICS

PROJECTION_USAGE

Records information about projections Vertica used in each processed query.

Column Name	Data Type	Description
QUERY_START_TIMESTAMP	TIMESTAMPTZ	Value of query at beginning of history interval.
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
USER_NAME	VARCHAR	Name of the user at the time Vertica recorded the session.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
REQUEST_ID	INTEGER	Unique identifier of the query request in the user session.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any; otherwise NULL .
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID, STATEMENT_ID, and REQUEST_ID uniquely identifies a statement within a session.
IO_TYPE	VARCHAR	Input/output.
PROJECTION_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the projection.
PROJECTION_NAME	VARCHAR	Projection name for which information is listed.
ANCHOR_TABLE_ID	INTEGER	Unique numeric ID assigned by the Vertica, which identifies the anchor table.
ANCHOR_TABLE_SCHEMA	VARCHAR	Name of the schema that contains the anchor table.
ANCHOR_TABLE_NAME	VARCHAR	Name of the projection's associated anchor table.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

QUERY_CONSUMPTION

Summarizes execution of individual queries. Columns STATEMENT_ID and TRANSACTION_ID combine as unique keys to these queries. One exception applies: a query with multiple plans has as many records.

Column Name	Data Type	Description
START_TIME END_TIME	TIMESTAMP	Demarcate the start and end of query execution, whether successful or not.
SESSION_ID	VARCHAR	Identifies the session where profiling information was captured. This identifier is unique within the cluster at any point in time, but can be reused when the session closes.
USER_ID	INTEGER	Unique numeric user identifier assigned by the Vertica catalog.
USER_NAME	VARCHAR	User name specified by this query profile.
TRANSACTION_ID	INTEGER	Identifies the transaction in which the query ran.
STATEMENT_ID	INTEGER	Numeric identifier of this query, unique within the query transaction.
CPU_CYCLES_US	INTEGER	Sum, in microseconds, of CPU cycles spent by all threads to process this query.
NETWORK_BYTES_SENT NETWORK_BYTES_RECEIVED	INTEGER	Total amount of data sent/received over the network by execution engine operators.
DATA_BYTES_READ DATA_BYTES_WRITTEN	INTEGER	Total amount of data read/written by storage operators from and to disk, includes all locations: local, HDFS, S3.
DATA_BYTES_LOADED	INTEGER	Total amount of data loaded from external sources: COPY, external tables, and data load.
BYTES_SPILLED	INTEGER	Total amount of data spilled to disk—for example, by SortManager, Join, and NetworkSend operators.
INPUT_ROWS	INTEGER	Number of unfiltered input rows from DataSource and Load operators. INPUT_ROWS shows the number of input rows that the query plan worked with, but excludes intermediate processing. For example, INPUT_ROWS excludes how many times SortManager spilled and read the same row.
INPUT_ROWS_PROCESSED	INTEGER	Value of INPUT_ROWS minus what was filtered by applying query predicates (valindex) and SIPs, and rows rejected by COPY.
PEAK_MEMORY_KB	INTEGER	Peak memory reserved by the resource manager for this query.
THREAD_COUNT	INTEGER	Maximum number of threads opened to process this query.
DURATION_MS	INTEGER	Total wall clock time, in milliseconds, spent to process this query.
RESOURCE_POOL	VARCHAR	Name of the resource pool where the query was executed.
OUTPUT_ROWS	INTEGER	Number of rows output to the client.
REQUEST_TYPE	VARCHAR	Type of query—for example, QUERY or DDL.
LABEL	VARCHAR	Label included as a LABEL hint in this query.
IS_RETRY	BOOLEAN	This query was tried earlier.
SUCCESS	BOOLEAN	This query executed successfully.

QUERY_EVENTS

Returns information about query planning, optimization, and execution events.

Column Name	Data Type	Description
EVENT_TIMESTAMP	TIMESTAMPTZ	Time when Vertica recorded the event.
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
USER_ID	INTEGER	Identifier of the user for the query event.
USER_NAME	VARCHAR	Name of the user for which Vertica lists query information at the time it recorded the session.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
REQUEST_ID*	INTEGER	Unique identifier of the query request in the user session.
TRANSACTION_ID*	INTEGER	Identifier for the transaction within the session, if any; otherwise NULL .
STATEMENT_ID*	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed.
EVENT_CATEGORY	VARCHAR	Category of event: OPTIMIZATION or EXECUTION.
EVENT_TYPE	VARCHAR	Type of event. For details on each type, see the following sections: • Informational Event Types • Event Types for Corrective Action • Critical Event Types
EVENT_DESCRIPTION	VARCHAR	Generic description of the event.
OPERATOR_NAME	VARCHAR	Name of the Execution Engine component that generated the event, if applicable; for example, NetworkSend. Values from the OPERATOR_NAME and PATH_ID columns let you tie a query event back to a particular operator in the query plan. If the event did not come from a specific operator, the OPERATOR_NAME column is NULL.
PATH_ID	INTEGER	Unique identifier that Vertica assigns to a query operation or path in a query plan, NULL if the event did not come from a specific operaton. For more information, see EXECUTION_ENGINE_PROFILES .
OBJECT_ID	INTEGER	Object identifier such as projection or table to which the event refers.
EVENT_DETAILS	VARCHAR	Free-form text describing the specific event.
EVENT_SEVERITY	VARCHAR	Indicates severity of the event with one of the following values: • Informational : No action required • Warning : Remedial action recommended as specified in SUGGESTED_ACTION • Critical : Remedial action required, as specified by SUGGESTED_ACTION
SUGGESTED_ACTION	VARCHAR	Specifies remedial action, recommended or required as indicated by EVENT_SEVERITY .

Informational event types

Event Type	Description

CSE ANALYSIS	The optimizer performed Common subexpressions analysis
CSE ANALYSIS STATS	Time spent on Common subexpressions analysis (msec)
EXPRESSION_EVAL_ERROR	An exception occurred during evaluation of an expression
EXTERNAL_PREDICATE_PUSHDOWN_NOT_SUPPORTED	Predicate pushdown for older Hive versions may not be supported. For more information, see Improving query performance .
FLATTENED SUBQUERIES	Subqueries flattened in FROM clause
GROUP_BY_PREPASS_FALLBACK	Vertica could not run an optimization. In-memory prepass is disabled. The projection may not be optimal.
GROUPBY PUSHDOWN	Internal to Vertica
HIVE_PARTITION_PATH_PRUNED	A path (reported in event details) was pruned by the ORC or Parquet parser.
HIVE_PARTITION_PRUNING	The ORC or Parquet parser pruned partitions. The event reports how many paths were pruned, and HIVE_PARTITION_PATH_PRUNED events record more details.
LibHDFS++ FAILOVER RETRY	Vertica attempted to contact a NameNode on an HDFS cluster that uses High Availability NameNode and did not receive a response. Vertica retried with a different NameNode.
LibHDFS++ MANUAL FALLBACK	Vertica accessed HDFS using the hdfs URL scheme but HDFSUseWebHDFS is set. Vertica fell back to WebHDFS.
LibHDFS++ UNSUPPORTED OPERATION	Vertica accessed HDFS using the hdfs URL scheme, but the HDFS cluster uses an unsupported feature such as wire encryption or HTTPS_ONLY or the Vertica session uses delegation tokens. Vertica fell back to WebHDFS.
MERGE_CONVERTED_TO_UNION	Vertica has converted a merge operator to a union operator due to the sort order of the multi-threaded storage access stream.
MISSING_HIVE_PARTITION	The Parquet parser used loose schema matching to load data and a specified partition column was not found. The parser assigned a value of NULL. The event description includes the name of the missing column.
NO GROUPBY PUSHDOWN	Internal to Vertica
NODE PRUNING	Vertica performed node pruning, which is similar to partition pruning, but at the node level.
ORC_FILE_INFO	A query of ORC files encountered missing information (such as time zone) or an unrecognized ORC version. For missing information, Vertica uses a default value (such as the local time zone).
ORC_SOURCE_PRUNED	An entire ORC file was pruned during predicate pushdown.
ORC_STRIPES_PRUNED	The identified stripes were pruned during predicate pushdown. If an entire ORC file was pruned, it is instead recorded with an ORC_SOURCE_PRUNED event.
OUTER OVERRIDE NOT USED	Vertica found swapping inner/outer tables in a join unnecessary because the inner/outer tables were in good order. (For example, a smaller table was used in an inner join.)
OUTER OVERRIDE USED	For efficiency and optimization, Vertica has swapped the inner/outer tables in a join. Vertica used the smaller table as the inner table.
PARQUET_ROWGROUPS_PRUNED	The identified row groups were pruned during predicate pushdown.

PREDICATES_DISCARDED_FROM_SCAN	Some predicates have been discarded from this scan because expression analysis shows they are not needed.
REJECT_ROWNUMS_HIT_BUFFER_LIMIT	Buffering row numbers during rejection hit buffer limit
SEQUENCE CACHE REFILLED	Vertica has refilled sequence cache.
SIP_FALLBACK	This optimization did not apply to this query type.
SMALL_MERGE_REPLACED	Vertica has chosen a more efficient way to access the data by replacing a merge.
STORAGE_CONTAINERS_ELIMINATED	Vertica has performed partition pruning for the purpose of optimization.
TRANSITIVE PREDICATE	Vertica has optimized by adding predicates to joins where it makes logical sense to do so. For example, for the statement, SELECT * FROM A, B WHERE A.a = B.a AND A.a = 1; Vertica may add a predicate B a = 1 as a filter for better storage access of table B .
TYPE_MISMATCH_COLUMNS_PARQUETPARSER	The Parquet parser used loose schema matching to load data, and could not coerce values in the Parquet data to the types defined for the table. By default the parser rejects the row. For more information, see PARQUET (parser) .
UNMATCHED_TABLE_COLUMNS_PARQUETPARSER	The Parquet parser used loose schema matching to load data, and columns in the table had no corresponding columns in the data. The columns were given values of NULL.
VALUE_TRUNCATED	A character value is too long.
WEBHDFS FAILOVER RETRY	Vertica attempted to contact a NameNode on an HDFS cluster that uses High Availability NameNode and did not receive a response. Vertica retried with a different NameNode.

Warning event types

Review the following event types and recommended actions:

Event Type	**Description**	**Recommended Action**
AUTO_PROJECTION_USED	The optimizer used an auto-projection to process this query.	Create a projection that is appropriate for this query and others like it; consider using Database Designer to generate query-specific projections.
GROUP_BY_SPILLED	This event type is typically related to a specific type of query, which you might need to adjust.	Identify the type of query and make adjustments accordingly. You might need to adjust resource pools, projections, or the amount of RAM available. Try running the query on a cluster with no additional workload.
INVALID COST	When creating a query plan, the optimizer calculated an invalid cost for a path: not-a-number (NaN) value, infinity value, or negative value. The path cost was set to its default value.	No action available to users.
PATTERN_MATCH_NMEE	More than one pattern event is true for a single row	Modify event expressions to ensure that only one event can be true for any row. Alternatively, modify the query using a MATCH clause with ROWS MATCH FIRST EVENT .

PREDICATE OUTSIDE HISTOGRAM	A predicate value you are trying to match does not exist in a set of possible values for a specific column. For example, you try to match a VARCHAR value WHERE mystring = "ABC<newline>". In this case, the newline character throws off the predicate matching optimizations.	Run ANALYZE_STATISTICS on the column.
RESEGMENTED_MANY_ROWS	This event type is typically related to a specific type of query, which you might need to adjust.	Do projections need to be segmented in a different way to allow for join locality? Can you rewrite the query to filter out more rows at storage access time? (Typically, Vertica does so automatically through predicate pushdown.) Review your explain plan.
RLE_OVERRIDDEN	The average run counts are not large enough for Run Length Encoding (RLE). This event occurs with queries where the filtered results for certain columns do not work with RLE because cardinality is less than 10.	Review and rewrite your query, if necessary.

Critical event types

Review the following event types, and resolve issues as recommended:

Event Type	**Description**	**Required Action**
DELETE WITH NON OPTIMIZED PROJECTION	One or more projections do not have your delete filter column in their sort order, causing Vertica difficulty identifying ros to mark as deleted.	Add the delete filter column to the end of every projection sort order for your target delete table.
JOIN_SPILLED	Vertica has spilled a join to disk. A join spill event slows down the subject query and all other queries as it consumes resources while using disk as virtual memory.	Try the following: 1. Review the explain plan. The query might be too ambitious, for example, cross joining two large tables. 2. Consider adding the query to a lower priority pool to reduce impact on other queries. 3. Create projections that allow for a merge join instead of a hash join. 4. Adjust the PLANNEDCONCURRENCYresource pool so that queries have more memory to execute.
MEMORY LIMIT HIT	Indicates query complexity or, possibly, lack of available system memory.	Consider adjusting the MAXMEMORYSIZE and PLANNEDCONCURRENCY resource pools so that the optimizer has sufficient memory. On a heavily used system, this event may occur more frequently.
NO HISTOGRAM	Indicates a table does not have an updated column histogram.	Running the function ANALYZE_STATISTICS most often corrects this issue.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

- QUERY_PLAN_PROFILES

QUERY_METRICS

Monitors the sessions and queries running on each node.

> **Note**
> Totals in this table are reset each time the database restarts.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
ACTIVE_USER_SESSION_COUNT	INTEGER	The number of active user sessions (connections).
ACTIVE_SYSTEM_SESSION_COUNT	INTEGER	The number of active system sessions.
TOTAL_USER_SESSION_COUNT	INTEGER	The total number of user sessions.
TOTAL_SYSTEM_SESSION_COUNT	INTEGER	The total number of system sessions.
TOTAL_ACTIVE_SESSION_COUNT	INTEGER	The total number of active user and system sessions.
TOTAL_SESSION_COUNT	INTEGER	The total number of user and system sessions.
RUNNING_QUERY_COUNT	INTEGER	The number of queries currently running.
EXECUTED_QUERY_COUNT	INTEGER	The total number of queries that ran.

QUERY_PLAN_PROFILES

Provides detailed execution status for queries that are currently running in the system. Output from the table shows the real-time flow of data and the time and resources consumed for each path in each query plan.

Column Name	Data Type	Description
TRANSACTION_ID	INTEGER	An identifier for the transaction within the session if any; otherwise NULL .
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID and STATEMENT_ID uniquely identifies a statement within a session; these columns are useful for creating joins with other system tables.
PATH_ID	INTEGER	Unique identifier that Vertica assigns to a query operation or path in a query plan. Textual representation for this path is output in the PATH_LINE column.
PATH_LINE_INDEX	INTEGER	Each plan path in QUERY_PLAN_PROFILES could be represented with multiple rows. PATH_LINE_INDEX returns the relative line order. You should include the PATH_LINE_INDEX column in the QUERY_PLAN_PROFILES ... ORDER BY clause so rows in the result set appear as they do in EXPLAIN-generated query plans.
PATH_IS_EXECUTING	BOOLEAN	Status of a path in the query plan. True (*t*) if the path has started running, otherwise false.
PATH_IS_COMPLETE	BOOLEAN	Status of a path in the query plan. True (*t*) if the path has finished running, otherwise false.
IS_EXECUTING	BOOLEAN	Status of a running query. True if the query is currently active (*t*), otherwise false (*f*).
RUNNING_TIME	INTERVAL	The amount of elapsed time the query path took to execute.

MEMORY_ALLOCATED_BYTES	INTEGER	The amount of memory the path used, in bytes.
READ_FROM_DISK_BYTES	INTEGER	The number of bytes the path read from disk (or the disk cache).
RECEIVED_BYTES	INTEGER	The number of bytes received over the network.
SENT_BYTES	INTEGER	Size of data sent over the network by the path.
PATH_LINE	VARCHAR	The query plan text string for the path, associated with the PATH ID and PATH_LINE_INDEX columns.

Privileges

Non-superusers see only the records of tables they have permissions to view.

Best practices

Table results can be very wide. For best results when you query QUERY_PLAN_PROFILES , sort on these columns:

- TRANSACTION_ID
- STATEMENT_ID
- PATH_ID
- PATH_LINE_INDEX

For example:

```
=> SELECT ... FROM query_plan_profiles
   WHERE ...
  ORDER BY transaction_id, statement_id, path_id, path_line_index;
```

Examples

See Profiling query plans

- QUERY_EVENTS

QUERY_PROFILES

Provides information about executed queries.

Column Name	Data Type	Description
SESSION_ID	VARCHAR	The identification of the session for which profiling information is captured. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
TRANSACTION_ID	INTEGER	An identifier for the transaction within the session if any; otherwise NULL .
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID , STATEMENT_ID uniquely identifies a statement within a session.
IDENTIFIER	VARCHAR	A string to identify the query in system tables. **Note:** You can query the IDENTIFIER column to quickly identify queries you have labeled for profiling and debugging. See Labeling statements for details.
NODE_NAME	VARCHAR	The node name for which information is listed.

QUERY	VARCHAR	The query string used for the query.
QUERY_SEARCH_PATH	VARCHAR	A list of schemas in which to look for tables.
SCHEMA_NAME	VARCHAR	The schema name in which the query is being profiled, set only for load operations.
TABLE_NAME	VARCHAR	The table name in the query being profiled, set only for load operations.
QUERY_DURATION_US	NUMERIC(18,0)	The duration of the query in microseconds.
QUERY_START_EPOCH	INTEGER	The epoch number at the start of the given query.
QUERY_START	VARCHAR	The Linux system time of query execution in a format that can be used as a DATE/TIME expression.
QUERY_TYPE	VARCHAR	Is one of INSERT , SELECT , UPDATE , DELETE , UTILITY , or UNKNOWN .
ERROR_CODE	INTEGER	The return error code for the query.
USER_NAME	VARCHAR	The name of the user who ran the query.
PROCESSED_ROW_COUNT	INTEGER	The number of rows returned by the query.
RESERVED_EXTRA_MEMORY_B	INTEGER	Shows how much unused memory (in bytes) remains that is reserved for a given query but is unassigned to a specific operator. This is the memory from which unbounded operators pull first. The MEMORY_INUSE_KB column in system table RESOURCE_ACQUISITIONS shows how much total memory was acquired for each query. If operators acquire all memory acquired for the query, the plan must request more memory from the Vertica resource manager .
IS_EXECUTING	BOOLEAN	Displays information about actively running queries, regardless of whether profiling is enabled.

QUERY_REQUESTS

Returns information about user-issued query requests.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
USER_NAME	VARCHAR	Name of the user who issued the query at the time Vertica recorded the session.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
REQUEST_ID	INTEGER	Unique identifier of the query request in the user session.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any; otherwise NULL .
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID, STATEMENT_ID, and REQUEST_ID uniquely identifies a statement within a session.

REQUEST_TYPE	VARCHAR	Type of the query request. Examples include, but are not limited to: • QUERY • DDL • LOAD • UTILITY • TRANSACTION • PREPARE • EXECUTE • SET • SHOW
REQUEST	VARCHAR	Query statement.
REQUEST_LABEL	VARCHAR	Label of the query, if available.
SEARCH_PATH	VARCHAR	Contents of the search path.
MEMORY_ACQUIRED_MB	FLOAT	Memory acquired by this query request in megabytes.
SUCCESS	BOOLEAN	Value returned if the query successfully executed.
ERROR_COUNT	INTEGER	Number of errors encountered in this query request (logged in ERROR_MESSAGES table).
START_TIMESTAMP	TIMESTAMPTZ	Beginning of history interval.
END_TIMESTAMP	TIMESTAMPTZ	End of history interval.
REQUEST_DURATION	TIMESTAMPTZ	Length of time in days, hours, minutes, seconds, and milliseconds.
REQUEST_DURATION_MS	INTEGER	Length of time the query ran in milliseconds.
IS_EXECUTING	BOOLEAN	Distinguishes between actively-running (t) and completed (f) queries.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

QUERY_PROFILES

REBALANCE_OPERATIONS

Contains information on historic and ongoing rebalance operations.

Column Name	Data Type	Description
OBJECT_TYPE	VARCHAR	The type of the rebalanced object: • Projection • DFSfile
OBJECT_ID	INTEGER	The ID of the rebalanced object.
OBJECT_NAME	VARCHAR	The name of the rebalanced object. Objects can be tables, projections, or other Vertica objects.
PATH_NAME	VARCHAR	The DFS path for unstructured data being rebalanced.
TABLE_NAME	VARCHAR	The name of the rebalanced table. This value is NULL for DFS files.
TABLE_SCHEMA	VARCHAR	The schema of the rebalanced table. This value is NULL for DFS files.

TRANSACTION_ID	INTEGER	The identifier for the transaction within the session.
STATEMENT_ID	INTEGER	The unique numeric ID for the currently-running statement.
NODE_NAME	VARCHAR	Name of the rebalancing node.
OPERATION_NAME	VARCHAR	Identifies the specific rebalance operation being performed, one of: • Refresh projection, update temporary projection name and ID to *master projection name* • Drop unsegmented replicas • Replicate DFS File • Refresh projection • Drop replaced or replacement projection, rename *temporary projection name* to *original projection name* • Update temp table segments • Prepare : separate • Move storage containers
OPERATION_STATUS	VARCHAR	Specifies status of the rebalance operation, one of the followin: • START • COMPLETE • ABORT
IS_EXECUTING	BOOLEAN	TRUE: the operation is currently running.

REBALANCE_METHOD	VARCHAR	The method that Vertica is using to perform the rebalance, one of the following:
		• REFRESH: New projections are created according to the new segmentation definition. Data is copied via a refresh plan from projections with the previous segmentation to the new segments. This method is used only in the following cases:
		  ◦ START_REFRESH is called
		  ◦ A configuration parameter is set.
		  ◦ K-safety changes
		• REPLICATE: Unsegmented projection data is copied to new nodes and removed from ephemeral nodes.
		• ELASTIC_CLUSTER: The segmentation of existing segmented projections is altered to adjust to a new cluster topology and data is redistributed accordingly.

SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
OPERATION_START_TIMESTAMP	TIMESTAMPTZ	The time that the rebalance began.
OPERATION_END_TIMESTAMP	TIMESTAMPTZ	The time that the rebalance ended. If the rebalance is ongoing, this value is NULL.
ELASTIC_CLUSTER_VERSION	INTEGER	The Elastic Cluster has a version. Each time the cluster topology changes, this version increments.
IS_LATEST	BOOLEAN	True if this row pertains to the most recent rebalance activity.

Privileges

Superuser

REBALANCE_PROJECTION_STATUS

Maintain history on rebalance progress for relevant projections.

Column Name	Data Type	Description
PROJECTION_ID	INTEGER	Identifier of the projection to rebalance.
PROJECTION_SCHEMA	VARCHAR	Schema of the projection to rebalance.
PROJECTION_NAME	VARCHAR	Name of the projection to rebalance.
ANCHOR_TABLE_ID	INTEGER	Anchor table identifier of the projection to rebalance.
ANCHOR_TABLE_NAME	VARCHAR	Anchor table name of the projection to rebalance.

REBALANCE_METHOD	VARCHAR	Method used to rebalance the projection, one of the following:
		• REFRESH : New projections are created according to the new segmentation definition. Data is copied via a refresh plan from projections with the previous segmentation to the new segments. This method is used only in the following cases:
		  ◦ START_REFRESH is called
		  ◦ A configuration parameter is set.
		  ◦ K-safety changes
		• REPLICATE : Unsegmented projection data is copied to new nodes and removed from ephemeral nodes.
		• ELASTIC_CLUSTER : The segmentation of existing segmented projections is altered to adjust to a new cluster topology and data is redistributed accordingly.

DURATION_SEC	INTERVAL SEC	Deprecated, set to NULL.
SEPARATED_PERCENT	NUMERIC(5,2)	Percent of storage that has been separated for this projection.
TRANSFERRED_PERCENT	NUMERIC(5,2)	Percent of storage that has been transferred, for this projection.
SEPARATED_BYTES	INTEGER	Number of bytes, separated by the corresponding rebalance operation, for this projection.
TO_SEPARATE_BYTES	INTEGER	Number of bytes that remain to be separated by the corresponding rebalance operation for this projection.
TRANSFERRED_BYTES	INTEGER	Number of bytes transferred by the corresponding rebalance operation for this projection.
TO_TRANSFER_BYTES	INTEGER	Number of bytes that remain to be transferred by the corresponding rebalance operation for this projection.
IS_LATEST	BOOLEAN	True if this row pertains to the most recent rebalance activity, where elastic_cluster_version = (SELECT version FROM v_catalog.elastic_cluster);
ELASTIC_CLUSTER_VERSION	INTEGER	The elastic cluster has a version, and each time the cluster topology changes, this version is incremented. This column reflects the version to which this row of information pertains. The TO_* fields (TO_SEPARATE_* and TO_TRANSFER_*) are only valid for the current version. To view only rows from the current, latest or upcoming rebalance operation, use: WHERE elastic_cluster_version = (SELECT version FROM v_catalog.elastic_cluster);

Privileges

Superuser

- ELASTIC_CLUSTER

- REBALANCE_TABLE_STATUS

REBALANCE_TABLE_STATUS

Maintain history on rebalance progress for relevant tables.

Column Name	Data Type	Description
TABLE_ID	INTEGER	Identifier of the table that will be, was, or is being rebalanced.
TABLE_SCHEMA	VARCHAR	Schema of the table that will be, was, or is being rebalanced.
TABLE_NAME	VARCHAR	Name of the table that will be, was, or is being rebalanced.
REBALANCE_METHOD	VARCHAR	Method that will be, is, or was used to rebalance the projections of this table. Possible values are: • REFRESH • REPLICATE • ELASTIC_CLUSTER
DURATION_SEC	INTERVAL SEC	Deprecated - populated by NULL. Aggregate, by table_id, rebalance_method, and elastic_cluster_version, of the same in REBALANCE_PROJECTION_STATUS .
SEPARATED_PERCENT	NUMERIC(5,2)	Aggregate, by table_id, rebalance_method, and elastic_cluster_version, of the same in REBALANCE_PROJECTION_STATUS.
TRANSFERRED_PERCENT	NUMERIC(5,2)	Aggregate, by table_id, rebalance_method, and elastic_cluster_version, of the same in REBALANCE_PROJECTION_STATUS.
SEPARATED_BYTES	INTEGER	Aggregate, by table_id, rebalance_method, and elastic_cluster_version, of the same in REBALANCE_PROJECTION_STATUS.
TO_SEPARATE_BYTES	INTEGER	Aggregate, by table_id, rebalance_method, and elastic_cluster_version, of the same in REBALANCE_PROJECTION_STATUS.
TRANSFERRED_BYTES	INTEGER	Aggregate, by table_id, rebalance_method, and elastic_cluster_version, of the same in REBALANCE_PROJECTION_STATUS.
TO_TRANSFER_BYTES	INTEGER	Aggregate, by table_id, rebalance_method, and elastic_cluster_version, of the same in REBALANCE_PROJECTION_STATUS.
IS_LATEST	BOOLEAN	True if this row pertains to the most recent rebalance activity, where elastic_cluster_version = (SELECT version FROM v_catalog.elastic_cluster;)
ELASTIC_CLUSTER_VERSION	INTEGER	The Elastic Cluster has a version, and each time the cluster topology changes, this version is incremented. This column reflects the version to which this row of information pertains. The TO_* fields (TO_SEPARATE_* and TO_TRANSFER_*) are only valid for the current version. To view only rows from the current, latest or upcoming rebalance operation, use: WHERE elastic_cluster_version = (SELECT version FROM v_catalog.elastic_cluster;)
start_timestamp	TIMESTAMPTZ	The time that the rebalance began.
end_timestamp	TIMESTAMPTZ	The time that the rebalance ended.

Privileges

Superuser

- ELASTIC_CLUSTER
- REBALANCE_PROJECTION_STATUS

RECOVERY_STATUS

Provides the status of recovery operations, returning one row for each node.

> **Note**
> You cannot query this or other system tables table during cluster recovery; the cluster must be UP to accept connections.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
RECOVER_EPOCH	INTEGER	Epoch the recovery operation is trying to catch up to.
RECOVERY_PHASE	VARCHAR	Current stage in the recovery process. Can be one of the following: • NULL • current • historical pass *X* , where *X* is the iteration count
SPLITS_COMPLETED	INTEGER	Number of independent recovery SPLITS queries that have run and need to run.
SPLITS_TOTAL	INTEGER	Total number of SPLITS queries that ran. Each query corresponds to one row in the PROJECTION_RECOVERIES table. If SPLITS_TOTAL = 2, then there should be 2 rows added to PROJECTION_RECOVERIES, showing query details.
HISTORICAL_COMPLETED	INTEGER	Number of independent recovery HISTORICAL queries that have run and need to run.
HISTORICAL_TOTAL	INTEGER	Total number of HISTORICAL queries that ran. Each query corresponds to one row in the PROJECTION_RECOVERIES table. If HISTORICAL_TOTAL = 2, then there should be 2 rows added to PROJECTION_RECOVERIES, showing query details.
CURRENT_COMPLETED	INTEGER	Number of independent recovery CURRENT queries that have run and need to run.
CURRENT_TOTAL	INTEGER	Total number of CURRENT queries that ran. Each query corresponds to one row in the PROJECTION_RECOVERIES table. If CURRENT_TOTAL = 2, then there should be 2 rows added to PROJECTION_RECOVERIES, showing query details.
IS_RUNNING	BOOLEAN	True (*t*) if the node is still running recovery; otherwise false (*f*).

Privileges

None

See also

PROJECTION_RECOVERIES

REMOTE_REPLICATION_STATUS

Provides the status of replication tasks to alternate clusters.

Column Name	Data Type	Description

CURRENT_EPOCH	INTEGER	
EPOCH	INTEGER	
LAST_REPLICATED_TIME	TIMESTAMPTZ	
OBJECTS	VARCHAR	
REPLICATED_EPOCH	INTEGER	
REPLICATION_POINT	VARCHAR	
SNAPSHOT_NAME	VARCHAR	

Privileges

None

REPARENTED_ON_DROP

Lists re-parenting events of objects that were dropped from their original owner but still remain in Vertica. For example, a user may leave the organization and need to be removed from the database. When the database administrator drops the user from the database, that user's objects are re-parented to another user.

In some cases, a Vertica user's objects are reassigned based on the GlobalHeirUsername parameter. In this case, a user's objects are re-parented to the user indicated by this parameter.

Column Name	Data Type	Description
REPARENT_TIMESTAMP	TIMESTAMP	The time the re-parenting event occurred.
NODE_NAME	VARCHAR	The name of the node or nodes on which the re-parenting occurred.
SESSION_ID	VARCHAR	The identification number of the re-parenting event.
USER_ID	INTEGER	The unique, system-generated user identification number.
USER_NAME	VARCHAR	The name of the user that caused the re-parenting event. For example, a dbadmin user may have dropped a user thus re-parenting that user's objects.
TRANSACTION_ID	INTEGER	The system-generated transaction identification number. Is NULL if a transaction id does not exist.
OLD_OWNER_NAME	VARCHAR	The the name of the dropped user who used to own the re-parented object.
OLD_OWNER_OID	INTEGER	The unique identification number of the user who used to own the re-parented object.
NEW_OWNER_NAME	VARCHAR	The name of the user who now owns the re-parented objects.
NEW_OWNER_OID	INTEGER	The unique identification number of the user who now owns the re-parented objects.
OBJ_NAME	VARCHAR	The name of the object being re-parented.
OBJ_OID	INTEGER	The unique identification number of the object being re-parented.
SCHEMA_NAME	VARCHAR	The name of the schema in which the object resides.
SCHEMA_OID	INTEGER	The unique identification number of the schema in which the re-parented object resides.

RESOURCE_ACQUISITIONS

Retains information about resources (memory, open file handles, threads) acquired by each running request. Each request is uniquely identified by its transaction and statement IDs within a given session.

Important
If a request cascades to one or more resource pools beyond the original pool, this table contains multiple records for the same request—one record for each resource pool. The following values are specific to each resource pool:

- Timestamp values: QUEUE_ENTRY_TIMESTAMP , ACQUISITION_TIMESTAMP , and RELEASE_TIMESTAMP
- DURATION_MS
- IS_EXECUTING

You can trace the history of cascade events by querying system table RESOURCE_POOL_MOVE .

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Node name for which information is listed.
TRANSACTION_ID	INTEGER	Transaction identifier for this request.
STATEMENT_ID	INTEGER	Unique numeric ID for each statement within a transaction. NULL indicates that no statement is currently being processed.
REQUEST_TYPE	VARCHAR	Type of request issued to a resource pool. End users always see this column set to Reserve, to indicate that the request is query-specific.
POOL_ID / POOL_NAME	INTEGER / VARCHAR	Each resource pool that participated in handling this request: • POOL_ID : A unique numeric ID assigned by the Vertica catalog that uniquely identifies the resource pool. • POOL_NAME : Name of the resource pool.
THREAD_COUNT	INTEGER	Number of threads in use by this request.
OPEN_FILE_HANDLE_COUNT	INTEGER	Number of open file handles in use by this request.
MEMORY_INUSE_KB	INTEGER	Total amount of memory in kilobytes acquired by this query. Column RESERVED_EXTRA_MEMORY _B in system table QUERY_PROFILES shows how much unused memory (in bytes) remains that is reserved for a given query but is unassigned to a specific operator. If operators for a query acquire all memory specified by MEMORY_INUSE_KB , the plan must request more memory from the Vertica Resource Manager.
QUEUE_ENTRY_TIMESTAMP	TIMESTAMPTZ	Timestamp when the request was queued in this resource pool.
ACQUISITION_TIMESTAMP	TIMESTAMPTZ	Timestamp when the request was admitted to run.
RELEASE_TIMESTAMP	TIMESTAMPTZ	Time when Vertica released this resource acquisition.
DURATION_MS	INTEGER	Duration in milliseconds of request execution. If the request cascaded across multiple resource pools, DURATION_MS applies only to this resource pool.
IS_EXECUTING	BOOLEAN	Set to true if the resource pool is still executing this request. A value of false can indicate one of the following: • The request was completed or denied. • The request cascaded to another resource pool.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

Queue wait time

You can calculate how long a resource pool queues a given request before it begins execution by subtracting QUEUE_ENTRY_TIMESTAMP from ACQUISITION_TIMESTAMP . For example:

```
=> SELECT pool_name, queue_entry_timestamp, acquisition_timestamp,
  (acquisition_timestamp-queue_entry_timestamp) AS 'queue wait'
  FROM V_MONITOR.RESOURCE_ACQUISITIONS WHERE node_name ILIKE '%node0001';
```

See also

- RESOURCE_POOL_STATUS
- RESOURCE_POOLS
- RESOURCE_QUEUES
- RESOURCE_REJECTIONS

RESOURCE_POOL_MOVE

Displays the cascade event information on each node.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Node name for which information is listed.
MOVE_TIMESTAMP	TIMESTAMPTZ	Time when the query attempted to move to the target pool.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
USER_ID	INTEGER	Identifies the query event user.
USER_NAME	VARCHAR	Name of the user for which Vertica lists query information at the time it records the session.
TRANSACTION_ID	INTEGER	Transaction identifier for the request.
STATEMENT_ID	INTEGER	Unique numeric ID for the statement.
SOURCE_POOL_NAME	VARCHAR	Name of the resource pool where the query was executing when Vertica attempted the move.
TARGET_POOL_NAME	VARCHAR	Name of resource pool where the query attempted to move.
MOVE_CAUSE	VARCHAR	Denotes why the query attempted to move. Valid values: • MOVE RESOURCE POOL COMMAND • RUNTIMECAP EXCEEDED
SOURCE_CAP	INTEGER	Effective RUNTIMECAP value for the source pool. The value represents the lowest of these three values: • session RUNTIMECAP • user RUNTIMECAP • source pool RUNTIMECAP

TARGET_CAP	INTEGER	Effective RUNTIMECAP value for the target pool. The value represents the lowest of these three values: • session RUNTIMECAP • user RUNTIMECAP • target pool RUNTIMECAP
SUCCESS	BOOLEAN	True, if the query successfully moved to the target pool.
RESULT_REASON	VARCHAR	States reason for success or failure of the move.

RESOURCE_POOL_STATUS

Provides current state of built-in and user-defined resource pools on each node. Information includes:

- Current memory usage
- Resources requested and acquired by various requests
- Number of queries executing

For general information about resource pools, see Resource pool architecture .

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node for which information is provided.
POOL_OID	INTEGER	Unique numeric ID that identifies the pool and is assigned by the Vertica catalog.
POOL_NAME	VARCHAR	Name of the resource pool.
IS_INTERNAL	BOOLEAN	Denotes whether a pool is built-in .
MEMORY_SIZE_KB	INTEGER	Value of MEMORYSIZE setting of the pool in kilobytes.
MEMORY_SIZE_ACTUAL_KB	INTEGER	Current amount of memory, in kilobytes, allocated to the pool by the resource manager. The actual size can be less than specified in the DDL, if both the following conditions exist: • The pool has been recently altered in a running system. • The request to shuffle memory is pending.
MEMORY_INUSE_KB	INTEGER	Amount of memory, in kilobytes, acquired by requests running against this pool.
GENERAL_MEMORY_BORROWED_KB	INTEGER	Amount of memory, in kilobytes, borrowed from the GENERAL pool by requests running against this pool. The sum of MEMORY_INUSE_KB and GENERAL_MEMORY_BORROWED_KB should be less than MAX_MEMORY_SIZE_KB .
QUEUEING_THRESHOLD_KB	INTEGER	Calculated as MAX_MEMORY_SIZE_KB * 0.95 . When the amount of memory used by all requests against this resource pool exceeds the QUEUEING_THRESHOLD_KB , new requests against the pool are queued until memory becomes available.

MAX_MEMORY_SIZE_KB	INTEGER	Value, in kilobytes, of the MAXMEMORYSIZE parameter as defined for the pool. After this threshold is reached, new requests against this pool are rejected or queued until memory becomes available. **Note** MAX_MEMORY_SIZE_KB might not reflect the set MAXMEMORYSIZE parameter value if the specified value cannot be reached. For example, if MAXMEMORYSIZE = 10G but less than 2G is available, MAX_MEMORY_SIZE_KB will not reflect the original value in KB. Instead, it will display only 2G in KB, as that is the highest value available to it.
MAX_QUERY_MEMORY_SIZE_KB	INTEGER	Value, in kilobytes, of the MAXQUERYMEMORYSIZE parameter as defined for the pool. The resource pool limits this amount of memory to all queries that execute in it.
RUNNING_QUERY_COUNT	INTEGER	Number of queries currently executing in this pool.
PLANNED_CONCURRENCY	INTEGER	Value of PLANNEDCONCURRENCY parameter as defined for the pool.
MAX_CONCURRENCY	INTEGER	Value of MAXCONCURRENCY parameter as defined for the pool.
IS_STANDALONE	BOOLEAN	If the pool is configured to have MEMORYSIZE equal to MAXMEMORYSIZE , the pool is considered standalone because it does not borrow any memory from the General pool.
QUEUE_TIMEOUT	INTERVAL	The interval that the request waits for resources to become available before being rejected. If you set this value to NONE, Vertica displays it as NULL.
QUEUE_TIMEOUT_IN_SECONDS	INTEGER	Value of QUEUETIMEOUT parameter as defined for the pool. If QUEUETIMEOUT is set to NONE, Vertica displays this value as NULL.
EXECUTION_PARALLELISM	INTEGER	Limits the number of threads used to process any single query issued in this resource pool.
PRIORITY	INTEGER	Value of PRIORITY parameter as defined for the pool. When set to HOLD , Vertica sets a pool's priority to -999 so the query remains queued until QUEUETIMEOUT is reached.
RUNTIMECAP_IN_SECONDS	INTEGER	Defined for this pool by parameter RUNTIMECAP , specifies in seconds the maximum time a query in the pool can execute. If a query exceeds this setting, it tries to cascade to a secondary pool.
RUNTIME_PRIORITY	VARCHAR	Defined for this pool by parameter RUNTIMEPRIORITY , determines how the resource manager should prioritize dedication of run-time resources (CPU, I/O bandwidth) to queries already running in this resource pool.
RUNTIME_PRIORITY_THRESHOLD	INTEGER	Defined for this pool by parameter RUNTIMEPRIORITYTHRESHOLD , specifies in seconds a time limit in which a query must finish before the resource manager assigns to it the resource pool's RUNTIME_PRIORITY setting.
SINGLE_INITIATOR	BOOLEAN	Set for backward compatibility.

QUERY_BUDGET_KB	INTEGER	The current amount of memory that queries are tuned to use. The calculation that Vertica uses to determine this value is described in Query budgeting . **Note** The calculated value can change when one or more running queries needs more than the budgeted amount to run. For a detailed example of query budget calculations, see Do You Need to Put Your Query on a Budget? in the Vertica User Community .
CPU_AFFINITY_SET	VARCHAR	The set of CPUs on which queries associated with this pool are executed. Can be: • A percentage of CPUs on the system • A zero-based list of CPUs (a four-CPU system c of CPUs 0, 1, 2, and 3).
CPU_AFFINITY_MASK	VARCHAR	The bit mask of CPUs available for use in this pool, read from right to left. See Examples below.
CPU_AFFINITY_MODE	VARCHAR	The mode for the CPU affinity, one of the following: • ANY • EXCLUSIVE • SHARED

Examples

The following query returns bit masks that show CPU assignments for three user-defined resource pools. Resource pool bigqueries runs queries on CPU 0, ceo_pool on CPU 1, and testrp on CPUs 0 and 1:

```
=> SELECT pool_name, node_name, cpu_affinity_set, cpu_affinity_mode,
    TO_BITSTRING(CPU_AFFINITY_MASK::VARBINARY) "CPU Affinity Mask"
    FROM resource_pool_status WHERE IS_INTERNAL = 'false' order by pool_name, node_name;
 pool_name |    node_name     | cpu_affinity_set | cpu_affinity_mode | CPU Affinity Mask
-----------+------------------+------------------+-------------------+-------------------
 bigqueries | v_vmart_node0001 | 0                | SHARED            | 00110001
 bigqueries | v_vmart_node0002 | 0                | SHARED            | 00110001
 bigqueries | v_vmart_node0003 | 0                | SHARED            | 00110001
 ceo_pool   | v_vmart_node0001 | 1                | SHARED            | 00110010
 ceo_pool   | v_vmart_node0002 | 1                | SHARED            | 00110010
 ceo_pool   | v_vmart_node0003 | 1                | SHARED            | 00110010
 testrp     | v_vmart_node0001 | 0-1              | SHARED            | 00110011
 testrp     | v_vmart_node0002 | 0-1              | SHARED            | 00110011
 testrp     | v_vmart_node0003 | 0-1              | SHARED            | 00110011
(9 rows)
```

RESOURCE_QUEUES

Provides information about requests pending for various resource pools.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The name of the node for which information is listed.
TRANSACTION_ID	INTEGER	Transaction identifier for this request
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID, STATEMENT_ID uniquely identifies a statement within a session.
POOL_NAME	VARCHAR	The name of the resource pool
MEMORY_REQUESTED_KB	INTEGER	Amount of memory in kilobytes requested by this request
PRIORITY	INTEGER	Value of PRIORITY parameter specified when defining the pool.
POSITION_IN_QUEUE	INTEGER	Position of this request within the pool's queue
QUEUE_ENTRY_TIMESTAMP	TIMESTAMP	Timestamp when the request was queued

See also

- RESOURCE_ACQUISITIONS
- RESOURCE_POOLS
- RESOURCE_REJECTIONS

RESOURCE_REJECTION_DETAILS

Records an entry for each resource request that Vertica denies. This is useful for determining if there are resource space issues, as well as which users/pools encounter problems.

Column Name	Data Type	Description
REJECTED_TIMESTAMP	TIMESTAMPTZ	Time when Vertica rejected the resource.
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
USER_NAME	VARCHAR	Name of the user at the time Vertica recorded the session.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
REQUEST_ID	INTEGER	Unique identifier of the query request in the user session.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any; otherwise NULL .
STATEMENT_ID	INTEGER	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID, STATEMENT_ID, and REQUEST_ID uniquely identifies a statement within a session.
POOL_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theresource pool.
POOL_NAME	VARCHAR	Name of the resource pool
REASON	VARCHAR	Reason for rejecting this request; for example: • Usage of single request exceeds high limit • Timed out waiting for resource reservation • Canceled waiting for resource reservation

RESOURCE_TYPE	VARCHAR	Memory, threads, file handles or execution slots. The following list shows the resources that are limited by the resource manager . A query might need some amount of each resource, and if the amount needed is not available, the query is queued and could eventually time out of the queue and be rejected. • Number of running plans • Number of running plans on initiator node (local) • Number of requested threads • Number of requested file handles • Number of requested KB of memory • Number of requested KB of address space **Note:** Execution slots are determined by MAXCONCURRENCY parameter.
REJECTED_VALUE	INTEGER	Amount of the specific resource requested by the last rejection

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

See also

RESOURCE_REJECTIONS

RESOURCE_REJECTIONS

Monitors requests for resources that are rejected by the Resource manager . Information is valid only as long as the node is up and the counters reset to 0 upon node restart.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
POOL_ID	INTEGER	Catalog-assigned integer value that uniquely identifies theresource pool.
POOL_NAME	VARCHAR	Name of the resource pool.
REASON	VARCHAR	Reason for rejecting this request, for example: • Usage of single request exceeds high limit • Timed out waiting for resource reservation • Canceled waiting for resource reservation
RESOURCE_TYPE	VARCHAR	Memory, threads, file handles or execution slots. The following list shows the resources that are limited by the resource manager . A query might need some amount of each resource, and if the amount needed is not available, the query is queued and could eventually time out of the queue and be rejected. • Number of running plans • Number of running plans on initiator node (local) • Number of requested threads • Number of requested file handles • Number of requested KB of memory • Number of requested KB of address space **Note** Execution slots are determined by MAXCONCURRENCY parameter.
REJECTION_COUNT	INTEGER	Number of requests rejected due to specified reason and RESOURCE_TYPE .

FIRST_REJECTED_TIMESTAMP	TIMESTAMPTZ	Time of the first rejection for this pool.
LAST_REJECTED_TIMESTAMP	TIMESTAMPTZ	Time of the last rejection for this pool.
LAST_REJECTED_VALUE	INTEGER	Amount of the specific resource requested by the last rejection.

Examples

```
=> SELECT node_name, pool_name, reason, resource_type, rejection_count AS count, last_rejected_value AS value FROM resource_rejections;
    node_name     | pool_name |           reason            | resource_type | count |  value
------------------+-----------+-----------------------------+---------------+-------+---------
 v_vmart_node0001 | sysquery  | Request exceeded high limit | Memory(KB)    |     1 | 8248449
(1 row)
```

RESOURCE_USAGE

Monitors system resource management on each node.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
REQUEST_COUNT	INTEGER	The cumulative number of requests for threads, file handles, and memory (in kilobytes).
LOCAL_REQUEST_COUNT	INTEGER	The cumulative number of local requests.
REQUEST_QUEUE_DEPTH	INTEGER	The current request queue depth.
ACTIVE_THREAD_COUNT	INTEGER	The current number of active threads.
OPEN_FILE_HANDLE_COUNT	INTEGER	The current number of open file handles.
MEMORY_REQUESTED_KB	INTEGER	The memory requested in kilobytes.
ADDRESS_SPACE_REQUESTED_KB	INTEGER	The address space requested in kilobytes.
ROS_USED_BYTES	INTEGER	The size of the ROS in bytes.
ROS_ROW_COUNT	INTEGER	The number of rows in the ROS.
RESOURCE_REQUEST_REJECT_COUNT	INTEGER	The number of rejected plan requests.
RESOURCE_REQUEST_TIMEOUT_COUNT	INTEGER	The number of resource request timeouts.
RESOURCE_REQUEST_CANCEL_COUNT	INTEGER	The number of resource request cancelations.
DISK_SPACE_REQUEST_REJECT_COUNT	INTEGER	The number of rejected disk write requests.
FAILED_VOLUME_REJECT_COUNT	INTEGER	The number of rejections due to a failed volume.
TOKENS_USED	INTEGER	For internal use only.
TOKENS_AVAILABLE	INTEGER	For internal use only.

SESSION_MARS_STORE

Shows Multiple Active Result Sets (MARS) storage information.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
SESSION_ID	VARCHAR	Identifier of the Vertica session. This identifier is unique within the cluster for the current session but can be reused in a subsequent session.
USER_NAME	VARCHAR	The username used to create the connection.
RESULTSET_ID	INTEGER	Identifier assigned to the result set.
ROW_COUNT	INTEGER	Number of rows requested by the query.
REMAINING_ROW_COUNT	INTEGER	Number of rows that still need to be returned.
BYTES_USED	INTEGER	The number of bytes requested.

SESSION_PARAMETERS

Provides information about user-defined parameters (UDPARAMETERS) set for the current session.

Column Name	Data Type	Description
SESSION_ID	VARCHAR	The unique identifier for the session.
SCHEMA_NAME	VARCHAR	The name of the schema on which the session is running.
LIB_NAME	VARCHAR	The name of the user library running the UDx, if necessary.
LIB_OID	VARCHAR	The object ID of the library containing the function, if one is running.
PARAMETER_NAME	VARCHAR	The name of the session parameter.
CURRENT_VALUE	VARCHAR	The value of the session parameter.

See also

- Configuration parameters
- CONFIGURATION_PARAMETERS

SESSION_PROFILES

Provides basic session parameters and lock time out data. To obtain information about sessions, see Profiling database performance .

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
USER_NAME	VARCHAR	The name used to log in to the database or NULL if the session is internal.
CLIENT_HOSTNAME	VARCHAR	The host name and port of the TCP socket from which the client connection was made; NULL if the session is internal.
LOGIN_TIMESTAMP	TIMESTAMP	The date and time the user logged into the database or when the internal session was created. This field is useful for identifying sessions that have been left open for a period of time and could be idle.

LOGOUT_TIMESTAMP	TIMESTAMP	The date and time the user logged out of the database or when the internal session was closed.
SESSION_ID	VARCHAR	A unique numeric ID assigned by the Vertica catalog, which identifies the session for which profiling information is captured. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
EXECUTED_STATEMENT_SUCCESS_COUNT	INTEGER	The number of successfully run statements.
EXECUTED_STATEMENT_FAILURE_COUNT	INTEGER	The number of unsuccessfully run statements.
LOCK_GRANT_COUNT	INTEGER	The number of locks granted during the session.
DEADLOCK_COUNT	INTEGER	The number of deadlocks encountered during the session.
LOCK_TIMEOUT_COUNT	INTEGER	The number of times a lock timed out during the session.
LOCK_CANCELLATION_COUNT	INTEGER	The number of times a lock was canceled during the session.
LOCK_REJECTION_COUNT	INTEGER	The number of times a lock was rejected during a session.
LOCK_ERROR_COUNT	INTEGER	The number of lock errors encountered during the session.
CLIENT_TYPE	VARCHAR	The type of client from which the connection was made. Possible client type values: • ADO.NET Driver • ODBC Driver • JDBC Driver • vsql
CLIENT_VERSION	VARCHAR	Returns the client version.
CLIENT_OS	VARCHAR	Returns the client operating system.
CLIENT_OS_USER_NAME	VARCHAR	The name of the user that logged into, or attempted to log into, the database. This is logged even when the login attempt is unsuccessful.

See also

LOCKS

SESSIONS

Monitors external sessions. Use this table to perform the following tasks:

- Identify users who are running lengthy queries.
- Identify users who hold locks because of an idle but uncommitted transaction.
- Determine the details of the database security used for a particular session, either Secure Socket Layer (SSL) or client authentication.
- Identify client-specific information, such as client version.

> **Note**
> During session initialization and termination, you might see sessions running only on nodes other than the node on which you ran the virtual table query. This is a temporary situation that corrects itself when session initialization and termination complete.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.

USER_NAME	VARCHAR	The name used to log in to the database or NULL if the session is internal.
CLIENT_HOSTNAME	VARCHAR	The host name and port of the TCP socket from which the client connection was made; NULL if the session is internal. Vertica accepts either IPv4 or IPv6 connections from a client machine. If the client machine contains mappings for both IPv4 and IPv6, the server randomly chooses one IP address family to make a connection. This can cause the CLIENT_HOSTNAME column to display either IPv4 or IPv6 values, based on which address family the server chooses.
CLIENT_PID	INTEGER	The process identifier of the client process that issued this connection. Remember that the client process could be on a different machine than the server.
LOGIN_TIMESTAMP	TIMESTAMP	The date and time the user logged into the database or when the internal session was created. This field can help you identify sessions that have been left open for a period of time and could be idle.
SESSION_ID	VARCHAR	The identifier required to close or interrupt a session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
IDLE_SESSION_TIMEOUT	VARCHAR	Specifies how long this session can remain idle before timing out, set by SET SESSION IDLESESSIONTIMEOUT .
GRACE_PERIOD	VARCHAR	Specifies how long a session socket remains blocked while awaiting client input or output for a given query, set by SET SESSION GRACEPERIOD . If the socket is blocked for a continuous period that exceeds the grace period setting, the server shuts down the socket and throws a fatal error. The session is then terminated.
CLIENT_LABEL	VARCHAR	A user-specified label for the client connection that can be set when using ODBC. See Label in Data source name (DSN) connection properties . An MC output value means there are is a client connection to an MC-managed database for that USER_NAME
TRANSACTION_START	DATE	The date/time the current transaction started or NULL if no transaction is running.
TRANSACTION_ID	INTEGER	A string containing the hexadecimal representation of the transaction ID, if any; otherwise, NULL.
TRANSACTION _DESCRIPTION	VARCHAR	Description of the current transaction.
STATEMENT_START	TIMESTAMP	The timestamp the current statement started execution, or NULL if no statement is running.
STATEMENT_ID	INTEGER	A unique numeric ID assigned by the Vertica catalog, which identifies the currently-executing statement. A value of NULL indicates that no statement is currently being processed.
LAST_STATEMENT_DURATION_US	INTEGER	The duration of the last completed statement in microseconds.
RUNTIME_PRIORITY	VARCHAR	Specifies how many run-time resources (CPU, I/O bandwidth) are allocated to queries that are running in the resource pool.
CURRENT_STATEMENT	VARCHAR	The currently executing statement, if any. NULL indicates that no statement is currently being processed.
LAST_STATEMENT	VARCHAR	NULL if the user has just logged in; otherwise the currently running statement or the most recently completed statement.

SSL_STATE	VARCHAR	Indicates if Vertica used Secure Socket Layer (SSL) for a particular session. Possible values are: • None—Vertica did not use SSL. • Server—Server authentication was used, so the client could authenticate the server. • Mutual—Both the server and the client authenticated one another through mutual authentication. See Security and authentication and TLS protocol .
AUTHENTICATION_ METHOD	VARCHAR	The type of client authentication used for a particular session, if known. Possible values are: • Unknown • Trust • Reject • Hash • Ident • LDAP • GSS • TLS See Security and authentication and Implementing client authentication .
CLIENT_TYPE	VARCHAR	The type of client from which the connection was made. Possible client type values: • ADO.NET Driver • ODBC Driver • JDBC Driver • vsql
CLIENT_VERSION	VARCHAR	Client version.
CLIENT_OS	VARCHAR	Client operating system.
CLIENT_OS_USER _NAME	VARCHAR	The name of the user that logged into, or attempted to log into, the database. This is logged even when the login attempt is unsuccessful.
CLIENT_AUTHENTICATION_NAME	VARCHAR	User-assigned name of the authentication method.
CLIENT_ AUTHENTICATION	INTEGER	Object identifier of the client authentication method.
REQUESTED_PROTOCOL	INTEGER	The requested Vertica client server protocol to be used when connecting.
EFFECTIVE_PROTOCOL	INTEGER	The requested Vertica client server protocol used when connecting.
EXTERNAL_MEMORY_KB	INTEGER	Amount of memory consumed by the Java Virtual Machines associated with the session.

Privileges

A superuser has unrestricted access to all session information. Users can view information only about their own, current sessions.

See also

- CLOSE_SESSION
- CLOSE_ALL_SESSIONS

SPREAD_STATE

Lists spread daemon settings for all nodes in the cluster.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Which node the settings are for.
TOKEN_TIMEOUT	INTEGER	The timeout period in milliseconds before spread considers a node to be down due to lack of response to a message.

Examples

```
=> SELECT * FROM V_MONITOR.SPREAD_STATE;
   node_name     | token_timeout
-----------------+---------------
 v_vmart_node0003 |          8000
 v_vmart_node0001 |          8000
 v_vmart_node0002 |          8000
(3 rows)
```

See also

- Adjusting Spread Daemon timeouts for virtual environments
- SET_SPREAD_OPTION

STORAGE_BUNDLE_INFO_STATISTICS

Indicates which projections have storage containers with invalid bundle metadata in the database catalog. If any ROS or DV container has invalid bundle metadata fields, Vertica increments the corresponding column (ros_without_bundle_info_count or dv_ros_without_bundle_info_count) by one.

To update the catalog with valid bundle metadata, call UPDATE_STORAGE_CATALOG , as an argument to Vertica meta-function DO_TM_TASK . For details, see Writing bundle metadata to the catalog .

Column Name	Data Type	Description
node_name	VARCHAR	Name of this projection's node
projection_oid	INTEGER	Projection's unique catalog identifier
projection_name	VARCHAR	Projection name
projection_schema	VARCHAR	Projection schema name
total_ros_count	INTEGER	Total number of ROS containers for this projection
ros_without_bundle_info_count	INTEGER	Number of ROS containers for this projection with invalid bundle metadata
total_dv_ros_count	INTEGER	Total number of DV (delete vector) containers for this projection
dv_ros_without_bundle_info_count	INTEGER	Number of DV containers for this projection with invalid bundle metadata

STORAGE_CONTAINERS

Monitors information about Vertica storage containers.

Column Name	Data Type	Description
NODE_NAME *	VARCHAR	Node name for which information is listed.
SCHEMA_NAME *	VARCHAR	Schema name for which information is listed.
PROJECTION_ID *	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the projection.

PROJECTION_NAME *	VARCHAR	Projection name for which information is listed on that node.
STORAGE_OID *	INTEGER	Numeric ID assigned by the Vertica catalog, which identifies the storage. The same OID can appear on more than one node.
SAL_STORAGE_ID	VARCHAR	Unique hexadecimal numeric ID assigned by the Vertica catalog, which identifies the storage.
TOTAL_ROW_COUNT *	VARCHAR	Total rows in the storage container listed for that projection.
DELETED_ROW_COUNT *	INTEGER	Total rows in the storage container deleted for that projection.
USED_BYTES *	INTEGER	Total bytes in the storage container listed for that projection.
START_EPOCH *	INTEGER	Number of the start epoch in the storage container for which information is listed.
END_EPOCH *	INTEGER	Number of the end epoch in the storage container for which information is listed.
GROUPING	VARCHAR	The group by which columns are stored: • ALL : All columns are grouped • PROJECTION : Columns grouped according to projection definition • NONE : No columns grouped, despite grouping in the projection definition • OTHER : Some grouping but neither all nor according to projection (e.g., results from add column)
SEGMENT_LOWER_BOUND	INTEGER	Lower bound of the segment range spanned by the storage container or NULL if the corresponding projection is not elastic.
SEGMENT_UPPER_BOUND	INTEGER	Upper bound of the segment range spanned by the storage container or NULL if the corresponding projection is not elastic.
LOCATION_LABEL	VARCHAR (128)	The location label (if any) for the storage container is stored.
DELETE_VECTOR_COUNT	INTEGER	The number of delete vectors in the storage container.
SHARD_ID	INTEGER	Set only for an Eon Mode database, ID of the shard that this container belongs to.
SHARD_NAME	VARCHAR(128)	Set only for an Eon Mode database, name of the shard that this container belongs to.

* Column values cached for faster query performance

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

STORAGE_POLICIES

Monitors the current storage policies in effect for one or more database objects.

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR	Schema name for which information is listed.
OBJECT_NAME	VARCHAR	The name of the database object associated through the storage policy.
POLICY_DETAILS	VARCHAR	The object type of the storage policy.
LOCATION_LABEL	VARCHAR (128)	The label for this storage location.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

See also

- Viewing storage locations and policies
- PARTITIONS
- STORAGE_CONTAINERS
- STORAGE_USAGE

STORAGE_TIERS

Provides information about all storage locations with the same label across all cluster nodes. This table lists data totals for all same-name labeled locations.

The system table shows what labeled locations exist on the cluster, as well as other cluster-wide data about the locations.

Column Name	Data Type	Description
LOCATION_LABEL	VARCHAR	The label associated with a specific storage location. The storage_tiers system table includes data totals for unlabeled locations, which are considered labeled with empty strings ('').
NODE_COUNT	INTEGER	The total number of nodes that include a storage location named location_label .
LOCATION_COUNT	INTEGER	The total number of storage locations named location_label . This value can differ from node_count if you create labeled locations with the same name at different paths on different nodes. For example: **v_vmart_node0001:** Create one labeled location, FAST **V_vmart_node0002** : Create two labeled locations, FAST , at different directory paths In this case, node_count value = 2, while location_count value = 3.
ROS_CONTAINER_COUNT	INTEGER	The total number of ROS containers stored across all cluster nodes for location_label .
TOTAL_OCCUPIED_SIZE	INTEGER	The total number of bytes that all ROS containers for location_label occupy across all cluster nodes.

Privileges

None

See also

- DISK_STORAGE
- STORAGE_POLICIES
- STORAGE_USAGE
- Storage management functions

STORAGE_USAGE

Provides information about file system storage usage. This is useful for determining disk space usage trends.

Column Name	Data Type	Description
POLL_TIMESTAMP	TIMESTAMPTZ	Time when Vertica recorded the row.
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
PATH	VARCHAR	Path where the storage location is mounted.

DEVICE	VARCHAR	Device on which the storage location is mounted.
FILESYSTEM	VARCHAR	File system on which the storage location is mounted.
USED_BYTES	INTEGER	Counter history of number of used bytes.
FREE_BYTES	INTEGER	Counter history of number of free bytes.
USAGE_PERCENT	FLOAT	Percent of storage in use.

Privileges

Superuser

STRATA

Contains internal details of how the Tuple Mover combines ROS containers in each projection, broken down by stratum and classifies the ROS containers by size and partition. The related STRATA_STRUCTURES table provides a summary of the strata values.

Mergeout describes how the Tuple Mover combines ROS containers.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
SCHEMA_NAME	VARCHAR	The schema name for which information is listed.
PROJECTION_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the projection.
PROJECTION_NAME	VARCHAR	The projection name for which information is listed on that node.
STRATUM_KEY	VARCHAR	References the partition or partition group for which information is listed.
STRATA_COUNT	INTEGER	The total number of strata for this projection partition.
MERGING_STRATA_COUNT	INTEGER	The number of strata the Tuple Mover can merge out.
STRATUM_CAPACITY	INTEGER	The maximum number of ROS containers for the stratum before they must be merged.
STRATUM_HEIGHT	FLOAT	The size ratio between the smallest and largest ROS container in this stratum.
STRATUM_NO	INTEGER	The stratum number. Strata are numbered starting at 0, for the stratum containing the smallest ROS containers.
STRATUM_LOWER_SIZE	VARCHAR	The smallest ROS container size allowed in this stratum.
STRATUM_UPPER_SIZE	VARCHAR	The largest ROS container size allowed in this stratum.
ROS_CONTAINER_COUNT	INTEGER	The current number of ROS containers in the projection partition.

STRATA_STRUCTURES

This table provides an overview of Tuple Mover internal details. It summarizes how the ROS containers are classified by size. A more detailed view can be found in the STRATA virtual table.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	The node name for which information is listed.
SCHEMA_NAME	VARCHAR	The schema name for which information is listed.
PROJECTION_NAME	VARCHAR	The projection name for which information is listed on that node.
PROJECTION_ID	INTEGER	Catalog-assigned numeric value that uniquely identifies the projection.
STRATUM_KEY	VARCHAR	References the partition or partition group for which information is listed.
STRATA_COUNT	INTEGER	The total number of strata for this projection partition.
MERGING_STRATA_COUNT	INTEGER	In certain hardware configurations, a high strata could contain more ROS containers than the Tuple Mover can merge out; output from this column denotes the number of strata the Tuple Mover can merge out.
STRATUM_CAPACITY	INTEGER	The maximum number of ROS containers that the strata can contained before it must merge them.
STRATUM_HEIGHT	FLOAT	The size ratio between the smallest and largest ROS container in a stratum.
ACTIVE_STRATA_COUNT	INTEGER	The total number of strata that have ROS containers in them.

Examples

```
=> \pset expanded
Expanded display is on.
=> SELECT node_name, schema_name, projection_name, strata_count,
          stratum_capacity, stratum_height, active_strata_count
          FROM strata_structures WHERE stratum_capacity > 60;

SYSTEM

Monitors the overall state of the database.

Column Name	Data Type	Description
CURRENT_EPOCH	INTEGER	The current epoch number.
AHM_EPOCH	INTEGER	The AHM epoch number.
LAST_GOOD_EPOCH	INTEGER	The smallest (min) of all the checkpoint epochs on the cluster.
REFRESH_EPOCH	INTEGER	Deprecated, always set to -1.
DESIGNED_FAULT_TOLERANCE	INTEGER	The designed or intended K-safety level.
NODE_COUNT	INTEGER	The number of nodes in the cluster.
NODE_DOWN_COUNT	INTEGER	The number of nodes in the cluster that are currently down.

CURRENT_FAULT_TOLERANCE	INTEGER	The number of node failures the cluster can tolerate before it shuts down automatically. This is the current K-safety level.
CATALOG_REVISION_NUMBER	INTEGER	The catalog version number.
ROS_USED_BYTES	INTEGER	The ROS size in bytes (cluster-wide).
ROS_ROW_COUNT	INTEGER	The number of rows in ROS (cluster-wide).
TOTAL_USED_BYTES	INTEGER	The total storage in bytes across the database cluster.
TOTAL_ROW_COUNT	INTEGER	The total number of rows across the database cluster.

SYSTEM_RESOURCE_USAGE

Provides history about system resources, such as memory, CPU, network, disk, I/O.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
END_TIME	TIMESTAMP	End time of the history interval.
AVERAGE_MEMORY_USAGE_PERCENT	FLOAT	Average memory usage in percent of total memory (0-100) during the history interval.
AVERAGE_CPU_USAGE_PERCENT	FLOAT	Average CPU usage in percent of total CPU time (0-100) during the history interval.
NET_RX_KBYTES_PER_SECOND	FLOAT	Average number of kilobytes received from network (incoming) per second during the history interval.
NET_TX_KBYTES_PER_SECOND	FLOAT	Average number of kilobytes transmitting to network (outgoing) per second during the history interval.
IO_READ_KBYTES_PER_SECOND	FLOAT	Disk I/O average number of kilobytes read from disk per second during the history interval.
IO_WRITTEN_KBYTES_PER_SECOND	FLOAT	Average number of kilobytes written to disk per second during the history interval.

Privileges

Superuser

SYSTEM_SERVICES

Provides information about background system services that Workload Analyzer monitors.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
SERVICE_TYPE	VARCHAR	Type of service; can be one of: • SYSTEM • TUPLE MOVER
SERVICE_GROUP	VARCHAR	Group name, if there are multiple services of the same type.

SERVICE_NAME	VARCHAR	Name of the service.
SERVICE_INTERVAL_SEC	INTEGER	How often the service is executed (in seconds) during the history interval.
IS_ENABLED	BOOLEAN	Denotes if the service is enabled.
LAST_RUN_START	TIMESTAMPTZ	Denotes when the service was started last time.
LAST_RUN_END	TIMESTAMPTZ	Denotes when the service was completed last time.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

SYSTEM_SESSIONS

Provides information about system internal session history by system task.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
USER_NAME	VARCHAR	Name of the user at the time Vertica recorded the session.
SESSION_ID	INTEGER	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any. If a session is active but no transaction has begun, TRANSACTION_ID returns NULL.
STATEMENT_ID	VARCHAR	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID and STATEMENT_ID uniquely identifies a statement within a session.
SESSION_TYPE	VARCHAR	Session type, one of: • CLIENT • DBD • MERGEOUT • REBALANCE_CLUSTER • RECOVERY • REFRESH • TIMER_SERVICE • CONNECTION • SUBSESSION • REPARTITION_TABLE • LICENSE_AUDIT • STARTUP • SHUTDOWN • VSPREAD
RUNTIME_PRIORITY	VARCHAR	Specifies how many run-time resources (CPU, I/O bandwidth) are allocated to queries that are running in the resource pool.
DESCRIPTION	VARCHAR	Transaction description in this session.
SESSION_START_TIMESTAMP	TIMESTAMPTZ	Value of session at beginning of history interval.

SESSION_END_TIMESTAMP	TIMESTAMPTZ	Value of session at end of history interval.
IS_ACTIVE	BOOLEAN	Denotes if the session is still running.
SESSION_DURATION_MS	INTEGER	Duration of the session in milliseconds.
CLIENT_TYPE	VARCHAR	Columns not used in SYSTEM_SESSIONS system table. To view values for these columns, see the V_MONITOR schema system tables SESSIONS , USER_SESSIONS , CURRENT_SESSION , and SESSION_PROFILES .
CLIENT_VERSION	VARCHAR	
CLIENT_OS	VARCHAR	
CLIENT_OS_USER_NAME	VARCHAR	The name of the user that logged into, or attempted to log into, the database. This is logged even when the login attempt is unsuccessful.

Privileges

Superuser

TABLE_RECOVERIES

Provides detailed information about recovered and recovering tables during a recovery by table .

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is performing the recovery.
TABLE_NAME	VARCHAR	The name of the table being recovered.
TABLE_OID	INTEGER	The object ID of the table being recovered.
STATUS	VARCHAR	The status of the table. Tables can have the following status: • recovered: The table is fully recovered • recovering: The table is in the process of recovery • error_retry: Vertica has attempted to recover the table, but the recovery failed. Tables that have not yet begun the recovery process do not have a status.
PHASE	VARCHAR	The phase of the recovery .
THREAD_ID	VARCHAR	The ID of the thread that performed the recovery.
START_TIME	TIMESTAMPTZ	The date and time that the table began recovery.
END_TIME	TIMESTAMPTZ	The date and time that the table completed recovery.
RECOVER_PRIORITY	INTEGER	The recovery priority of the table being recovered.
RECOVER_ERROR	VARCHAR	Error that caused the recovery to fail.
IS_HISTORICAL	BOOLEAN	If f , the record contains recovery information for the current process.

Privileges

None

Examples

```
=> SELECT * FROM TABLE_RECOVERIES;
-[RECORD 1]----------------------------------

recover_priority | -9223372036854775807
recover_error    | Could not stop all dirty transactions[txnId = 45035996273718426; ]
is_historical    | t
```

TABLE_RECOVERY_STATUS

Provides node recovery information during a Recovery By Table .

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is performing the recovery.
NODE_RECOVERY_START_TIME	TIMESTAMPTZ	The timestamp for when the node began recovering.
RECOVER_EPOCH	INTEGER	The epoch that the recovery operation is trying to recover to.
RECOVERING_TABLE_NAME	VARCHAR	The name of the table currently recovering.
TABLES_REMAIN	INTEGER	The total number of tables on the node.
IS_RUNNING	BOOLEAN	Indicates if the recovery process is still running.

Privileges

None

Examples

```
=> SELECT * FROM TABLE_RECOVERY_STATUS;
-[ RECORD 1 ]------------+-----------------
node_name                | v_vmart_node0001
node_recovery_start_time |
recover_epoch            |
recovering_table_name    |
tables_remain            | 0
is_running               | f
-[ RECORD 2 ]------------+-----------------
node_name                | v_vmart_node0002
node_recovery_start_time |
recover_epoch            |
recovering_table_name    |
tables_remain            | 0
is_running               | f
-[ RECORD 3 ]------------+-----------------
node_name                | v_vmart_node0003
node_recovery_start_time | 2017-12-13 08:47:28.282377-05
recover_epoch            | 23
recovering_table_name    | user_table
tables_remain            | 5
is_running               | y
```

TABLE_STATISTICS

Displays statistics that have been collected for tables and their respective partitions.

Column Name	Data Type	Description
LOGICAL_STATS_OID	INTEGER	Uniquely identifies a collection of statistics for a given table.
TABLE_NAME	VARCHAR	Name of an existing database table.
MIN_PARTITION_KEY, MAX_PARTITION_KEY	VARCHAR	Statistics for a range of partition keys collected by ANALYZE_STATISTICS_PARTITION , empty if statistics were collected by ANALYZE_STATISTICS .
ROW_COUNT	INTEGER	The number of rows analyzed for each statistics collection.
STAT_COLLECTION_TIME	TIMESTAMPTZ	The timestamp of each statistics collection.

TLS_CONFIGURATIONS

Lists settings for TLS CONFIGURATION objects for the server, LDAP, etc.

Column Name	Data Type	Description
NAME	VARCHAR	Name of the TLS CONFIGURATION object. Vertica includes the following TLS CONFIGURATIONs by default: • server : Client-server TLS. • LDAPLink : TLS when Vertica connects to the LDAP server for LDAP Link and its dry run functions. • LDAPAuth : TLS when a user granted an ldap authentication record attempts to log in and Vertica connects to the LDAP server to attempt a bind. • data_channel : Internode TLS between Vertica nodes.
OWNER	VARCHAR	Owner of the TLS CONFIGURATION object.
CERTIFICATE	VARCHAR	The certificate associated with the TLS CONFIGURATION object.

CA_CERTIFICATES	VARCHAR	The CA certificate(s) used to verify client certificates. In cases where a TLS CONFIGURATION uses more than one CA, each CA will have its own row in the table.
CIPHER_SUITES	VARCHAR	The cipher suites to used to secure the connection.

MODE	VARCHAR	How Vertica establishes TLS connections and handles client certificates, one of the following, in order of ascending security:
		
		• DISABLE : Disables TLS. All other options for this parameter enable TLS.
		• ENABLE : Enables TLS. Vertica does not check client certificates.
		• TRY_VERIFY : Establishes a TLS connection if one of the following is true:
		  ◦ the client presents a valid certificate
		  ◦ the client doesn't present a certificate
		If the client presents an invalid certificate, the connection will use plaintext.
		• VERIFY_CA : Connection succeeds if Vertica verifies that the client certificate is from a trusted CA. Using this TLSMODE forces connections without a client certificate to use plaintext.
		• VERIFY_FULL : Connection succeeds if Vertica verifies that the certificate is from a trusted CA and the certificate's cn (Common Name) or subjectAltName attribute matches the hostname or IP address of the client.
		Note that for client certificates, cn is used for the username, so subjectAltName must match the hostname or IP address of the client.
		
		VERIFY_FULL is unsupported for client-server TLS (the server TLS CONFIGURATION context) and behaves as VERIFY_CA .

Examples

In this example, the LDAPAuth TLS CONFIGURATION uses two CA certificates:

```
=> SELECT * FROM tls_configurations WHERE name='LDAPAuth';
   name   |  owner  | certificate | ca_certificate | cipher_suites |  mode
----------+---------+-------------+----------------+---------------+---------
 LDAPAuth | dbadmin | server_cert | ca             |               | DISABLE
 LDAPAuth | dbadmin | server_cert | ica            |               | DISABLE
(2 rows)
```

To make more clear the relationship between a TLS CONFIGURATION and its CA certificates, you can format the query with LISTAGG :

```
=> SELECT name, owner, certificate, LISTAGG(ca_certificate) AS ca_certificates, cipher_suites, mode
FROM tls_configurations
WHERE name='LDAPAuth'
GROUP BY name, owner, certificate, cipher_suites, mode
ORDER BY 1;
   name   |  owner  | certificate | ca_certificates | cipher_suites |  mode
----------+---------+-------------+-----------------+---------------+---------
 LDAPAuth | dbadmin | server_cert | ca,ica          |               | DISABLE
(1 row)
```

TRANSACTIONS

Records the details of each transaction.

Column Name	Data Type	Description
START_TIMESTAMP	TIMESTAMPTZ	Beginning of history interval.
END_TIMESTAMP	TIMESTAMPTZ	End of history interval.
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.

USER_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the user.
USER_NAME	VARCHAR	Name of the user for which transaction information is listed.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any; otherwise NULL .
DESCRIPTION	VARCHAR	Textual description of the transaction.
START_EPOCH	INTEGER	Number of the start epoch for the transaction.
END_EPOCH	INTEGER	Number of the end epoch for the transaction
NUMBER_OF_STATEMENTS	INTEGER	Number of query statements executed in this transaction.
ISOLATION	VARCHAR	Denotes the transaction mode as "READ COMMITTED" or "SERIALIZABLE".
IS_READ_ONLY	BOOLEAN	Denotes "READ ONLY" transaction mode.
IS_COMMITTED	BOOLEAN	Determines if the transaction was committed. False means ROLLBACK.
IS_LOCAL	BOOLEAN	Denotes transaction is local (non-distributed).
IS_INITIATOR	BOOLEAN	Denotes if the transaction occurred on this node (t).
IS_DDL	BOOLEAN	Distinguishes between a DDL transaction (t) and non-DDL transaction (f).

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

See also

Transactions

TRUNCATED_SCHEMATA

Lists the original names of restored schemas that were truncated due to name lengths exceeding 128 characters.

Column Name	Data Type	Description
RESTORE_TIME	TIMESTAMPTZ	The time that the table was restored.
SESSION_ID	VARCHAR	Identifier for the restoring session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
USER_ID	INTEGER	Identifier of the user for the restore event.
USER_NAME	VARCHAR	Name of the user for which Vertica lists restore information at the time it recorded the session.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any; otherwise NULL.
ORIGINAL_SCHEMA_NAME	VARCHAR	The original name of the schema prior to the restore.
NEW_SCHEMA_NAME	VARCHAR	The name of the schema after it was truncated.

Privileges

None

TUNING_RECOMMENDATIONS

Returns tuning recommendation results from the last call to ANALYZE_WORKLOAD . This information is useful for building filters on the Workload Analyzer result set.

Column Name	Data Type	Description
OBSERVATION_COUNT	INTEGER	Integer for the total number of events observed for this tuning recommendation. For example, if you see a return value of 1, Workload Analyzer is making its first tuning recommendation for the event in 'scope'.
FIRST_OBSERVATION_TIME	TIMESTAMPTZ	Timestamp when the event first occurred. If this column returns a null value, the tuning recommendation is from the current status of the system instead of from any prior event.
LAST_OBSERVATION_TIME	TIMESTAMPTZ	Timestamp when the event last occurred. If this column returns a null value, the tuning recommendation is from the current status of the system instead of from any prior event.
TUNING_PARAMETER	VARCHAR	Objects on which to perform a tuning action. For example, a return value of: • public.t informs the DBA to run Database Designer on table t in the public schema • bsmith notifies a DBA to set a password for user bsmith
TUNING_DESCRIPTION	VARCHAR	Textual description of the tuning recommendation to perform on the tuning_parameter object. For example: • Run database designer on table schema.table • Create replicated projection for table schema.table • Consider incremental design on query • Re-segment projection projection-name on high-cardinality column(s) • Drop the projection projection-name • Alter a table's partition expression • Reorganize data in partitioned table • Decrease the MoveOutInterval configuration parameter setting
TUNING_COMMAND	VARCHAR	Command string if tuning action is a SQL command. For example: Update statistics on a particular schema's table.column: SELECT ANALYZE_STATISTICS('public.table.column'); Resolve mismatched configuration parameter LockTimeout : SELECT * FROM CONFIGURATION_PARAMETERS WHERE parameter_name = 'LockTimeout'; Set the password for user bsmith : ALTER USER (bsmith) IDENTIFIED BY ('new_password');
TUNING_COST	VARCHAR	Cost is based on the type of tuning recommendation and is one of: • LOW : minimal impact on resources from running the tuning command • MEDIUM : moderate impact on resources from running the tuning command • HIGH : maximum impact on resources from running the tuning command Depending on the size of your database or table, consider running high-cost operations after hours instead of during peak load times.

Privileges

Superuser

Examples

See ANALYZE_WORKLOAD .

TUPLE_MOVER_OPERATIONS

Monitors the status of Tuple Mover operations on each node.

Column Name	Data Type	Description
OPERATION_START_TIMESTAMP	TIMESTAMP	Start time of a Tuple Mover operation.
NODE_NAME	VARCHAR	Node name for which information is listed.
OPERATION_NAME	VARCHAR	One of the following operations: • Mergeout • Analyze Statistics
OPERATION_STATUS	VARCHAR	Returns the status of each operation, one of the following: • Empty string: Not running • Start • Running • Complete • Update • Abort • Change plan type to Replay Delete
TABLE_SCHEMA	VARCHAR	Schema name for the specified projection.
TABLE_NAME	VARCHAR	Table name for the specified projection.
PROJECTION_NAME	VARCHAR	Name of the projection being processed.
PROJECTION_ID	INTEGER	Unique numeric ID assigned by the Vertica catalog, which identifies the projection.
COLUMN_ID	INTEGER	Identifier for the column for the associated projection being processed.
EARLIEST_CONTAINER_START_EPOCH	INTEGER	Populated for mergeout and purge operations only. For an automatically-invoked mergeout, for example, the returned value represents the lowest epoch of containers involved in the mergeout.
LATEST_CONTAINER_END_EPOCH	INTEGER	Populated for mergeout and purge_partitions operations. For an automatically-invoked mergeout, for example, the returned value represents the highest epoch of containers involved in the mergeout.
ROS_COUNT	INTEGER	Number of ROS containers.
TOTAL_ROS_USED_BYTES	INTEGER	Size in bytes of all ROS containers in the mergeout operation. (Not applicable for other operations.)

PLAN_TYPE	VARCHAR	One of the following values: • Mergeout • Analyze Statistics • Replay Delete : A marker that the Tuple Mover sets on a container during recovery, to prevent concurrent mergeout.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
TRANSACTION_ID	INTEGER	Identifier for the transaction within the session, if any. If a session is active but no transaction has begun, TRANSACTION_ID returns NULL.
IS_EXECUTING	BOOLEAN	Distinguishes between actively-running (t) and completed (f) tuple mover operations.
RUNTIME_PRIORITY	VARCHAR	Determines how many run-time resources (CPU, I/O bandwidth) the Resource Manager should dedicate to running queries in the resource pool. Valid values are: • HIGH • MEDIUM • LOW

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

Examples

```
=> SELECT node_name, operation_status, projection_name, plan_type
   FROM TUPLE_MOVER_OPERATIONS;
 node_name        | operation_status | projection_name  | plan_type
------------------+------------------+------------------+-----------
 v_vmart_node0001 | Running          | p1_b2            | Mergeout
 v_vmart_node0002 | Running          | p1               | Mergeout
 v_vmart_node0001 | Running          | p1_b2            | Replay Delete
 v_vmart_node0001 | Running          | p1_b2            | Mergeout
 v_vmart_node0002 | Running          | p1_b2            | Mergeout
 v_vmart_node0001 | Running          | p1_b2            | Replay Delete
 v_vmart_node0002 | Running          | p1               | Mergeout
 v_vmart_node0003 | Running          | p1_b2            | Replay Delete
 v_vmart_node0001 | Running          | p1               | Mergeout
 v_vmart_node0002 | Running          | p1_b1            | Mergeout
```

UDFS_EVENTS

Records information about events involving the S3 , HDFS , GCS , and Azure file systems.

Column Name	Data Type	Description
START_TIME	TIMESTAMPTZ	Event start time
END_TIME	TIMESTAMPTZ	Event end time
NODE_NAME	VARCHAR	Name of the node that reported the event

SESSION_ID	VARCHAR	Identifies the event session, unique within the cluster at any point in time but can be reused when the session closes.
USER_ID	INTEGER	Identifies the event user.
TRANSACTION_ID*	INTEGER	Identifies the event transaction within the SESSION_ID-specified session, if any; otherwise NULL.
STATEMENT_ID*	INTEGER	Uniquely identifies the current statement, if any; otherwise NULL.
REQUEST_ID*	INTEGER	Uniquely identifies the event request in the user session.
FILESYSTEM	VARCHAR	Name of the file system, such as S3
PATH	VARCHAR	Complete file path
EVENT	VARCHAR	The function call that was made. For example: virtual size_t SAL::S3FileOperator::read(void*, size_t)
STATUS	VARCHAR	Status of the event: OK, CANCEL, or FAIL
DESCRIPTION	VARCHAR	Other event details, for internal use only
ACTIVITY	VARCHAR	Points to the component that was active and logged the event, for internal use only.
PLAN_ID	VARCHAR	Uniquely identifies the node-specific Optimizer plan for this event.
OPERATOR_ID	INTEGER	Identifier assigned by the Execution Engine operator instance that performs the work

* In combination, TRANSACTION_ID, STATEMENT_ID, and REQUEST_ID uniquely identify an event within a given session.

Privileges
Superuser

UDFS_OPS_PER_HOUR
This table summarizes the S3 file system statistics for each hour.

Column Name	**Data Type**	**Description**
NODE_NAME	VARCHAR	Name of the node the file system is on.
FILESYSTEM	VARCHAR	Name of the file system, such as S3.
START_TIME	TIMESTAMP	Start time for statistics gathering.
END_TIME	TIMESTAMP	Stop time for statistics gathering.
AVG_OPERATIONS_PER_SECOND	INTEGER	Average number of operations per second during the specified hour.
AVG_ERRORS_PER_SECOND	INTEGER	Average number of errors per second during the specified hour.
RETRIES	INTEGER	Number of retry events during the specified hour.
METADATA_READS	INTEGER	Number of requests to write metadata during the specified hour. For example, S3 POST and DELETE requests are metadata writes.
METADATA_WRITES	INTEGER	Number of requests to write metadata during the specified hour. For example, S3 POST and DELETE requests are metadata writes.

DATA_READS	INTEGER	Number of read operations, such as S3 GET requests to download files, during the specified hour.
DATA_WRITES	INTEGER	Number of write operations, such as S3 PUT requests to upload files, during the specified hour.
UPSTREAM_BYTES	INTEGER	Number of bytes received during the specified hour.
DOWNSTREAM_BYTES	INTEGER	Number of bytes sent during the specified hour.

UDFS_OPS_PER_MINUTE

UDFS_OPS_PER_MINUTE

This table summarizes the S3 file system statistics for each minute.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node the file system is on.
FILESYSTEM	VARCHAR	Name of the file system, such as S3.
START_TIME	TIMESTAMP	Start time for statistics gathering.
END_TIME	TIMESTAMP	Stop time for statistics gathering.
AVG_OPERATIONS_PER_SECOND	INTEGER	Average number of operations per second during the specified minute.
AVG_ERRORS_PER_SECOND	INTEGER	Average number of errors per second during the specified minute.
RETRIES	INTEGER	Number of retry events during the specified minute.
METADATA_READS	INTEGER	Number of requests to write metadata during the specified minute. For example, S3 POST and DELETE requests are metadata writes.
METADATA_WRITES	INTEGER	Number of requests to write metadata during the specified minute. For example, S3 POST and DELETE requests are metadata writes.
DATA_READS	INTEGER	Number of read operations, such as S3 GET requests to download files, during the specified minute.

DATA_WRITES	INTEGER	Number of write operations, such as S3 PUT requests to upload files, during the specified minute.
UPSTREAM_BYTES	INTEGER	Number of bytes received during the specified minute.
DOWNSTREAM_BYTES	INTEGER	Number of bytes sent during the specified minute.

UDFS_OPS_PER_HOUR
UDFS_STATISTICS

Records aggregate information about file-system operations. This table records information about the Linux, S3, and WebHDFS file systems, and records information about metadata (but not data) for the Libhdfs++ file system.

An operation can be made up of many individual read, write, or retry requests. SUCCESSFUL_OPERATIONS and FAILED_OPERATIONS count operations; the other counters count individual requests. When an operation finishes, one of the OPERATIONS counters is incremented once, but several other counters could be incremented several times each.

The following query gets the total number of metadata RPCs for Libhdfs++ operations:

```
=> SELECT SUM(metadata_reads) FROM UDFS_STATISTICS WHERE filesystem = 'Libhdfs++';
```

Column Name	Data Type	Description
FILESYSTEM	VARCHAR	Name of the file system, such as S3 or Libhdfs++.
SUCCESSFUL_OPERATIONS	INTEGER	Number of successful file-system operations.
FAILED_OPERATIONS	INTEGER	Number of failed file-system operations.
RETRIES	INTEGER	Number of retry events.
METADATA_READS	INTEGER	Number of requests to read metadata. For example, S3 list bucket and HEAD requests are metadata reads.
METADATA_WRITES	INTEGER	Number of requests to write metadata. For example, S3 POST and DELETE requests are metadata writes.
DATA_READS	INTEGER	Number of read operations, such as S3 GET requests to download files.

DATA_WRITES	INTEGER	Number of write operations, such as S3 PUT requests to upload files.
DOWNSTREAM_BYTES	INTEGER	Number of bytes received.
UPSTREAM_BYTES	INTEGER	Number of bytes sent.
OPEN_FILES	INTEGER	Number of currently-open files on S3 or WebHDFS file systems. This value will be 0 for other file systems.
MAPPED_FILES	INTEGER	Number of currently-mapped files on S3 file systems. This value shows the number of streaming connections for reading data from S3. This value will be 0 for non-S3 file systems.
READING	INTEGER	The number of currently-running read operations from S3 or WebHDFS. This value will be 0 for other file systems.
WRITING	INTEGER	The number of currently-running writer operations to S3 or WebHDFS. This value will be 0 for other file systems.

UDX_EVENTS

Records information about events raised from the execution of user-defined extensions.

A UDx populates the __RAW__ column using ServerInterface::logEvent() (C++ only). VMap support is provided by Flex Tables, which must not be disabled.

Column Name	**Data Type**	**Description**
REPORT_TIME	TIMESTAMPTZ	Time the event occurred.
NODE_NAME	VARCHAR	Name of the node that reported the event
SESSION_ID	VARCHAR	Identifies the event session, unique within the cluster at any point in time but can be reused when the session closes.
USER_ID	INTEGER	Identifies the user running the UDx.
USER_NAME	VARCHAR	Identifies the user running the UDx.
TRANSACTION_ID*	INTEGER	Identifies the event transaction within the SESSION_ID-specified session, if any; otherwise NULL.
STATEMENT_ID*	INTEGER	Uniquely identifies the current statement, if any; otherwise NULL.
REQUEST_ID*	INTEGER	Uniquely identifies the event request in the user session.
UDX_NAME	VARCHAR	Name of the UDx, as specified in the corresponding CREATE FUNCTION statement.
RAW	VARBINARY	VMap containing UDx-specific values.

UDX_FENCED_PROCESSES

Provides information about processes Vertica uses to run user-defined extensions in fenced mode.

Column Name	**Data Type**	**Description**
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.

PROCESS_TYPE	VARCHAR	Indicates what kind of side process this row is for and can be one of the following values: • UDxZygoteProcess — Master process that creates worker side processes, as needed, for queries. There will be, at most, 1 UP UDxZygoteProcess for each Vertica instance. • UDxSideProcess — Indicates that the process is a worker side process. There could be many UDxSideProcesses, depending on how many sessions there are, how many queries, and so on.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
LANGUAGE	VARCHAR	The language of the UDx. For example ' R ' or ' C++ ';
MAX_MEMORY_JAVA_KB	INTEGER	The maximum amount of memory in KB that can be used for the Java heap file on the node.
PID	INTEGER	Linux process identifier of the side process (UDxSideProcess).
PORT	VARCHAR	For Vertica internal use. The TCP port that the side process is listening on.
STATUS	VARCHAR	Set to UP or DOWN, depending on whether the process is alive or not. After a process fails, Vertica restarts it only on demand. So after a process failure, there might be periods of time when no side processes run.

Privileges

None

USER_LIBRARIES

Lists the user libraries that are currently loaded. These libraries contain user-defined extensions (UDxs) that provide additional analytic functions.

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR(8192)	The name of the schema containing the library.
LIB_NAME	VARCHAR(8192)	The name of the library.
LIB_OID	INTEGER	The object ID of the library.
AUTHOR	VARCHAR(8192)	The creator of the library file.
OWNER_ID	INTEGER	The object ID of the library's owner.
LIB_FILE_NAME	VARCHAR(8192)	The name of the shared library file.
MD5_SUM	VARCHAR(8192)	The MD5 checksum of the library file, used to verify that the file was correctly copied to each node. **Note** This use of MD5 is not for cryptographic or authentication purposes. For information on authenticating with MD5 see Hash authentication .
SDK_VERSION	VARCHAR(8192)	The version of the Vertica SDK used to compile the library.
REVISION	VARCHAR(8192)	The revision of the Vertica SDK used to compile the library.

LIB_BUILD_TAG	VARCHAR(8192)	Internal information set by library developer to track the when the library was compiled.
LIB_VERSION	VARCHAR(8192)	The version of the library.
LIB_SDK_VERSION	VARCHAR(8192)	The version of the Vertica SDK intended for use with the library. The developer sets this value manually. This value may differ from the values in the SDK_VERSION and REVISION, which are set automatically during compilation.
SOURCE_URL	VARCHAR(8192)	A URL that contains information about the library.
DESCRIPTION	VARCHAR(8192)	A description of the library.
LICENSES_REQUIRED	VARCHAR(8192)	The licenses required to use the library.
SIGNATURE	VARCHAR(8192)	The signature used to sign the library for validation.
DEPENDENCIES	VARCHAR (8192)	External libraries on which this library depends. These libraries are maintained by Vertica, just like the user libraries themselves.

USER_LIBRARY_MANIFEST

Lists user-defined functions contained in all loaded user libraries.

Column Name	Data Type	Description
SCHEMA_NAME	VARCHAR	The name of the schema containing the function.
LIB_NAME	VARCHAR	The name of the library containing the UDF.
LIB_OID	INTEGER	The object ID of the library containing the function.
OBJ_NAME	VARCHAR	The name of the constructor class in the library for a function.
OBJ_TYPE	VARCHAR	The type of user defined function (scalar function, transform function)
ARG_TYPES	VARCHAR	A comma-delimited list of data types of the function's parameters.
RETURN_TYPE	VARCHAR	A comma-delimited list of data types of the function's return values.

Privileges

None

USER_SESSIONS

Returns user session history on the system.

Column Name	Data Type	Description
NODE_NAME	VARCHAR	Name of the node that is reporting the requested information.
USER_NAME	VARCHAR	Name of the user at the time Vertica recorded the session.
SESSION_ID	VARCHAR	Identifier for this session. This identifier is unique within the cluster at any point in time but can be reused when the session closes.
TRANSACTION_ID	VARCHAR	Identifier for the transaction within the session, if any. If a session is active but no transaction has begun, TRANSACTION_ID returns NULL.

STATEMENT_ID	VARCHAR	Unique numeric ID for the currently-running statement. NULL indicates that no statement is currently being processed. The combination of TRANSACTION_ID and STATEMENT_ID uniquely identifies a statement within a session.
RUNTIME_PRIORITY	VARCHAR	Determines the amount of run-time resources (CPU, I/O bandwidth) the Resource Manager should dedicate to queries already running in the resource pool. Valid values are: • HIGH • MEDIUM • LOW Queries with a HIGH run-time priority are given more CPU and I/O resources than those with a MEDIUM or LOW run-time priority.
SESSION_START_TIMESTAMP	TIMESTAMPTZ	Value of session at beginning of history interval.
SESSION_END_TIMESTAMP	TIMESTAMPTZ	Value of session at end of history interval.
IS_ACTIVE	BOOLEAN	Denotes if the operation is executing.
CLIENT_HOSTNAME	VARCHAR	IP address of the client system
CLIENT_PID	INTEGER	Linux process identifier of the client process that issued this connection. **Note:** The client process could be on a different machine from the server.
CLIENT_LABEL	VARCHAR	User-specified label for the client connection that can be set when using ODBC. See Label in DSN Parameters.
SSL_STATE	VARCHAR	Indicates if Vertica used Secure Socket Layer (SSL) for a particular session. Possible values are: • None – Vertica did not use SSL. • Server – Sever authentication was used, so the client could authenticate the server. • Mutual – Both the server and the client authenticated one another through mutual authentication. See Implementing Security and TLS protocol .
AUTHENTICATION_METHOD	VARCHAR	Type of client authentication used for a particular session, if known. Possible values are: • Unknown • Trust • Reject • Kerberos • Password • MD5 • LDAP • Kerberos-GSS • Ident See Security and authentication and Implementing client authentication .
CLIENT_TYPE	VARCHAR	The type of client from which the connection was made. Possible client type values: • ADO.NET Driver • ODBC Driver • JDBC Driver • vsql

CLIENT_VERSION	VARCHAR	Returns the client version.
CLIENT_OS	VARCHAR	Returns the client operating system.
CLIENT_OS_USER_NAME	VARCHAR	The name of the user that logged into, or attempted to log into, the database. This is logged even when the login attempt is unsuccessful.

Privileges

Non-superuser: No explicit privileges required. You only see records for tables that you have privileges to view.

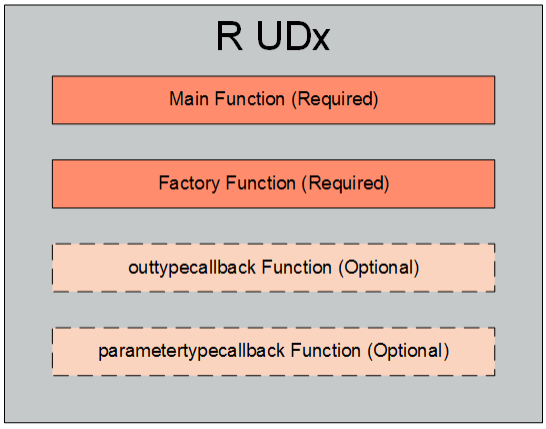
API reference

The Vertica SDK has application programming interfaces (APIs) in the following languages:

- C++ SDK documentation
- Java SDK documentation
- Python SDK documentation
- R SDK

Vertica has the following client API:



- JDBC API

In this section

- C++ SDK
- Java SDK
- R SDK
- Python SDK
- JDBC API

R SDK

Welcome to the Vertica R SDK API Documentation. This documentation covers all of the functions that make up the R SDK. Using this API, you can create User Defined Extensions (UDxs) that integrate your own features into the Vertica Analytics Platform.

To learn how UDxs work and how to develop, compile, and deploy them, see Developing user-defined extensions (UDxs) .

In this section

- Main function
- Factory function
- Outtypecallback function
- Parametertypecallback function

Main function

The first function called when Vertica runs an R user-defined extension (UDx). It must return a data frame and is defined by the name parameter of the factory function.

Example

```
FunctionName <- function(input_data_frame, parameters_data_frame) {
 # Each column from Vertica is turned into a column in the input data frame.
 # This is a brief example of multiplying two columns of the input data frame.
 output_data_frame <- data.frame(input_data_frame[, 1] * input_data_frame[, 2])
 # The function must return a data frame.
 return(output_data_frame)
}
```

Arguments

input_data_frame	The data read by the Vertica user-defined extension (UDx). This input must be a data frame.
parameters_data_frame	The parameters passed to the Vertica user-defined extension (UDx). This input must be a data frame. If you are passing parameters from your Vertica UDx, defined with USING PARAMETERS, then you must included this in your R UDx. If you are not passing parameters to your R UDx, then this can be omitted from your R UDx.

Description

The main function takes as input one data frame as the first argument, and if your UDx accepts parameters, a parameter data frame as the second argument. The main function must return a data frame. The factory function converts the intype argument into a data frame for the main function. For example, intype=c("float","float") is converted by the factory function into a two-dimensional matrix.

The function can call other functions defined in your R UDx library file.

Factory function

The factory function consists of an R list which specifies the parameters of your R user-defined extension (UDx).

Example

```
FunctionNameFactory <- function() {
 list(name                = MainFunctionName,
      udxtype             = c("scalar"),
      intype              = c("float","int", ...),
      outtype             = c("float", ...),
      outtypecallback     = MyReturnTypeFunc,
      parametertypecallback = MyParamReturnFunc,
      volatility          = c("volatile"),
      strictness          = c("called_on_null_input") )
}
```

Arguments

name	The name of the R function in this UDx that is called when the function is invoked by Vertica, and which returns the value(s) back to Vertica.
udxtype	The type of UDx, one of the following: • scalar • transform
intype	Data types of arguments accepted by the function. UDxs support up to 9800 arguments.
outtype	Data types of the arguments returned by the function.

outtypecallback	(Optional) The callback function to call before sending the data back to Vertica, which defines the types and precision that the main function returns.
parametertypecallback	The callback function to send parameter types and names to Vertica. This parameter is required if your UDx is called from Vertica with USING PARAMETERS.
volatility	(Optional) Indicates whether the function returns the same output given the same input, one of the following: • VOLATILE (default) • IMMUTABLE • STABLE For details, see Setting null input and volatility behavior for R functions .
strictness	(Optional) Indicates whether the function always returns NULL when any input argument is NULL, one of the following: • CALLED_ON_NULL_INPUT (default) • RETURN_NULL_ON_NULL_INPUT • STRICT For details, see Setting null input and volatility behavior for R functions .

Description

User-defined functions in R (R UDx) require a factory function for each main R function that you want to call from within Vertica. The factory function encapsulates all the information required by Vertica to load the R UDx.

Outtypecallback function

Function to define the column names, output data types, length/precision, and scale of the data being returned to Vertica.

Example

```
SalesTaxReturnTypes <- function(arguments.data.frame, parameters.data.frame) {
 output.return.type <- data.frame(datatype = rep(NA, 2),
                                  length   = rep(NA, 2),
                                  scale    = rep(NA, 2),
                                  name     = rep(NA, 2))
 output.return.type$datatype <- c("float", "float")
 output.return.type$name <- c("Sales Tax Rate", "Item Cost with Tax")
 return(output.return.type)
}
```

Arguments

arguments.data.frame	Data frame that contains the arguments passed to the UDx from Vertica. This data frame is created and used internally by the UDx process.
parameters.data.frame	Data frame that contains the parameters defined in the UDx from Vertica. This data frame is created and used internally by the UDx process.
datatype	Output data type.
length	(Optional) Dimension of the output.
scale	(Optional) Proportional dimensions of the output.
name	Column name of the output.

Description

When creating the outtypecallback function, define one row for each value returned. Use the same order as in the outtype defined in the factory function. If any columns are left blank or the outtypecallback function is omitted, then Vertica uses default values.

Important
When specifying LONG VARCHAR or LONG VARBINARY data types, include the space between the two words. For example:

```
datatype = c("long varchar")
```

Parametertypecallback function

Function to define the output data type(s), length/precision, and scale of the parameters sent to the main function.

Example

```
FunctionNameParameterTypes <- function() {
 parameters <- list(datatype = c("int", "varchar"),
                    length   = c("NA", "100"),
                    scale    = c("NA", "NA"),
                    name     = c("k", "algorithm"))
 return(parameters)
}
```

Arguments

datatype	The data type of the parameter.
length	(Optional) The dimension of the parameter.
scale	The proportional dimensions of the parameter.
name	The name of the parameter.

Description

When creating the parametertypecallback function, you define one row for each parameter being sent to the function. You must specify a parametertypecallback function if your UDx uses parameters.

The parametertypecallback does not accept any input arguments.

Vertica error messages

Welcome to the Vertica Error Codes guide. This guide is mainly for developers who need to understand how Vertica's error codes relate to error states returned by the ODBC and JDBC drivers.

The different ways Vertica reports errors

Vertica reports warnings and errors via two different mechanisms: SQLSTATEs and error messages. SQLSTATEs are intended for use by client applications, such as those accessing Vertica via ODBC or JDBC. Error messages are displayed to interactive users (for example, users connected to Vertica through vsql) and written to error logs.

About SQLSTATE

Vertica reports the success or failure of each statement it executes to client applications using a five-character SQLSTATE value. Many of these values are defined by the SQL standard. Others (identified by the letter "V" in their values) are Vertica-specific.

SQLSTATE values are grouped into classes which are defined by the first two characters in the SQLSTATE value. The last three characters indicate a specific condition within a class. For example, the SQLSTATE class 22 represents all data errors. The specific SQLSTATE value 22012 represents a division by zero error. SQLSTATE classes let an application that does not recognize a specific SQLSTATE value to still get a general idea of the result.

Warning and error messages

Each error and warning message displayed to interactive users or written to a log file by Vertica has its own numeric error code assigned to it. For example:

```
ERROR 3117: Division by zero
WARNING 4098: No projections found
ERROR 5617: Multiple WITH clauses not allowed
```

The error code number is not related to the SQLSTATE value. However, error and warning messages do correspond to a specific SQLSTATE. They are just a more-specific human-readable message compared to the SQLSTATE, which is mainly intended for client applications.

For example, all warning messages displayed by Vertica correspond to the SQLSTATE class 01. The warning message "WARNING 3084: Design Workspace couldn't be dropped" corresponds to the SQLSTATE value 01000 ERRCODE_WARNING.

Error codes do not change between Vertica releases, but individual error and warning messages may be added or removed in new releases. Your client application should not depend on particular error code appearing from one release to the next. Instead, it should use the SQLSTATE value to determine the result of executing a statement.

See the SQL state list for a list of all the SQLSTATE classes and values defined by Vertica. This table also links to lists of error or warning messages that are associated with each SQLSTATE value.

In this section

- SQL state list

SQL state list

The following table lists the SQLSTATE classes and individual SQLSTATE codes.

SQLState	Description	Details
Class 00—Successful Completion		
00000	SUCCESSFUL_COMPLETION	associated error messages
Class 01—Warning		
01000	WARNING	associated warning messages
01003	WARNING_NULL_VALUE_ELIMINATED_IN_SET_FUNCTION	
01004	WARNING_STRING_DATA_RIGHT_TRUNCATION	associated warning messages
01006	WARNING_PRIVILEGE_NOT_REVOKED	associated warning messages
01007	WARNING_PRIVILEGE_NOT_GRANTED	associated warning messages
01008	WARNING_PRIVILEGE_ALREADY_GRANTED	
01009	WARNING_PRIVILEGE_ALREADY_REVOKED	associated warning messages
0100C	WARNING_DYNAMIC_RESULT_SETS_RETURNED	
01V01	WARNING_DEPRECATED_FEATURE	associated warning messages
01V02	WARNING_QUERY_RETRIED	
Class 02—No Data		
02000	NO_DATA	associated error messages
02001	NO_ADDITIONAL_DYNAMIC_RESULT_SETS_RETURNED	
Class 03—SQL Statement Not Yet Complete		
03000	SQL_STATEMENT_NOT_YET_COMPLETE	

Class 08—Client Connection Exception		
08000	CONNECTION_EXCEPTION	associated error messages
08001	SQLCLIENT_UNABLE_TO_ESTABLISH_SQLCONNECTION	associated error messages
08003	CONNECTION_DOES_NOT_EXIST	associated error messages
08004	SQLSERVER_REJECTED_ESTABLISHMENT_OF_SQLCONNECTION	associated error messages
08006	CONNECTION_FAILURE	associated error messages
08007	TRANSACTION_RESOLUTION_UNKNOWN	
08V01	PROTOCOL_VIOLATION	associated error messages
Class 09—Triggered Action Exception		
09000	TRIGGERED_ACTION_EXCEPTION	associated error messages
Class 0A—Feature Not Supported		
0A000	FEATURE_NOT_SUPPORTED	associated error messages
0A005	PLAN_TO_SQL_NOT_SUPPORTED	associated error messages
Class 0B—Invalid Transaction Initiation		
0B000	INVALID_TRANSACTION_INITIATION	associated error messages
Class 0F—Locator Exception		
0F000	LOCATOR_EXCEPTION	
0F001	L_E_INVALID_SPECIFICATION	
Class 0L—Invalid Grantor		
0L000	INVALID_GRANTOR	
0LV01	INVALID_GRANT_OPERATION	associated error messages
Class 0P—Invalid Role Specification		
0P000	INVALID_ROLE_SPECIFICATION	
Class 20—Case Not Found		
20000	CASE_NOT_FOUND	associated error messages
Class 21—Cardinality Violation		
21000	CARDINALITY_VIOLATION	associated error messages
Class 22—Data Exception		
22000	DATA_EXCEPTION	associated error messages
22001	STRING_DATA_RIGHT_TRUNCATION	associated error messages

22002	NULL_VALUE_NO_INDICATOR_PARAMETER	
22003	NUMERIC_VALUE_OUT_OF_RANGE	associated error messages
22004	NULL_VALUE_NOT_ALLOWED	associated error messages
22005	ERROR_IN_ASSIGNMENT	
22007	INVALID_DATETIME_FORMAT	associated error messages
22008	DATETIME_FIELD_OVERFLOW	associated error messages
22009	INVALID_TIME_ZONE_DISPLACEMENT_VALUE	associated error messages
2200B	ESCAPE_CHARACTER_CONFLICT	associated error messages
2200C	INVALID_USE_OF_ESCAPE_CHARACTER	
2200D	INVALID_ESCAPE_OCTET	associated error messages
2200F	ZERO_LENGTH_CHARACTER_STRING	
2200G	MOST_SPECIFIC_TYPE_MISMATCH	
22010	INVALID_INDICATOR_PARAMETER_VALUE	
22011	SUBSTRING_ERROR	associated error messages
22012	DIVISION_BY_ZERO	associated error messages
22015	INTERVAL_FIELD_OVERFLOW	associated error messages
22018	INVALID_CHARACTER_VALUE_FOR_CAST	
22019	INVALID_ESCAPE_CHARACTER	associated error messages
2201B	INVALID_REGULAR_EXPRESSION	associated error messages
2201E	INVALID_ARGUMENT_FOR_LOG	
2201F	INVALID_ARGUMENT_FOR_POWER_FUNCTION	
2201G	INVALID_ARGUMENT_FOR_WIDTH_BUCKET_FUNCTION	associated error messages
22020	INVALID_LIMIT_VALUE	
22021	CHARACTER_NOT_IN_REPERTOIRE	associated error messages
22022	INDICATOR_OVERFLOW	
22023	INVALID_PARAMETER_VALUE	associated error messages
22024	UNTERMINATED_C_STRING	
22025	INVALID_ESCAPE_SEQUENCE	associated error messages
22026	STRING_DATA_LENGTH_MISMATCH	
22027	TRIM_ERROR	

2202E	ARRAY_ELEMENT_ERROR	
22906	NONSTANDARD_USE_OF_ESCAPE_CHARACTER	associated error messages
22V01	FLOATING_POINT_EXCEPTION	
22V02	INVALID_TEXT_REPRESENTATION	associated error messages
22V03	INVALID_BINARY_REPRESENTATION	associated error messages
22V04	BAD_COPY_FILE_FORMAT	associated error messages
22V05	UNTRANSLATABLE_CHARACTER	
22V0B	ESCAPE_CHARACTER_ON_NOESCAPE	associated error messages
22V21	INVALID_EPOCH	associated error messages
22V23	RAISE_EXCEPTION	associated error messages
22V24	COPY_PARSE_ERROR	associated error messages
Class 23—Integrity Constraint Violation		
23000	INTEGRITY_CONSTRAINT_VIOLATION	
23001	RESTRICT_VIOLATION	
23502	NOT_NULL_VIOLATION	associated error messages
23503	FOREIGN_KEY_VIOLATION	associated error messages
23505	UNIQUE_VIOLATION	associated error messages
23514	CHECK_VIOLATION	associated error messages
Class 24—Invalid Cursor State		
24000	INVALID_CURSOR_STATE	
Class 25—Invalid Transaction State		
25000	INVALID_TRANSACTION_STATE	associated error messages

Messages associated with SQLSTATE 01000

This topic lists the messages associated with the SQLSTATE 01000.

SQLSTATE 01000 description

WARNING

Messages associated with this SQLState

Error messages

ERROR 5922: Insufficient privileges to alter table *string*

Notice messages

NOTICE 2005: *string*
NOTICE 2519: Cannot shut down while users are connected
NOTICE 2690: Compression hint specified for column '*string*' does nothing
because column is GROUPED
NOTICE 3175: Encoding requested for column '*string*' does nothing
NOTICE 3512: Ignoring data path, change unsupported
NOTICE 4927: The *string string* depends on *string*
NOTICE 4929: The *string* [*string*] depends on *string*
NOTICE 5748: API limitation: affinities will be set only for the first
value (out of *value*) CPUs
NOTICE 6008: Resetting CPU affinity set for resource pool *string* to the
default (ANY)
NOTICE 6182: Cannot shut down while DBD sessions are running
NOTICE 7090: Cannot set affinity set for resource pool '*string*' because
the affinity mode is ANY
NOTICE 7338: The column "*string*" of table "*string*" is referenced by table
"*string*", column "*string*"
NOTICE 8689: *value* objects could not be re-parented
NOTICE 9088: Omitting rest of dependent objects, overall *value* objects
depending on *string*
NOTICE 9503: The *string* [*value*] depends on *string*

Warning messages

WARNING 2005: *string*
WARNING 2362: Cannot begin transaction; transaction is already running
WARNING 3084: Design couldn't be dropped
WARNING 3152: Duplicate values in columns marked as UNIQUE will now be
ignored for the remainder of your session or until
reenable_duplicate_key_error() is called
WARNING 3372: Failed to disable profiling: *string*
WARNING 3373: Failed to enable profiling: *string*
WARNING 3539: Incorrect results are possible. Please contact Vertica
Support if unsure
WARNING 3791: Invalid view *string*: *string*
WARNING 4071: NO COMMIT option will be ignored for external table "*string*"
WARNING 4088: No new valid default roles specified. Retaining previous
set of default roles for user *string*
WARNING 4098: No projections found
WARNING 4102: No rows are inserted into table "*string*"."*string*" because ON
COMMIT DELETE ROWS is the default for create temporary
table
WARNING 4116: No super projections created for table *string.*
WARNING 4246: Only GLOBAL scope is supported for clearing *string* profiles
WARNING 4463: Projection *string* is not up to date
WARNING 4468: Projection <*string*> is not available for query processing.
Execute the select start_refresh() function to copy data
into this projection.

The projection must have a sufficient number of buddy
projections and all nodes must be up before starting a
refresh
WARNING 4539: Received no response from *stringstring*
WARNING 4792: Storage option "*string*" will be ignored for external table
"*string*"
WARNING 4871: System view *string* for tuning rule *string* is currently invalid
WARNING 4873: System view for tuning rule *string* does not exist
WARNING 4996: This request may deadlock the system. Please report the
details to technical support
WARNING 5068: Total declared length of columns of one of the
constraints exceeds the limit, truncation may happen

WARNING 5119: UDx code didn't respond when Vertica tried to get function prototype for *string* in library *string*: *string*
WARNING 5448: View *string* is currently invalid
WARNING 5451: Violations of some of foreign key constraints may not be reported because of no privilege on the foreign tables
WARNING 5642: Projection *string* is not persistent or not up to date; it will not be copied
WARNING 5717: No statistics has been exported. Either the DB is empty or you try to export an external table or you do not have access to the available objects
WARNING 5724: Segmentation clause contains a *string* - data loads may be slowed significantly
WARNING 5727: Sort clause contains a *string* - data loads may be slowed significantly
WARNING 5741: View *string* depends on other relations
WARNING 5819: Design could not be reset
WARNING 5821: Detected keys sharing the same case-insensitive key name
WARNING 5860: Due to the data isolation of temp tables with an on-commit-delete-rows policy, the compute_flextable_keys() and compute_flextable_keys_and_build_view() functions cannot access this table's data. The build_flextable_view() function can be used with a user-provided keys table to create a view, but involves a DDL commit which will delete the table's rows
WARNING 5873: Failed to add table *string* of hcatalog schema *string* to catalog: *string*
WARNING 5875: Failed to alter table *string* of hcatalog schema *string* to catalog: *string*
WARNING 5880: Failed to describe table *string* in hcatalog database *string*: *string*
WARNING 5881: Failed to describe table *string* in schema *string*: HCatalog database *string* does not exist
WARNING 5884: Failed to list hcatalog tables of hcatalog schema *string*: *string*
WARNING 5886: Failed to mirror table *string* in schema *string*: *string*
WARNING 5909: Found and ignored keys with names longer than the maximum column-name length limit
WARNING 5912: HASH() arguments contain expressions that reference table columns
WARNING 5917: Ignored some keys since the total key count exceeds the view column limit
WARNING 5922: Insufficient privileges to alter table *string*
WARNING 5923: Insufficient privileges to drop table *string*
WARNING 5991: Projection basename "*string*" hint was ignored. "*string*" is used as the basename
WARNING 5993: Projection is irregularly segmented by column
WARNING 6053: The view creation involved a DDL commit which deleted the table's rows
WARNING 6256: Error while analyzing constraint(s) *string* on *string*
WARNING 6257: Error while creating LTT for analyzing constraints on *string*
WARNING 6356: No partitions have been swapped. Neither table has partitions fall in range
WARNING 6417: Swapped partitions are not immediately moved to a new storage location
WARNING 6515: Projection with name "*string*" already exists in schema "*string*" for anchor table "*string*.*string*"
WARNING 6565: Inequal query trees produced the same hash code query1:

string

query2:

string

WARNING 6594: Unknown RangeTblEntry:*value*
WARNING 6608: *string* is an invalid argument for hint *string*
WARNING 6765: Error parsing distrib value *string* in Distrib hint's arguments. The whole hint will be ignored
WARNING 6773: Failed to compare plans for query '*string*'
WARNING 6797: Hint *string* can accept at most one argument, the hint with *value* arguments is ignored
WARNING 6798: Hint *string* can be specified only once for each join, if multiple instances listed only the first is considered
WARNING 6799: Hint *string* is not feasible and will be ignored
WARNING 6800: Hint *string* must have one argument
WARNING 6801: Hint *string* requires exactly two arguments, the hint with *value* arguments is ignored
WARNING 6813: Inherited privileges are globally disabled; schema parameter is set but has no effect
WARNING 6814: Inherited privileges are globally disabled; table parameter is set but has no effect
WARNING 6815: Inherited privileges are globally disabled; view parameter is set but has no effect
WARNING 6818: Input operations specified for Hint *string* is not feasible and will be ignored
WARNING 6922: Projection name was changed to *string* because it conflicts with the basename of the table *string*
WARNING 6990: Text index has invalid tokenizer
WARNING 6991: The active saved plan for this query has incompatible output column set. Continuing with the original query
WARNING 7000: The projection '*string*' was used to enforce the enabled key constraint '*string*', and may be regenerated to validate a DML statement on the base table
WARNING 7020: Unable to find the following query in the export file: '*string*'
WARNING 7030: Unexpected group clause found during query comparison
WARNING 7031: Unexpected group clause found during query hashing
WARNING 7033: Unexpected sort clause found during query comparison
WARNING 7036: Unknown Expr:*value* during query comparison
WARNING 7037: Unknown Expr:*value* found
WARNING 7038: Unknown Expr:*value* found during query hashing
WARNING 7039: Unknown Inequality OpOid:*value* found during query hashing
WARNING 7040: Unknown Logic OpExpr:*value* found during query comparison
WARNING 7041: Unknown Logic OpExpr:*value* found during query hashing
WARNING 7044: Unknown OpExpr:*value* found during query comparison
WARNING 7045: Unknown OpExpr:*value* found during query hashing
WARNING 7046: Unknown RangeTblEntry:*value* found during query comparison
WARNING 7047: Unknown RangeTblEntry:*value* found during query hashing
WARNING 7048: Unknown Sublink:*value* found during query comparison
WARNING 7049: Unknown Sublink:*value* found during query hashing
WARNING 7052: Unsupported JoinExpr Type found during query comparison
WARNING 7053: Unsupported JoinExpr Type found during query hashing
WARNING 7070: View "*string*" will include privileges from schema "*string*"
WARNING 7074: You appear to be using an old version of HDFS that may have stability problems under high load. See the Vertica documentation for supported HDFS versions
WARNING 7186: Inherited privileges are globally disabled. Privileges will be materialized and visibility of table *string* may change
WARNING 7265: Inherited privileges are globally disabled. Privileges will be materialized and visibility of view *string* may change
WARNING 7709: Could not drop table '*string*'. Please remove manually if necessary.

Detail: *string*
WARNING 7752: Cannot make a local query plan for "try local" hint, please check hash function, segment quantity, segment boundary, etc
WARNING 7793: The cache will be set to 1 instead
WARNING 7942: Unknown expression found during hashing: *value*
WARNING 7994: Not converged before max_iterations [*value*]
WARNING 8012: The parameter [*string*] is not defined for this function
WARNING 8086: Encoding option specified for attribute (*string*) of external table (*string*) will be ignored
WARNING 8275: The following shards missed the *string* due to missing primary subscriber (probably down): *string*
WARNING 8343: Not converged before max_iterations *value*
WARNING 8413: Lambda provided without regularization type: default for regularization is [*string*]; lambda will have no effect
WARNING 8414: max_depth is set to *value* while max_breadth to *value*. This means the size of trees may become limited by *string* first
WARNING 8419: Parameters [*string*] are not supported for optimizer [*string*], only for [*string*]
WARNING 8506: CGD optimizer could not invert covariance matrix which is required for calculating statistics. Coefficients are not affected
WARNING 8526: Regularization type [*string*] may cause optimizer [*string*] to not converge
WARNING 8531: *string* Directory for errors files was not created.

Unable to write errors for this instance of COPY command
WARNING 8547: Not converged before maximum inner iterations *value*
WARNING 8557: Feature *string* not applicable in Eon mode
WARNING 8580: Failed to convert internal form to readable form: *string*
WARNING 8581: Failed to convert to internal form: *string*
WARNING 8582: Failed to describe hcatalog tables of hcatalog schema *string*: *string*
WARNING 8583: Given lambda value [*value*] will result in all zero coefficients; use a value lower than lambda max for this dataset [*value*]
WARNING 8602: Caught exception while parsing JSON
WARNING 8621: The following string provided is not valid JSON: *string*
WARNING 8704: This table is not partitioned. Ignore activePartitionCount changes
WARNING 8737: The meta function set_recover_by_table is disabled in 9.1SP1. set_recover_test_settings() is supposed to be used only for testing purpose by developers
WARNING 8818: Library and dependencies have a combined size of *value* GB,
WARNING 8841: Consider enabling MergeOutCache when reflexive mergeout is disabled. Otherwise background TM Mergeout service may affect the query performance
WARNING 8953: Hint ECSMode is not feasible and will be ignored
WARNING 9002: Setting the token timeout greater than *value* msec may severely decrease cluster responsiveness to node shutdowns and failures
WARNING 9011: MergeOutCache doesn't work when reflexive mergeout is enabled
WARNING 9127: UPDATE/DELETE a table with aggregate projections (LAPs) will automatically run refresh on the LAPs when this transaction commits
WARNING 9210: Target node *string* is down, so depot size has been estimated from depot location on initiator. As soon as the node

comes up, its depot size might be altered depending on its disk size

Error messages

ERROR 2005: *string*
ERROR 2069: '*string*' is not a table name in the current search_path
ERROR 2085: A column cannot occur in an equality predicate and an interpolation predicate
ERROR 2093: A join can have only one set of interpolated predicates
ERROR 2100: A query with Time Series Aggregate Function *string* must have a timeseries clause
ERROR 2156: All columns are evaluated by expressions. At least one column should be read from input
ERROR 2157: All columns in select list must be columns used by projection
ERROR 2164: Alter Column Type driver: Unrecognized command type
ERROR 2180: Analytic function *string* must have an OVER clause
ERROR 2187: Analytic functions cannot be nested
ERROR 2191: ANALYZE CONSTRAINT is not supported
ERROR 2203: Anchor table not found
ERROR 2214: Argument *value* has invalid type *value* in ANALYZE_WORKLOAD
ERROR 2215: Argument *value* in ANALYZE_WORKLOAD must be constant
ERROR 2223: Argument in ANALYZE_CONSTRAINTS must be constant
ERROR 2230: Arguments of row IN must all be row expressions
ERROR 2346: Cannot alter a sequence with START
ERROR 2381: Cannot create a sequence with RESTART
ERROR 2444: Cannot insert into or update IDENTITY/AUTO_INCREMENT column "*string*"
ERROR 2445: Cannot insert into system column "*string*"
ERROR 2446: Cannot insert multiple commands into a prepared statement
ERROR 2521: Cannot specify anything other than user defined transforms *string* in the *string* list
ERROR 2525: Cannot specify more than one user-defined transform function in the SELECT list
ERROR 2526: Cannot specify more than one window clause with a user defined transform
ERROR 2534: Cannot use "PR" with "S"/"PL"/"MI"/"SG"
ERROR 2535: Cannot use "S" with "MI"
ERROR 2536: Cannot use "S" with "PL"
ERROR 2537: Cannot use "S" with "PL"/"MI"/"SG"/"PR"
ERROR 2538: Cannot use "S" with "SG"
ERROR 2539: Cannot use "V" with a decimal point
ERROR 2545: Cannot use aggregate function in VALUES
ERROR 2627: Column "*string*" in ENCODED BY clause is not found in the table

ERROR 2641: Column "*string.string*" must appear in the PARTITION BY list of Timeseries clause or be used in a Time Series Aggregate Function
ERROR 2642: Column *string* cannot be evaluated
ERROR 2645: Column *string* has other computed columns in its expression
ERROR 2647: Column *string* in ORDER BY list is not found in TABLE
ERROR 2659: Column alias list for "*string*" has too many entries
ERROR 2669: COLUMN OPTION is not supported
ERROR 2670: Column options are not supported
ERROR 2696: Conflicting INTERVAL subtypes
ERROR 2697: Conflicting NULL/NOT NULL declarations for column "*string*" of table "*string*"
ERROR 2699: Conflicting or redundant options
ERROR 2712: Constraint "*string*" for relation "*string*" already exists
ERROR 2715: Constraint declared INITIALLY DEFERRED must be DEFERRABLE
ERROR 2754: COPY requires a data source; either a FROM clause or a WITH SOURCE for a user-defined source
ERROR 2764: COPY: Expression for column *string* cannot be coerced
ERROR 2946: CREATE TABLE AS specifies too many column names
ERROR 2947: CREATE VIEW specifies more column names than columns
ERROR 2986: Database name is required (too few dotted names): *string*
ERROR 3023: Default values specified for IDENTITY/AUTO_INCREMENT column "*string*" of table "*string*"
ERROR 3125: Drop Column driver: Unrecognized command type
ERROR 3142: Duplicate column "*string*" in create table statement
ERROR 3143: Duplicate column *string* in constraint
ERROR 3151: Duplicate tables in projection not allowed
ERROR 3155: Duplicated parameters *string* not allowed
ERROR 3158: Each *string* query must have the same number of columns
ERROR 3164: Empty column name is invalid
ERROR 3165: Empty constraint name is invalid
ERROR 3171: ENCODED BY is not supported in CREATE PROJECTION statement when column renaming list is defined
ERROR 3172: ENCODED BY is not supported in CREATE PROJECTION statement with column definition list
ERROR 3173: ENCODED BY is not supported in CREATE TABLE AS SELECT statement when column list is defined
ERROR 3176: End epoch (*value*) number out of range
ERROR 3177: End epoch (*value*) precedes start epoch (*value*)
ERROR 3183: Epoch number out of range
ERROR 3185: Epoch time out of range
ERROR 3344: EXPORT ... SELECT may not specify INTO
ERROR 3348: Expression "(<*string*> - <*string*>) <interval qualifier>" is not supported
ERROR 3349: Expression for column *string* cannot be coerced
ERROR 3458: Function *string* is not allowed in Time Series queries
ERROR 3461: Function *string* requires at least one argument
ERROR 3500: HAVING / GROUP BY not allowed with Time Series query
ERROR 3511: IGNORE NULLS can only be used with FIRST_VALUE or LAST_VALUE or NTH_VALUE
ERROR 3517: Improper %*value* reference (too few dotted names): *string*
ERROR 3518: Improper %*value* reference (too many dotted names): *string*
ERROR 3519: Improper qualified column name: *string*
ERROR 3520: Improper qualified name (too many dot): *string*
ERROR 3521: Improper qualified name (too many dots): *string*
ERROR 3522: Improper qualified name (too many dotted names): *string*
ERROR 3523: Improper relation name (too many dotted names): *string*
ERROR 3538: Incorrect parameter type provided: *string* is supposed to be of type *string*
ERROR 3548: Indirection is not allowed in a target column

ERROR 3549: Indirection is not allowed in the name of a FILLER column
ERROR 3571: INSERT ... SELECT may not specify INTO
ERROR 3572: INSERT has more expressions than target columns
ERROR 3573: INSERT has more target columns than expressions
ERROR 3599: Interpolated predicates are allowed only in ON CLAUSE of ANSI Join syntax
ERROR 3602: Interpolated predicates should refer to columns from both relations of the join
ERROR 3615: INTO is only allowed on first SELECT of UNION/INTERSECT/EXCEPT
ERROR 3619: Invalid argument type *value* in ANALYZE_CONSTRAINTS
ERROR 3672: Invalid hexadecimal number at or near "*string*"
ERROR 3709: Invalid number at or near "*string*"
ERROR 3775: Invalid Unicode escape character '*character*'
ERROR 3776: Invalid Unicode hex number "*string*"
ERROR 3812: Join condition in merge query must include at least one table attribute
ERROR 3865: LIMIT #,# syntax is not supported
ERROR 3944: Misplaced DEFERRABLE clause
ERROR 3945: Misplaced INITIALLY DEFERRED clause
ERROR 3946: Misplaced INITIALLY IMMEDIATE clause
ERROR 3947: Misplaced NOT DEFERRABLE clause
ERROR 3949: Missing argument
ERROR 3958: Missing savepoint name
ERROR 3976: Multiple assignments to same column "*string*"
ERROR 3978: Multiple decimal points
ERROR 3979: Multiple default values specified for column "*string*" of table "*string*"
ERROR 3980: Multiple DEFERRABLE/NOT DEFERRABLE clauses not allowed
ERROR 3981: Multiple FOR UPDATE clauses are not allowed
ERROR 3982: Multiple INITIALLY IMMEDIATE/DEFERRED clauses not allowed
ERROR 3984: Multiple LIMIT clauses are not allowed
ERROR 3985: Multiple OFFSET clauses are not allowed
ERROR 3986: Multiple ORDER BY clauses are not allowed
ERROR 4023: Must specify memorySize parameter
ERROR 4024: Must specify one new name for each schema
ERROR 4025: Must specify one new name for each table
ERROR 4026: Must specify one new name for each view
ERROR 4062: NEW used in query that is not in a rule
ERROR 4066: No actions specified
ERROR 4070: No columns specified in select list
ERROR 4072: No constraints defined
ERROR 4105: No second argument needed when analyzing all constraints
ERROR 4136: Node "*string*" does not exist
ERROR 4161: Non-integer constant in *string*
ERROR 4164: Nonexistent columns: '*string*'
ERROR 4203: Number of columns defined in CREATE TABLE statement is less than in SELECT query output
ERROR 4204: Number of columns defined in CREATE TABLE statement is more than in SELECT query output
ERROR 4205: Number of columns in the PROJECTION statement must be the same as the number of columns in the SELECT statement
ERROR 4225: OLD used in query that is not in a rule
ERROR 4227: ON COMMIT clause may only be specified for TEMPORARY tables
ERROR 4237: Only a single "S" is allowed
ERROR 4239: Only ASC is allowed in ORDER BY list of auto projection for CREATE TABLE
ERROR 4240: Only columns are allowed in ORDER BY list of auto projection for CREATE TABLE
ERROR 4241: Only columns are allowed in SELECT list of projection

ERROR 4247: Only inner joins are allowed in a projection defining query
ERROR 4268: Only tables are allowed in FROM clause of projection
ERROR 4291: Operator too long at or near "*string*"
ERROR 4294: Option *string* conflicts with prior options
ERROR 4296: Options not set
ERROR 4297: ORDER BY column in timeseries OVER clause must be Timestamp type
ERROR 4325: Parameters can only contain constants or constant expressions
ERROR 4327: Parsing error "*string*" at or near "*string*"
ERROR 4328: PARTITION AUTO can only be used with single-phase user defined transform functions
ERROR 4348: Path Number must be in [0, *value*]
ERROR 4350: Pattern "0" must come before "PR"
ERROR 4351: Pattern "9" must come before "PR"
ERROR 4383: plannedConcurrency must be greater than 0
ERROR 4487: Projections can only be sorted in ascending order
ERROR 4669: SELECT * with no tables specified is not valid
ERROR 4670: SELECT DISTINCT ON is not standard SQL, use just SELECT DISTINCT
ERROR 4706: Sequence functions accept constant strings arguments only
ERROR 4732: Set Operators are not allowed in a projection
ERROR 4761: Sort key *string* should be in the target list
ERROR 4828: Subquery has too few columns
ERROR 4829: Subquery has too many columns
ERROR 4831: Subquery in FROM may not have SELECT INTO
ERROR 4833: Subquery in FROM must have an alias
ERROR 4835: Subquery must return a column
ERROR 4836: Subquery must return only one column
ERROR 4837: Subquery not allowed in a projection
ERROR 4838: Subquery not allowed in SELECT list and/or ORDER BY clause for Time Series queries
ERROR 4855: Syntactic Optimizer requires joins written using ANSI JOIN syntax
ERROR 4856: Syntax error at or near "*string*"
ERROR 4947: The foreign key in this constraint has already been defined as a foreign key for relation "*string*"
ERROR 4955: The number of target columns (*value*) does not match the number of columns (*value*) in the EXPORT statement
ERROR 4956: The number of target columns (*value*) is less than the number of columns (*value*) in the EXPORT statement
ERROR 5007: Time Series Aggregate Functions cannot be nested
ERROR 5008: Time Series queries cannot refer to column of outer query
ERROR 5009: Time Series queries cannot refer to column of outer query: "*string*.*string*"
ERROR 5011: Time slice length must be a positive integer constant
ERROR 5012: Time slice length must be an interval constant
ERROR 5161: Unequal number of entries in row expression
ERROR 5162: Unequal number of entries in row expressions
ERROR 5272: Unsupported From clause expression
ERROR 5285: Unsupported SET option
ERROR 5286: Unsupported SET option *string*
ERROR 5287: Unsupported SHOW option *string*
ERROR 5290: Unsupported transaction option *string*
ERROR 5305: Unterminated /* comment at or near "*string*"
ERROR 5306: Unterminated bit string literal at or near "*string*"
ERROR 5307: Unterminated dollar-quoted string at or near "*string*"
ERROR 5308: Unterminated hexadecimal string literal at or near "*string*"
ERROR 5310: Unterminated quoted identifier at or near "*string*"

ERROR 5311: Unterminated quoted string at or near "*string*"
ERROR 5323: Usage: clear_profiling(*string* , *string*)
ERROR 5324: Usage: disable_profiling(*string*)
ERROR 5325: Usage: enable_profiling(*string*)
ERROR 5326: Use "*string*(*)" to call this aggregate function
ERROR 5383: User Defined Transform Functions are allowed only in a SELECT list
ERROR 5386: User defined transform will return *value* columns, whereas *value* aliases provided
ERROR 5401: User-defined transform function *string* must have an OVER clause
ERROR 5413: Value must be either "units" or "plain"
ERROR 5415: Value must be either ON or OFF
ERROR 5452: Virtual tables are not allowed in FROM clause of projection
ERROR 5492: Wrong number of parameters for prepared statement "*string*"
ERROR 5493: Wrong number of parameters on left side of OVERLAPS expression
ERROR 5494: Wrong number of parameters on right side of OVERLAPS expression
ERROR 5505: You can specify a node name only once in a create projection statement, node *string* appears more than once
ERROR 5518: Zero-length delimited identifier at or near "*string*"
ERROR 5566: Dimension tables may not have data that shorter lived than the fact table
ERROR 5577: Expression for user-defined type column *string* cannot be coerced
ERROR 5600: Invalid predicate in projection-select. Only PK=FK equijoins are allowed
ERROR 5617: Multiple WITH clauses not allowed
ERROR 5629: Not a Star or Snow-Flake Query
ERROR 5630: Nullable FKs are not allowed in projection definition
ERROR 5664: Subqueries not allowed in projection definition
ERROR 5670: The number of alias columns must be the same as the number of selected columns
ERROR 5679: Unrecognized order by expression
ERROR 5691: User-defined function *string* is not a supported scalar function
ERROR 5711: Invalid function arguments
ERROR 5916: If specified, maximum error percentage must be a numeric constant
ERROR 5929: Invalid maximum error percentage specified
ERROR 6034: Syntax Error: '*string*' is a built in type
ERROR 6048: The minimum value that may be specified for maximum error percentage is 0.88
ERROR 6061: Too many arguments to *string*
ERROR 6119: 'deleted' hint takes no arguments
ERROR 6120: 'latestdata' hint arguments must be strings
ERROR 6124: A single argument must be supplied to *string*
ERROR 6136: Aggregate projection without group-by columns is not supported
ERROR 6137: Aggregate projections must have at least one aggregate (SUM, COUNT, MIN, or MAX)
ERROR 6140: All sort keys should be in the target list of the projection
ERROR 6146: At least two columns must be specified
ERROR 6196: Columns in ORDER-BY must be defined in the SELECT statement
ERROR 6197: Columns/Expressions in GROUP BY/PARTITION BY must be first and in the same order with columns in SELECT
ERROR 6198: ORDER BY columns/expressions in the OVER() clause must be

the first SELECT columns/expressions not specified by PARTITION BY clause, and must be specified in SELECT list order

ERROR 6199: Columns/Expressions in the PARTITION BY clause may not be repeated in the ORDER BY clause

ERROR 6232: DISTINCT Aggregates are not allowed in projection

ERROR 6293: Interpolated join predicates cannot have expressions or functions over join columns

ERROR 6294: Invalid Argument

ERROR 6321: Limit in Top-K query must be a positive number

ERROR 6324: Limit/Offset is only allowed in topk projections

ERROR 6340: Multiple ORDER BY clauses in partition TopK/Limit query are not allowed

ERROR 6341: Multiple PARTITION clauses in TopK/Limit query are not allowed

ERROR 6367: Only one table or projection is allowed in FROM clause of top-k projection

ERROR 6369: Only SUM, MIN, MAX and COUNT are allowed in aggregate projections

ERROR 6372: ORDER BY is not allowed in aggregate projection. The aggregate projection is automatically ordered on group by columns

ERROR 6373: ORDER BY is not allowed in top-k projections. The top-k projection is automatically ordered on partition by columns

ERROR 6379: PARTITION BEST can only be used with single-phase user defined transform functions

ERROR 6381: PARTITION NODES can only be used with single-phase user defined transform functions

ERROR 6394: SEGMENTED BY / UNSEGMENTED is not allowed in aggregate projection. The aggregate projection is automatically segmented on group by columns

ERROR 6395: SEGMENTED BY / UNSEGMENTED is not allowed in top-k projections. The top-k projection is automatically segmented on partition by columns

ERROR 6539: User Defined Transform *string* returns a string on which collation can't be applied in non default locale

ERROR 6543: Grouping functions only allowed with aggregates

ERROR 6544: MultiLevel Aggregates are not allowed in projection

ERROR 6640: Argument of hint *string* must be a positive integer

ERROR 6654: Batch/Prepass may only be used in the over(...) clause of a user defined transform in a Live Aggregate Projection

ERROR 6686: Cannot specify LIMIT with OVER(...) clause with a user defined transform

ERROR 6696: Column "*string*.*string*" refers to table "*string*" which is out of scope

ERROR 6697: Columns/Expressions in the partition clause have to appear in the SELECT list

ERROR 6701: Constants with the same parameter hint must be identical

ERROR 6800: Hint *string* must have one argument

ERROR 6853: Live aggregate projections may only be one of the following types: Group-by, Top-K, or UDT

ERROR 6878: No previously saved query to associate with

ERROR 6899: Parameters cannot have NULL values

ERROR 6969: Subqueries for aggregate projections need to contain User Defined Transforms

ERROR 6972: Syntax Error. Struct member '*string*' has missing base type

ERROR 7014: UD Parameters value length [*value*] is more than the max allowed length [*value*]

ERROR 7051: Unsupported hint for input expr

ERROR 7109: Parameter '*string*' is required

ERROR 7147: Option *string* is repeated. Please specify each option only

once
ERROR 7153: Syntax Error. At least one parameter has to be specified
ERROR 7164: Cannot use ORC format with FLEX tables
ERROR 7228: Cannot use *string* compression with *string* files
ERROR 7229: Cannot use PARQUET format with FLEX tables
ERROR 7327: SET USING cannot be specified for IDENTITY/AUTO_INCREMENT column "*string*" of table "*string*"
ERROR 7391: Cannot use an UDSource with *string* files
ERROR 7420: Expression list has more than one *string* column
ERROR 7488: Number of key/value pairs [*value*] exceeds the maximum allowed
ERROR 7538: Sequence manipulation functions not supported in INSERT SELECT with implicit column that has default query
ERROR 7744: Try local hint only supports SELECT queries without table join
ERROR 7746: Try local hint requires all nodes to be up
ERROR 7755: This projection is not valid with "try_local" hint
ERROR 7875: SET USING/DEFAULT cannot be specified for IDENTITY/AUTO_INCREMENT column "*string*" of table "*string*"
ERROR 7909: Columns/Expressions in PARTITION BY must be first and in the same order with columns in SELECT
ERROR 7965: At most one WHEN MATCHED clause is allowed in MERGE
ERROR 7966: At most one WHEN NOT MATCHED clause is allowed in MERGE
ERROR 7967: MERGE/INSERT has more expressions than target columns
ERROR 7968: MERGE/INSERT has more target columns than expressions
ERROR 7982: Cannot use expressions in OVER(...) clause
ERROR 7989: Invalid column in MERGE statement: *string*. The insert filter of a WHEN NOT MATCHED clause cannot reference the target table *string*

LICENSE_ISSUE

Messages associated with this SQLState

Error messages

ERROR 2005: *string*
ERROR 2382: Cannot create another node. The current license permits *value* node(s) and the database catalog already contains *value* node(s)
ERROR 3248: Error parsing license end date
ERROR 4943: The Enterprise Edition is installed. You cannot downgrade from the Enterprise Edition to the Community Edition
ERROR 5517: Your Vertica license is invalid or has expired
ERROR 6164: Cannot alter STANDBY node. The current license permits *value* node(s) and the database catalog already contains *value* node(s)
ERROR 6549: Cannot install new license to the database. New license permits *value* node(s) but the database catalog already contains *value* node(s)
ERROR 7018: Unable to audit license: database lacks an active license!
ERROR 8263: Invalid combination of input licenses
ERROR 8268: No license found
ERROR 8277: Unable to overwrite existing licenses
ERROR 8450: Cannot drop the license. The remaining licenses permit *value* node(s) and the database catalog contains *value* node(s)
ERROR 8625: Unsupported licensable feature
ERROR 8724: All of your Vertica licenses have expired
ERROR 8733: Node count exceeded license allowed node count limit
ERROR 9397: None of the licenses in this file can be installed [*string*]*string*

Notice messages

NOTICE 8723: Vertica license *string* is in its grace period; grace period expires in *value string*

Warning messages

WARNING 3863: License issue: *string*
WARNING 8724: All of your Vertica licenses have expired
WARNING 9164: Found *value* node(s) in the database catalog but only *value* node(s) are permitted by the current license

Glossary

The Vertica Glossary defines terms that are common and specific to Vertica.

In this section

- Access rank
- Administration host
- Administration tools
- Agent
- Anchor table
- Ancient history mark (AHM)
- Apportioned load
- Authentication service (AS)
- Bitstring
- Buddy projection
- Bulk loading
- C-store
- Cardinality
- Catalog
- Catalog path
- Cell
- Cluster
- Columnar tables
- Communal storage
- Control node
- Cooperative parse
- Correlated columns
- Critical node
- Current epoch
- Data collector
- Data path
- Database
- Database Designer
- Database superuser
- Default subcluster
- DELTAVAL (delta encoding)
- Depot
- Depot warming
- Derived column
- Dimension table
- Directed query

- Encoding
- Enterprise Mode
- Eon Mode
- Epoch
- Epoch map
- Executor node
- Expression
- External procedure
- Event series
- Flexible tables
- Flattening (subqueries and views)
- Full backup
- GENERAL pool
- Grant
- Grouped ROS
- Hash segmentation
- Historical data
- Historical query
- Immutable (invariant) functions
- Initiator node
- K-safety
- Last epoch
- Last good epoch (LGE)
- Live aggregate projection
- Locale
- Logical schema
- Location label
- Management Console
- MC super (superuser administrator)
- MC-managed database
- Mergeout
- Meta-functions
- Metadata
- Mutual mode
- Node
- Non-repeatable read
- NUL
- NULL
- OID
- Parallel load
- Path (quality plan)
- Partitioning
- Phantom read
- Physical schema
- Physical schema design
- Primary column
- Primary node
- Primary subcluster
- Primary subscriber
- Projection
- Projection set
- Query cluster level
- Query optimizer
- Quorum
- Recovery
- Referential integrity
- Refresh (projections)
- Resegmentation
- Resource pool
- Resource manager
- Role

- Rollback
- ROS (Read optimized store)
- Savepoint
- Secondary subcluster
- Segmentation
- Server mode
- Session
- Shard
- Shard coverage
- Snapshot isolation
- Spread
- Sort-merge join
- Stable functions
- Statement
- Storage location
- Storage policy
- Strict
- Subcluster
- Superprojection
- Temp location
- Temp space
- Top-k projection
- Transaction
- Tuple mover (TM)
- UDx
- Up-to-date (projection)
- User-defined SQL function
- View
- Volatile functions
- vsql
- Window (analytic)
- Working data size
- Workload analyzer

Access rank

Determines the speed at which a column can be accessed. Columns are stored on disk from the highest ranking to the lowest ranking in which the highest ranking columns are placed on the fastest disks and the lowest ranking columns are placed on the slowest disks.

Administration host

The host on which the Vertica rpm package was manually installed. Always run the Administration Tools on this host if possible.

Administration tools

Vertica Administration Tools provides a graphical user interface for managing a Vertica database. With this tool, you can perform various tasks, including:

- View the state of the database cluster.
- Create a database.
- Start a database.
- Stop a database.
- Run Database Designer.
- Connect to a database using vsql.

Agent

A daemon process that runs on each Vertica cluster node. The agent is used by certain clients, such as Management Console, to administer Vertica.

Agents monitor Vertica database clusters and communicate with their clients to provide the following functionality:

- Provide local access, command, and control over database instances on a given node, using functionality similar to Administration tools
- Report log-level data from the Administration Tools and Vertica log files
- Cache details from long-running jobs—such as create/start/stop database operations—that you can view through your browser
- Track changes to data-collection and monitoring utilities and communicate updates to clients
- Specifically for MC, communicate between all cluster nodes and MC through a webhook subscription, which automates information sharing and reports on cluster-specific issues like node state, alerts, events, and so on

The agent runs on port 5444, which must be accessible to agent clients.

Anchor table

Database table that is the source for data in a projection . The anchor table and its projection must be in the same schema. The privileges to create, access, or alter a projection are based on the anchor tables that the projection references, as well as the schemas that contain them.

In the following simple statement, public data is the anchor table:

```
=> CREATE PROJECTION publicdataproj AS (SELECT * FROM publicdata);
```

Ancient history mark (AHM)

Also known as AHM, the ancient history mark is the oldest epoch whose data is accessible to historical queries . Any data that precedes the AHM is eligible to be purged .

For detailed information, see Understanding Vertica Epochs in the Vertica Knowledge Base .

Apportioned load

An *apportioned load* is a divisible load, such that you can load a single data file on more than one node. Apportioned load divides the load at planning time, based on available nodes and cores on each node. Each load starts at a different offset, requiring a parser that supports apportioning. Some of the parsers built into Vertica support apportioned load. Using the SDK, you can write parsers that perform apportioned loads.

Authentication service (AS)

A service that usually runs on the same host as the Kerberos Key Distribution Center (KDC). The AS issues tickets for a requested service. The tickets are in turn given to users for access to the service. The AS answers requests from clients that do not send credentials with a request. The AS is generally used to gain access to the ticket-granting service (TGS) by issuing a ticket-granting ticket (TGT).

Bitstring

A sequence of bits.

Buddy projection

Required for K-safety. Two projections are considered to be buddies if they contain the same columns and have the same hash segmentation, using different node ordering.

For more information, see:

- High availability with projections
- Designing segmented projections for K-safety
- GET_PROJECTION_STATUS

Bulk loading

A process of loading large amounts of data, such as an initial load of historic data.

C-store

A research project at MIT, Brandeis, Brown, and the University of Massachusetts (Boston), on which Vertica is based.

Cardinality

Refers to the number of unique values for a given column in a relational table:

- *High cardinality* : Refers to columns containing values that are highly unique, such as a customer ID or an employee e-mail address. For example, in the Vertica VMart schema , the employee_dimension table contains an employee_key column. This column contains values that uniquely identify each employee. Since the values in this column are unique and could be numerous, the column's cardinality type is referred to as high cardinality.
- *Normal cardinality* : Refers to columns containing values that are less unique, such as job titles and street addresses. An example of a normal-cardinality column would be job_title or employee_first_name in the employee_dimension table, where many employees could share the same job title or same first name.
- *Low cardinality:* Refers to a low number of unique values, relative to the overall number of records in a table. For example, in the employee_dimension table, the column called employee_gender would contain two unique values: 'Male' or 'Female'. Since there are only two values possible in this column, cardinality is low.

Catalog

A set of files that contains information (metadata) about the objects—such as nodes, tables, constraints, and projections—in a database. Vertica maintains a catalog on each node in the cluster.

Catalog path

A storage location used to store the database catalog.

Cell

A cell is space in a database object allocated for a single piece of data. For a list of supported data types that can populate a cell, see Data types .

Cluster

The concept of Cluster in the Vertica Analytics Platform is a collection of hosts with the Vertica software packages (RPM or DEB) that are in one admin tools domain. You can access and manage a cluster from one admintools initiator host.

Columnar tables

Vertica database tables consisting of structured data columns. The term differentiates these tables from Flex (or Flexible) tables, which minimally contain one column of unstructured, or semi-structured data. Flex tables can also have structured data columns, but they are not required. Compare with Flexible tables .

Communal storage

The shared storage location containing an Eon Mode database's data. The data within the communal storage is the canonical copy of the data—Vertica does not consider data as being committed until it has been written to communal storage.

The communal data storage location is based on an object store, such as an S3 bucket when Vertica runs in the AWS cloud, or a PureStorage FlashBlade.

Control node

A node that connects to the Spread service to send and receive cluster-wide broadcast messages. In databases where the large cluster feature is disabled, all nodes are control nodes. In databases where the large cluster feature is enabled, a subset of nodes are control nodes. Vertica assigns non-control nodes to a control node. These dependent nodes rely on their control node to relay broadcast messages to them. See Large Cluster for more information.

Cooperative parse

A *cooperative parse* occurs when a single node uses multiple threads to parse data for loading. Cooperative parse divides a load at execution time, based on how threads are scheduled, if the parser supports cooperation. Some of the parsers built into Vertica support cooperative parse. Using the SDK, you can write parsers that perform cooperative parse.

Correlated columns

Two columns are correlated if the value of one column is related to the value of the other column. For example, state name and country name columns are strongly correlated because the city name usually, but perhaps not always, identifies the state name. The city of Conshohoken is uniquely associated with Pennsylvania, whereas the city of Boston exists in Georgia, Indiana, Kentucky, New York, Virginia, and Massachusetts. In this case, city name is strongly correlated with state name.

Critical node

A critical node is a node whose failure would cause the database to become unsafe and force a shutdown. Nodes can become critical for the following reasons:

- A node has the only copy of a particular projection.
- Fewer than half of your nodes are active. In an Eon Mode database, at least half of your primary nodes must be up to maintain data integrity.

The V_MONITOR.CRITICAL_NODES system table lists the critical nodes, if any, in your cluster.

For more information, see K-safety in an Enterprise Mode database for Enterprise Mode databases, and Data integrity and high availability in an Eon Mode database for Eon Mode databases.

Current epoch

The epoch into which data (COPY, INSERT, UPDATE, and DELETE operations) is currently being written.

Data collector

A utility that collects and retains database monitoring information. For details, see Data collector utility .

Data path

A storage location that contains actual database data files.

Database

A cluster of nodes that, when active, can perform distributed data storage and SQL statement execution through administrative, interactive, and programmatic user interfaces.

Database Designer

A tool that analyzes a logical schema definition, sample queries, and sample data, and creates a physical schema (projections) in the form of a SQL script that you deploy automatically or manually. The script creates a minimal set of superprojections to ensure K-safety, and, optionally, non-superprojections. In most cases, the projections created by the Database Designer provide excellent query performance within physical constraints.

The Database Designer can create two distinct design types. The design you choose depends on what you are trying to accomplish:

- Comprehensive design
- Incremental design

You can also create custom designs if the Database Designer does not meet your needs.

For detailed information, see Creating a database design .

Database superuser

The automatically-created database user who has the same name as the Linux database administrator account and who can bypass all GRANT/REVOKE authorization, or any user that has been granted the PSEUDOSUPERUSER role. Do not confuse the concept of a database superuser with Linux superuser (root) privilege. A database superuser cannot have Linux superuser privilege.

Default subcluster

The default subcluster is the subcluster Vertica adds new nodes to if you do not specify a subcluster to contain the new nodes. Your database can only have a single default subcluster. You can make a subcluster the default using the ALTER SUBCLUSTER statement.

DELTAVAL (delta encoding)

Stores only the differences between sequential data values instead of the values themselves.

Depot

A cache of data maintained by the nodes in an Eon Mode database to limit reads from communal storage . Retrieving data from communal storage often has high latency and potentially limited bandwidth, especially in cloud environments. Each node in the database caches the data it reads from and writes to the communal storage. When processing a query, they first check this local cache for the data they need. If the data is cached locally, the nodes use the cached version instead of retrieving the data from communal storage.

Depot warming

On startup, the depots of new nodes are empty, while the depots of restarted nodes often contain stale data that must be refreshed. When depot warming is enabled, a node that is undergoing startup preemptively loads its depot with frequently queried and pinned data. When the node completes startup and begins to execute queries, its depot already contains much of the data it needs to process those queries. This reduces the need to fetch data from communal storage, and expedites query performance accordingly.

> **Note**
> Fetching data to a warming depot can delay node startup.

For details, see Managing depot caching .

Derived column

A column whose values are calculated by an expression at load time. The expression is specified within the COPY statement, and the column exists in the target database.

Dimension table

Sometimes called a lookup or reference table, a dimension table is one of a set of companion tables to a large (fact/anchor) table in a star schema. It contains the PRIMARY KEY column corresponding to the join columns in fact tables. For example, a business might use a dimension table to contain item codes and descriptions.

Dimension tables can be connected to other dimension tables to form a hierarchy of dimensions in a snowflake schema.

Directed query

A saved set of instructions that direct the optimizer to generate a query plan for a given query. The query plan consists of SQL annotated with hints. A directed query pairs two components:

- *Input query* : A query that triggers use of this directed query when it is active.
- *Annotated query* : A SQL statement with embedded optimizer hints . The annotated query is used by the optimizer in creating a query plan for the specified input query.

Encoding

The process of converting data into a standard format. In Vertica, encoded data can be processed directly, while compressed data cannot. Vertica uses a number of different encoding strategies, depending on column data type, table cardinality, and sort order.

Enterprise Mode

A database mode that optimizes your database for analytic speed. This is the "original" mode of the Vertica database—the only mode it supported before Eon Mode was introduced. In this mode, data is stored by the database nodes. This proximity allows nodes to operate on locally stored data for most queries, reducing query times. An Enterprise Mode database is harder to scale up and down than an Eon Mode database, which is optimized for scalability.

Eon Mode

Eon Mode is the database mode that optimizes your database for scalability. This mode separates data storage from computing resources. By separating the two, you can add or remove nodes from your cluster to adjust growing or shrinking analytic workloads. Scaling the cluster size does not affect running queries. Eon Mode is especially well-suited for cloud environments. See Eon Mode concepts for more information.

Epoch

A logical unit of time in which a single change is made to data in your Vertica database.

For detailed information, see Epochs .

Epoch map

A catalog object that provides mapping between time and epochs. Specifically, an epoch map contains a list of epoch numbers and their associated timestamps.

Executor node

Any node that participates in executing a specific SQL statement. The initiator node can, and usually does, also function as an executor node.

Expression

An expression is anything that can represent a single column in a SELECT statement.

For example, the following are all expressions:

```
1+2
foo(3)
x
```

External procedure

A procedure external to Vertica that you create, maintain, and store on the server.

Event series

Tables with a time column, most typically a timestamp data type.

Flexible tables

Vertica database tables that minimally contain two columns:

__identity__ : A real column with an incrementing IDENTITY value for partitioning and sorting. Used if no other columns serve this purpose.

__raw__ : A real LONG VARBINARY column containing unstructured, or semi-structured data.

You can create Flex tables with additional real columns, but they are not required. Compare with Columnar tables .

Flattening (subqueries and views)

Occurs when a subquery or named view is internally rewritten so the subquery is combined with the outer query block. The result sets of the original and flattened queries are exactly the same, but the flattened query usually benefits from significant performance improvements.

Full backup

Consists of copying each catalog and all data files (ROS containers) on each node, as well as the complete /opt/vertica/config directory.

GENERAL pool

A special built-in pool that represents the total amount of RAM available to the resource manager for use by queries. Other pools can borrow memory from the GENERAL pool. See also Built-in pools .

Grant

Vertica defines GRANT in two ways:

1. Grant a user privileges to access database objects using any GRANT statement , except GRANT (Authentication).
2. Associate a user-defined authentication method with a user through GRANT (Authentication) . This operation differs from GRANT <privileges> as authentication methods are “associated” with a user or role and privileges are “granted” to a user or role.

Examples

Grant Access Privileges to a User

This example shows how to grant a user, Joe, privileges to access the online_sales schema:

```
=> GRANT USAGE ON SCHEMA online_sales TO Joe;
```

Associate an Authentication Method with a User

This example shows how to associate the v_ldap authentication method to user jsmith:

```
=> GRANT AUTHENTICATION v_ldap TO jsmith;
```

Grouped ROS

A grouped ROS is a highly-optimized, read-oriented physical storage structure organized by projection. A grouped ROS makes heavy use of compression and indexing. Unlike a ROS, a grouped ROS stores data for two or more grouped columns in one disk file.

Hash segmentation

Specifies how to segment projection data for distribution across all cluster nodes. You can specify segmentation for a table and a projection. If a table definition specifies segmentation, Vertica uses it for that table's auto-projections .

It is strongly recommended that you use Vertica's built-in HASH function, which distributes data evenly across the cluster, and facilitates optimal query execution.

For more detailed information, see Segmented projections .

Historical data

Refers to any data in memory or physical storage other than the current epoch. Historical data includes all COPY, INSERT, UPDATE, and DELETE operations, including deleted rows. This allows Vertica to run a historical query on data written up to and including the epoch representing the specified date and time.

Historical query

A query that retrieves data from a snapshot of the database, taken at a specific timestamp or epoch. For details, see Historical queries .

Immutable (invariant) functions

When run with a given set of arguments, immutable functions always produce the same result, regardless of environment or session settings such as locale.

Initiator node

In the context of a client connection, the initiator node is the node associated with the specific host to which the connection was made. The initiator node can, and usually does, also function as an executor node, and is generally where the most descriptive log messages reside.

K-safety

K-safety sets fault tolerance for the database cluster, where K can be set to 0, 1, or 2. The value of K specifies how many copies Vertica creates of Segmented projections data. If K-safety for a database is set to 1 or 2, Vertica creates K+1 instances, or *buddies* , of each projection segment. Vertica distributes these buddies across the database cluster, such that projection data is protected in the event of node failure. If any node fails, the database can continue to process queries so long as buddies of data on the failed node remain available elsewhere on the cluster.

For more information, see Designing for K-safety .

Last epoch

The last epoch is the current epoch minus one. SELECT statements under READ COMMITTED isolation read from the last epoch.

Last good epoch (LGE)

A term used in manual recovery, LGE (Last Good Epoch) refers to the most recent epoch that can be recovered.

Live aggregate projection

A live aggregate projection contains columns with values that are aggregated from columns in its anchor table. When you load data into the table, Vertica aggregates the data before loading it into the live aggregate projection. On subsequent loads—for example, through INSERT or COPY —Vertica recalculates aggregations with the new data and updates the projection.

Locale

Locale specifies the user's language, country, and any special variant preferences, such as collation. Vertica uses locale to determine the behavior of certain string functions. Locale also determines the collation for various SQL commands that require ordering and comparison, such as aggregate GROUP BY and ORDER BY clauses, joins, and the analytic ORDER BY clause.

The default locale for a Vertica database is en_US@collation=binary (English US). You can define a new default locale that is used for all sessions on the database. You can also override the locale for individual sessions. However, projections are always collated using the default en_US@collation=binary collation, regardless of the session collation. Any locale-specific collation is applied at query time.

If you set the locale to null, Vertica sets the locale to en_US_POSIX . You can set the locale back to the default locale and collation by issuing the vsql meta-command \locale . For example:

Note

```
=> set locale to '';
INFO 2567:  Canonical locale: 'en_US_POSIX'
Standard collation: 'LEN'
English (United States, Computer)
SET
=> \locale en_US@collation=binary;
INFO 2567:  Canonical locale: 'en_US'
Standard collation: 'LEN_KBINARY'
English (United States)
=>  \locale
en_US@collation-binary;
```

You can set locale through ODBC , JDBC , and ADO.net .

Logical schema

Consists of a set of tables and referential integrity constraints in a Vertica database. The objects in the logical schema are visible to SQL users. The logical schema does not include projections, which make up the physical schema.

Location label

A label assigned to a storage location. Location labels identify the location so you can create object storage policies. The labeled location you use in a storage policy becomes the default storage location for the object.

Management Console

A database management tool that provides a unified view of your Vertica database and lets you monitor multiple clusters from a single point of access. See Management Console .

MC super (superuser administrator)

Called Super on the MC interface, the MC super is the Linux user account that gets created when you configure MC . See Configuring Management Console and Configuration privileges .

MC-managed database

A Vertica database that an MC SUPER or ADMIN user creates on MC or imports into the MC interface, along with the database cluster. When MC users are granted database privileges, their privileges are defined though the MC itself and pertain only to databases managed on the MC. See Users, roles, and privileges .

Mergeout

Mergeout is a Tuple Mover process that consolidates ROS containers and purges deleted records.

Meta-functions

Used to query or change the internal state of Vertica and are not part of the SQL standard. See Vertica meta-functions .

Metadata

Data that describes the data in a database, such as data type, compression, constraints, and so forth, for each column in the tables. Metadata is stored in the Vertica catalog.

Mutual mode

When a database is configured for TLS/SSL security in *mutual mode* , incoming client requests verify the certificate of the server, and the server also requires that each client present a certificate and private key so that the server can verify the client.

Node

A host configured to run an instance of Vertica. It is a member of the database cluster. For a database to have the ability to recover from the failure of a node requires a database K-safety value of at least 1 (3+ nodes).

Non-repeatable read

Occurs in a READ COMMITTED isolation level when two identical queries in the same transaction produce different results. This occurs when another transaction commits changes that alter the results of the query after the first query has completed and before the second query has begun.

NUL

Represents a character whose ASCII/Unicode code is zero, sometimes qualified "ASCII NUL".

NULL

Means *no value* , and is true of a field (column) or constant but not of a character.

OID

An object identifier (OID) is an identifier used to name an object. Structurally, an OID consists of a node in a hierarchically-assigned namespace, formally defined using the International Telecommunication Union-Telecommunication's (ITU-T) Abstract Syntax Notation standard (ASN.1). Vertica database objects are always assigned an OID. The OID can be used directly in some statements, such as HAS_TABLE_PRIVILEGE .

Source: Wikipedia

Parallel load

Parallel load is the process of loading data on any available node in the cluster (not necessarily the local node). Use this approach in combination with wildcards (such as *.dat) to load data files in parallel in a distributed manner. See COPY ON ANY NODE in Parameters .

Path (quality plan)

The execution strategy of the Vertica cost-based query optimizer, denoting a sub operation in the query plan.

Partitioning

Specifies how data is organized within individual nodes. Partitioning attempts to introduce hot spots within the node, providing a convenient way to drop data and reclaim the disk space.

> **Note**
> Partitioning and segmentation are terms often used interchangeably for other databases, but they have completely separate goals in Vertica regarding data localization. See Partitioning and segmentation in the Administrator's Guide for details.

Phantom read

Occurs in a READ COMMITTED isolation level when two identical queries in the same transaction produce different collections of rows. This occurs because a table lock is not acquired on SELECT during the initial query.

Physical schema

Consists of a set of projections used to store data on disk. The projections in the physical schema are based on the objects in the logical schema.

Physical schema design

A usable K=1 design based on an analysis of the sample data files and queries (if available). The physical schema design contains segmented (fact table) superprojections and replicated (dimension table) superprojections.

Primary column

A column that is loaded from raw data, and not derived from an expression.

Primary node

In Eon Mode, a primary node is a node that is a member of a primary subcluster . Primary nodes are the only nodes in the database that Vertica considers when determining whether the database is able to maintain data integrity. Vertica requires that more than half of the primary nodes in the database be up. Also, all shards must have at least one primary node as a subscriber. If either of these conditions are not met, Vertica shuts the database down to prevent potential data corruption.

Primary subcluster

In Eon Mode, a primary subcluster is a type of subcluster that is intended to form the core of your database. Vertica only considers the nodes in primary subclusters when determining the K-safety of your database. Your database can remain running as long as half the nodes in your primary subclusters are up, and all shards have at least one node in a primary subcluster as a subscriber. See Subcluster Types and Elastic Scaling for more information.

Primary subscriber

In an Eon Mode database, each shard has a primary subscriber node. This node is responsible for running Tuple Mover processes that maintain the data in the shard.

Projection

Optimized collections of table columns that provide physical storage for data. A projection can contain some or all of the columns of one or more tables.

For more information about Vertica projections, see Projections .

Projection set

A group of buddy projections that are safe for a given level of K-safety. When K=1, there are two buddies in a set; when K=2, there are three buddies. The Database Designer assigns all projections in a projection set the same base name so they can be identified as a group.

A projection must be part of a projection set before it is refreshed. Once a projection set is created (by creating buddies), the set is refreshed in a single transaction.

Query cluster level

Determines the number of sets used to group similar queries. The query cluster level can be any integer from one (1) to the number of queries to be included in the physical schema design.

Queries are generally grouped based on the columns they access and the way in which they are used. The following work loads typically use different types of queries and are placed in different query clusters: drill downs, large aggregations, and large joins. For example, if a reporting tool and dashboard both access the same database, the reporting tool is likely to use a drill down to access a subset of data and the dashboard is likely to use a large aggregation to look across a large range of data. In this case, there would be at least two (2) query clusters.

Query optimizer

The component that evaluates different strategies for running a query and picks the best one.

Quorum

Your database has a minimum number of nodes that must be up and part of the database cluster for the database to continue operating. When this minimum requirement is met, your database has a quorum of nodes.

The number of nodes that make up a quorum depends on the database mode:

- In Enterprise Mode, over half the nodes (50% of total nodes + 1) must be up.
- In Eon Mode, over half of the primary nodes in the cluster must be up.

The database can lose quorum if too many nodes go down. The database's reaction to losing quorum also depends on the database's mode:

- An Enterprise Mode database that loses quorum shuts down to prevent potential data corruption.
- An Eon Mode database that loses quorum goes into read-only mode to prevent potential data corruption. In this mode, you can usually execute queries, but DDL and DML statements fail with an error.

For more on database availability, see K-safety in an Enterprise Mode database and Data integrity and high availability in an Eon Mode database .

Recovery

Vertica can restore the database to a fully functional state after one or more nodes in the system experiences a software- or hardware-related failure. Vertica recovers nodes by querying replicas of the data stored on other nodes. For example, a hardware failure can cause a node to lose database objects or to miss changes made to the database (INSERTs, UPDATEs, and so on) while offline. When the node comes back online, queries other nodes in the cluster to recover lost objects and catch up with database changes.

Referential integrity

Consists of a set of constraints (logical schema objects) that define primary key and foreign key columns.

- Each small table must have a PRIMARY KEY constraint.
- The large table must contain columns that can be used to join the large table to smaller tables.

- Outer join queries produce the same results as the corresponding inner join query if there is a FOREIGN KEY constraint on the outer table. Note that the inner table of the outer join query must always have a PRIMARY KEY constraint on its join columns.

Refresh (projections)

Ensures that all projections on a node are up-to-date (can participate in query execution). This process could take a long time, depending on how much data is in the table(s).

For more information, see Refreshing projections .

Resegmentation

A process that Vertica performs automatically during query execution that distributes the rows of an existing projection or intermediate relation evenly to each node in the cluster. At the end of resegmentation, every row from the input relation is on exactly one node. Vertica resegments data when the input does not have the segmentation required to compute the requested result efficiently and correctly.

Resource pool

A resource pool comprises a pre-allocated subset of the system resources, with an associated queue. A resource pool is created using the CREATE RESOURCE POOL command as described in the SQL Reference Manual.

Resource manager

In a single-user environment, the system can devote all resources to a single query and get the most efficient execution for that one query. However, in a environment where several concurrent queries are expected to run at once, there is tension between providing each query the maximum amount of resources (thereby getting fastest run time for that query) and serving multiple queries simultaneously with a reasonable run time. The Resource Manager provides options and controls for resolving this tension, while ensuring that every query eventually gets serviced and that true system limits are respected at all times.

Role

A role groups together a set of privileges that can be assigned to a user or another role. You can use roles to quickly grant or revoke privileges on multiple tables, schemas, functions or other database entities to one or more users with a single command.

Vertica's implementation of roles conforms to the SQL Standard T331 for basic roles.

Rollback

Transaction rollbacks restore a database to an earlier state by discarding changes made by that transaction. Statement-level rollbacks discard only the changes initiated by the reverted statements. Transaction-level rollbacks discard all changes made by the transaction.

With a ROLLBACK statement, you can explicitly roll back to a named savepoint within the transaction, or discard the entire transaction. Vertica can also initiate automatic rollbacks in two cases:

- An individual statement returns an ERROR message. In this case, Vertica rolls back the statement.
- DDL errors, systemic failures, dead locks, and resource constraints return a ROLLBACK message. In this case, Vertica rolls back the entire transaction.

Explicit and automatic rollbacks always release any locks that the transaction holds.

ROS (Read optimized store)

Read Optimized Store (ROS) is a highly optimized, read-oriented, disk storage structure, organized by projection. ROS makes heavy use of compression and indexing.

Savepoint

A *savepoint* is a special marker inside a transaction that allows commands that execute after the savepoint to be rolled back. The transaction is restored to the state that preceded the savepoint.

Vertica supports two types of savepoints:

- An *implicit savepoint* is automatically established after each successful command within a transaction. This savepoint is used to roll back the next statement if it returns an error. A transaction maintains one implicit savepoint, which it rolls forward with each successful command. Implicit savepoints are available to Vertica only and cannot be referenced directly.
- *Named savepoints are* labeled markers within a transaction that you set through SAVEPOINT statements. A named savepoint can later be referenced in the same transaction through RELEASE SAVEPOINT , which destroys it, and ROLLBACK TO SAVEPOINT , which rolls back all operations that followed the savepoint. Named savepoints can be especially useful in nested transactions: a nested transaction that begins with a savepoint can be rolled back entirely, if necessary.

Secondary subcluster

A secondary subcluster is a type of subcluster that is easy to start and shutdown on demand. In Eon Mode, Vertica does not consider the nodes in a secondary subcluster when determining whether the database has shard coverage or a quorum of nodes. You can stop or remove secondary subclusters without causing the database to go into read-only mode. See Subcluster Types and Elastic Scaling for more information.

Segmentation

Defines how physical data storage (projections) is stored in a database cluster using the CREATE PROJECTION statement. The goal is to distribute data evenly across multiple nodes in the database so that all nodes can participate in query execution.

> **Note**
> Partitioning and segmentation are terms often used interchangeably for other databases, but they have completely separate goals in Vertica regarding data localization. See Partitioning and segmentation in the Administrator's Guide for details.

Server mode

When a database is configured for TLS/SSL security in *server mode,* incoming client requests do verify the certificate of the server, but the server does not verify the clients. In Vertica, the server is the Vertica database server, and the client is any Vertica user who logs into the database. The Vertica client user may log in to the database directly in a command window, or may connect to the Vertica database server via the Management Console running in a browser.

Session

An occurrence of a user interacting with a database through the use of SQL statements. You can start a session using vsql or a JDBC application. In Vertica, the scope of a session is the same as that of a connection. Connecting to the database starts a session, and exiting ends it.

Session-scoped data is preserved beyond the lifetime of a single transaction. Terminating a session truncates a table and deletes all rows.

Shard

A subset of the data and associated metadata stored in an Eon Mode database. Shards are how Vertica divides the work of processing queries, data loads, and data maintenance between the nodes in a subcluster. Nodes **subscribe** to one or more shards. When processing a query, each node is responsible for processing the data in the shard or shards to which it subscribes.

You set the number of shards for the database during the database creation process. The number of shards cannot be changed after creathing the database.

Shards have a single **primary subscriber** in the database cluster. The primary subscriber node maintains the data in the shard by running Tuple Mover processes on it.

Shard coverage

In an Eon Mode database, nodes in a subcluster subscribe to one or more shards in communal storage. Each node handles the data in the shard or shards it subscribes to when processing queries. When a subcluster has at least one node subscribed to each shard, it has shard coverage. It is able to process queries because it has access to all of the data in the database. In a K-safe database, each subcluster has at least two nodes subscribing to each node. If the subcluster loses too many nodes in rapid succession, it may no longer have a node subscribing to each shard. In this case, the subcluster loses shard coverage and cannot process queries.

The database cluster as a whole must have at least one primary node subscribed to each shard in communal storage. This state is called having primary shard coverage. Primary nodes coordinate the maintenance of data in communal storage. If the cluster loses primary nodes to the point that it does not have at least one subscribed to each shard, it loses primary shard coverage. In this case, the database goes into read-only mode because it is unsafe to alter the data in communal storage when one or more shards do not have a primary node subscriber.

See Data integrity and high availability in an Eon Mode database .

Snapshot isolation

An historical query that gets data from the latest epoch (AT LATEST EPOCH). For details, see Historical queries .

Spread

An open source toolkit used in Vertica to provide a high performance messaging service that is resilient to network faults. Spread daemons start automatically when a database starts up for the first time, and the spread process runs on control nodes in the cluster.

Sort-merge join

If both inputs are pre-sorted, merge joins do not have to do any pre-processing. Vertica uses the term sort-merge join to refer to the case when one of the inputs must be sorted prior to the merge join. Vertica sorts the inner input side but only if the outer input side is already sorted on the join keys.

Stable functions

When run with a given set of arguments, stable functions produce the same result within a single query or scan operation. However, a stable function can produce different results when issued under different environments or at different times, such as change of locale and time zone—for example, SYSDATE .

See also Immutable (invariant) functions .

Statement

A line of SQL, excluding the semicolon. For example, the following are all statements:

```
SELECT * FROM foo WHERE bar = 6
CREATE TABLE t1 (i INT);
INSERT INTO t1 VALUES(3)
```

Storage location

A directory path used by Vertica to store catalog, actual data files, and temporary data files. You can also create storage locations for users, and then grant one or more users access to the storage. You can also create a storage location with a location label, for use in storage policies.

Storage policy

A database object you create to associate a labeled location as the default storage location for the object. Database object can be a database, schema, table, or min- and max- ranges of a partition.

Strict

Indicates that a function always returns null when any of its input arguments is null.

Subcluster

A subset of a cluster in an Eon Mode database. Subclusters isolate workloads to a group of nodes, letting you separate tasks such as load and query.

Subclusters come in two types:

- **Primary subclusters** count when Vertica determines whether the database can continue to run safely. Your database shuts down if less than half the primary nodes in your database are up, or does not have a primary node as a subscriber. Primary subclusters are best used for data loading and DDE workloads.

- **Secondary subclusters** do not count towards maintaining data integrity. You can shut them down without impacting the stability of the database. Secondary subclusters are best used for query workloads. They cannot commit transactions directly, so they are less efficient at performing data loads and DDE statements.

Superprojection

A projection that includes all columns in an anchor table. Vertica uses superprojections to ensure support for all queries and other DML operations.

Under certain conditions, Vertica automatically creates a table's superprojection immediately on table creation. Vertica also creates a superprojection when you first load data into that table, if none already exists. CREATE PROJECTION can create a superprojection if it specifies to include all table columns. A table can have multiple superprojections.

For more information, see Creating projections .

Temp location

A storage location used as temp space by Vertica.

Temp space

Disk space temporarily occupied by temporary files created by certain query execution operations, such as hash joins and sorts, in the case when they have to spill to disk. Such operations might also be encountered during queries, recovery, refreshing projections, and so on. If a temp location is provided to the database, Vertica uses it as temp space.

Top-k projection

A projection that configures the projection data for a Top-K query. A Top-K query is one that retrieves the top *k* rows from a group of tuples.

A Top-K projection is a type of live aggregate projection .

Transaction

One or more operations that are executed as a unit of work. At the user level, transactions occur in the current session by a user or script running one or more SQL statements. When you commit a transaction, any changes you make to data in tables using INSERT , DELETE , UPDATE , MERGE , and COPY during the transaction become permanent. If you roll back the transaction, all changes made to table data are undone.

Vertica supports Atomicity, Consistency, Isolation, and Durability (ACID) for SQL transactions.

Tuple mover (TM)

The Tuple Mover manages ROS data storage. On mergeout , it combines small ROS containers into larger ones and purges deleted data.

UDx

User-defined extensions (UDxs) are functions contained in external libraries that are developed in C++, Python, Java, or R using the Vertica SDK. The external libraries are defined in the Vertica catalog using the CREATE LIBRARY statement. They are best suited for analytic operations that are difficult to perform in SQL, or that need to be performed frequently enough that their speed is a major concern.

Up-to-date (projection)

A projection is up-to-date (or up to date) if it is eligible to participate in query execution. Projections on empty tables are up-to-date upon creation. If the table has data loaded already, newly created projections are marked not up-to-date until refreshed. If a projection is refreshed while a node is down, that projection can be marked up-to-date even though it is missing data on one of the nodes. This is because the node will build the data during the recovery process before participating in queries.

User-defined SQL function

User-defined SQL functions let you define and store commonly-used SQL expressions as a function. User-defined SQL functions are useful for executing complex queries and combining Vertica built-in functions. You simply call the function name you assigned in your query.

A user-defined SQL function can be used anywhere in a query where an ordinary SQL expression can be used, except in a table partition clause or the projection segmentation clause.

View

A named logical relation specified by an associated query that can be accessed similarly to a table in the FROM clause of a SQL statement. The results of the query are not stored but obtained on the fly when the SQL referencing the view is executed.

Volatile functions

Regardless of their arguments or environment, volatile functions can return a different result with each invocation—for example, UUID_GENERATE .

vsql

vsql is a character-based, interactive, front-end utility that lets you type SQL statements and see the results. It also provides a number of meta-commands and various shell-like features that facilitate writing scripts and automating a variety of tasks.

For more information, see Installing the vsql client and the more general topic, Using vsql .

Window (analytic)

An analytic function's OVER clause specifies how to partition, sort, and frame function input with respect to the current row. The input data is the result set that the query returns after it evaluates FROM , WHERE , GROUP BY , and HAVING clauses.

Working data size

The amount of data that most of your queries operate on. In most Vertica databases, you store more data than you regularly query. For example, suppose you are storing sales data for a corporation. You may keep many years of sales data in your database. However, the majority of queries you run may only query the last year of data to determine current sales trends. In that case, your working data size is the amount of sales data you load into the database in a year.

Knowing your working data size is important when configuring an Eon Mode database. You want the total size of the depots in all of the nodes a subcluster to be large enough to fit the working data size. Note that the working data size may vary per subcluster. Some subclusters may only work on recently-loaded data, while others do many queries on a larger data set.

Workload analyzer

An advisor tool that analyzes system information held in SQL system tables (monitoring APIs) and returns a set of tuning recommendations. See Analyzing workloads in the Administrator's Guide for details.

Description

The precise terms and conditions for copying, distribution and modification follow.

https://www.ansible.com/

Terms and Conditions

0. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License. An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

Apache-Arrow

https://arrow.apache.org/

Apache-arrow 0.2.0 is an early release and the APIs are still evolving.

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including

the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not

pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf

of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the

otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

Apache Avro

Version 1.7.0

Copyright © 2013 The Apache Software Foundation.

Apache Hadoop, Hadoop, HDFS, Avro, Cassandra, Chukwa, HBase, Hive, Mahout, Pig, Zookeeper are trademarks of the Apache Software Foundation.

http://avro.apache.org/

Description

Data serialization system: Apache Avro is a data serialization system. Avro provides:

- Rich data structures.
- A compact, fast, binary data format.
- A container file, to store persistent data.
- Remote procedure call (RPC).
- Simple integration with dynamic languages.

Code generation is not required to read or write data files nor to use or implement RPC protocols. Code generation as an optional optimization, only worth implementing for statically typed languages.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,

work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the

publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work

any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the

editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of

excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

   "License" shall mean the terms and conditions for use, reproduction,

and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object

form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and

attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by

the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained

within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only

on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the

outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must

distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this

of other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common

control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable

where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor

names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions

to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed

of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability

defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the

direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s)

Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,

including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without
   modifications, and in Source or Object form, provided that You
   meet the following conditions:

   (a) You must give any other recipients of the Work or
       Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices
       stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works
       that You distribute, all copyright, patent, trademark, and
       attribution notices from the Source form of the Work,
       excluding those notices that do not pertain to any part of
       the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its
       distribution, then any Derivative Works that You distribute must
       include a readable copy of the attribution notices contained
       within such NOTICE file, excluding those notices that do not
       pertain to any part of the Derivative Works, in at least one
       of the following places: within a NOTICE text file distributed
       as part of the Derivative Works; within the Source form or
       documentation, if provided along with the Derivative Works; or,
       within a display generated by the Derivative Works, if and
       wherever such third-party notices normally appear. The contents
       of the NOTICE file are for informational purposes only and
       do not modify the License. You may add Your own attribution
       notices within Derivative Works that You distribute, alongside
       or as an addendum to the NOTICE text from the Work, provided
       that such additional attribution notices cannot be construed
       as modifying the License.

   You may add Your own copyright statement to Your modifications and
   may provide additional or different license terms and conditions
   for use, reproduction, or distribution of Your modifications, or
   for any such Derivative Works as a whole, provided Your use,
   reproduction, and distribution of the Work otherwise complies with
   the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the
   origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A

PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed

as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"

replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or

for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be

liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

BLAS

Version 3.6.0, updated November 2015

Basic Linear Algebra Subprograms (BLAS) are routines that provide standard building blocks for performing basic vector and matrix operations. The Level 1 BLAS perform scalar, vector and vector-vector operations, the Level 2 BLAS perform matrix-vector operations, and the Level 3 BLAS perform matrix-matrix operations. Because the BLAS are efficient, portable, and widely available, they are commonly used in the development of high quality linear algebra software, LAPACK for example.

http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications

represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of

the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

                           Version 2.0, January 2004
                        http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

   "License" shall mean the terms and conditions for use, reproduction,
   and distribution as defined by Sections 1 through 9 of this document.

   "Licensor" shall mean the copyright owner or entity authorized by
   the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable

(except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the
   origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained

within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only

on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation

not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,

unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. ==========

FreeMarker Subcomponents with Different Copyright Owners

FreeMarker, both in its source code and binary form (freemarker.jar) includes a number of files that are licensed by the Apache Softwar Foundation under the Apache License, Version 2.0. This is the same license as the license of FreeMaker, but the copyright owner is the Apache Software Foundation. These files are:

- freemarker/ext/jsp/web-app_2_2.dtd
- freemarker/ext/jsp/web-app_2_3.dtd
- freemarker/ext/jsp/web-jsptaglibrary_1_1.dtd
- freemarker/ext/jsp/web-jsptaglibrary_1_2.dtd

Historical Notes

FreeMarker 1.x was released under the LGPL license. Later, by community consensus, we have switched over to a BSD-style license. As of FreeMarker 2.2pre1, the original author, Benjamin Geer, has relinquished the copyright in behalf of Visigoth Software Society. With FreeMarker 2.3.21 the license has changed to Apache License, Version 2.0, and the owner has changed from Visigoth Software Society to three of the FreeMarker 2.x developers, Attila Szegedi, Daniel Dekany, and Jonathan Revusky.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain

of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer,

and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Guava Libraries

Version 18.0

https://github.com/google/guava

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition,

"control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable

by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor,

except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally

submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability

incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work

or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each

Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work

(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the

Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,

and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity

exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct

or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS,

WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by

the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

you may not use this file except in compliance with the License.
You may obtain a copy of the License at

http://www.apache.org/licenses/LICENSE-2.0

Unless required by applicable law or agreed to in writing, software
distributed under the License is distributed on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.
See the License for the specific language governing permissions and
limitations under the License.

javax.el.el-api

COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL) Version 1.0

https://mvnrepository.com/artifact/javax.el/el-api

License

1. Definitions.

1.1. “Contributor” means each individual or entity that creates or contributes to the creation of Modifications.

1.2. “Contributor Version” means the combination of the Original Software, prior Modifications used by a Contributor (if any), and the Modifications made by that particular Contributor.

1.3. “Covered Software” means (a) the Original Software, or (b) Modifications, or (c) the combination of files containing Original Software with files containing Modifications, in each case including portions thereof.

1.4. “Executable” means the Covered Software in any form other than Source Code.

1.5. “Initial Developer” means the individual or entity that first makes Original Software available under this License.

1.6. “Larger Work” means a work which combines Covered Software or portions thereof with code not governed by the terms of this License.

1.7. “License” means this document.

1.8. “Licensable” means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. “Modifications” means the Source Code and Executable form of any of the following:

A. Any file that results from an addition to, deletion from or modification of the contents of a file containing Original Software or previous Modifications;

B. Any new file that contains any part of the Original Software or previous Modification; or

C. Any new file that is contributed or otherwise made available under the terms of this License.

1.10. “Original Software” means the Source Code and Executable form of computer software code that is originally released under this License.

1.11. “Patent Claims” means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.

1.12. “Source Code” means (a) the common form of computer software code in which modifications are made and (b) associated documentation included in or with such code.

1.13. “You” (or “Your”) means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License. For legal entities, “You” includes any entity which controls, is controlled by, or is under common control with You. For purposes of this definition, “control” means (a) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (b) ownership of more than fifty percent (50%) of the outstanding shares or beneficial ownership of such entity.

2. License Grants.

2.1. The Initial Developer Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, the Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Initial Developer, to use, reproduce, modify, display, perform, sublicense and distribute the Original Software (or portions thereof), with or without Modifications, and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using or selling of Original Software, to make, have made, use, practice, sell, and offer for sale, and/or otherwise dispose of the Original Software (or portions thereof).

(c) The licenses granted in Sections 2.1(a) and (b) are effective on the date Initial Developer first distributes or otherwise makes the Original Software available to a third party under the terms of this License.

(d) Notwithstanding Section 2.1(b) above, no patent license is granted: (1) for code that You delete from the Original Software, or (2) for infringements caused by: (i) the modification of the Original Software, or (ii) the combination of the Original Software with other software or devices.

2.2. Contributor Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Modifications created by such Contributor (or portions thereof), either on an unmodified basis, with other Modifications, as Covered Software and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone and/or in combination with its Contributor Version (or portions of such combination), to make, use, sell, offer for sale, have made, and/or otherwise dispose of: (1) Modifications made by that Contributor (or portions thereof); and (2) the combination of Modifications made by that Contributor with its Contributor Version (or portions of such combination).

(c) The licenses granted in Sections 2.2(a) and 2.2(b) are effective on the date Contributor first distributes or otherwise makes the Modifications available to a third party.

(d) Notwithstanding Section 2.2(b) above, no patent license is granted: (1) for any code that Contributor has deleted from the Contributor Version; (2) for infringements caused by: (i) third party modifications of Contributor Version, or (ii) the combination of Modifications made by that Contributor with other software (except as part of the Contributor Version) or other devices; or (3) under Patent Claims infringed by Covered Software in the absence of Modifications made by that Contributor.

3. Distribution Obligations.

3.1. Availability of Source Code.

Any Covered Software that You distribute or otherwise make available in Executable form must also be made available in Source Code form and that Source Code form must be distributed only under the terms of this License. You must include a copy of this License with every copy of the Source Code form of the Covered Software You distribute or otherwise make available. You must inform recipients of any such Covered Software in Executable form as to how they can obtain such Covered Software in Source Code form in a reasonable manner on or through a medium customarily used for software exchange.

3.2. Modifications.

The Modifications that You create or to which You contribute are governed by the terms of this License. You represent that You believe Your Modifications are Your original creation(s) and/or You have sufficient rights to grant the rights conveyed by this License.

3.3. Required Notices.

You must include a notice in each of Your Modifications that identifies You as the Contributor of the Modification. You may not remove or alter any copyright, patent or trademark notices contained within the Covered Software, or any notices of licensing or any descriptive text giving attribution to any Contributor or the Initial Developer.

3.4. Application of Additional Terms.

You may not offer or impose any terms on any Covered Software in Source Code form that alters or restricts the applicable version of this License or the recipients' rights hereunder. You may choose to offer, and to charge a fee for, warranty, support, indemnity or liability obligations to one or more recipients of Covered Software. However, you may do so only on Your own behalf, and not on behalf of the Initial Developer or any Contributor. You must make it absolutely clear that any such warranty, support, indemnity or liability obligation is offered by You alone, and You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of warranty, support, indemnity or liability terms You offer.

3.5. Distribution of Executable Versions.

You may distribute the Executable form of the Covered Software under the terms of this License or under the terms of a license of Your choice, which may contain terms different from this License, provided that You are in compliance with the terms of this License and that the license for the Executable form does not attempt to limit or alter the recipient's rights in the Source Code form from the rights set forth in this License. If You

distribute the Covered Software in Executable form under a different license, You must make it absolutely clear that any terms which differ from this License are offered by You alone, not by the Initial Developer or Contributor. You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of any such terms You offer.

3.6. Larger Works.

You may create a Larger Work by combining Covered Software with other code not governed by the terms of this License and distribute the Larger Work as a single product. In such a case, You must make sure the requirements of this License are fulfilled for the Covered Software.

4. Versions of the License.

4.1. New Versions.

Sun Microsystems, Inc. is the initial license steward and may publish revised and/or new versions of this License from time to time. Each version will be given a distinguishing version number. Except as provided in Section 4.3, no one other than the license steward has the right to modify this License.

4.2. Effect of New Versions.

You may always continue to use, distribute or otherwise make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. If the Initial Developer includes a notice in the Original Software prohibiting it from being distributed or otherwise made available under any subsequent version of the License, You must distribute and make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. Otherwise, You may also choose to use, distribute or otherwise make the Covered Software available under the terms of any subsequent version of the License published by the license steward.

4.3 Modified Versions.

When You are an Initial Developer and You want to create a new license for Your Original Software, You may create and use a modified version of this License if You: (a) rename the license and remove any references to the name of the license steward (except to note that the license differs from this License); and (b) otherwise make it clear that the license contains terms which differ from this License.

5. DISCLAIMER OF WARRANTY.

COVERED SOFTWARE IS PROVIDED UNDER THIS LICENSE ON AN “AS IS” BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES THAT THE COVERED SOFTWARE IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGING. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED SOFTWARE IS WITH YOU. SHOULD ANY COVERED SOFTWARE PROVE DEFECTIVE IN ANY RESPECT, YOU (NOT THE INITIAL DEVELOPER OR ANY OTHER CONTRIBUTOR) ASSUME THE COST OF ANY NECESSARY SERVICING, REPAIR OR CORRECTION. THIS DISCLAIMER OF WARRANTY CONSTITUTES AN ESSENTIAL PART OF THIS LICENSE. NO USE OF ANY COVERED SOFTWARE IS AUTHORIZED HEREUNDER EXCEPT UNDER THIS DISCLAIMER.

6. TERMINATION.

6.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 30 days of becoming aware of the breach. Provisions which, by their nature, must remain in effect beyond the termination of this License shall survive.

6.2. If You assert a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You assert such claim is referred to as “Participant”) alleging that the Participant Software (meaning the Contributor Version where the Participant is a Contributor or the Original Software where the Participant is the Initial Developer) directly or indirectly infringes any patent, then any and all rights granted directly or indirectly to You by such Participant, the Initial Developer (if the Initial Developer is not the Participant) and all Contributors under Sections 2.1 and/or 2.2 of this License shall, upon 60 days notice from Participant terminate prospectively and automatically at the expiration of such 60 day notice period, unless if within such 60 day period You withdraw Your claim with respect to the Participant Software against such Participant either unilaterally or pursuant to a written agreement with Participant.

6.3. In the event of termination under Sections 6.1 or 6.2 above, all end user licenses that have been validly granted by You or any distributor hereunder prior to termination (excluding licenses granted to You by any distributor) shall survive termination.

7. LIMITATION OF LIABILITY.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED SOFTWARE, OR ANY SUPPLIER OF ANY OF SUCH PARTIES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOST PROFITS, LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR LOSSES, EVEN IF SUCH PARTY SHALL HAVE BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. THIS LIMITATION

OF LIABILITY SHALL NOT APPLY TO LIABILITY FOR DEATH OR PERSONAL INJURY RESULTING FROM SUCH PARTY'S NEGLIGENCE TO THE EXTENT APPLICABLE LAW PROHIBITS SUCH LIMITATION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS EXCLUSION AND LIMITATION MAY NOT APPLY TO YOU.

8. U.S. GOVERNMENT END USERS.

The Covered Software is a "commercial item," as that term is defined in 48 C.F.R. 2.101 (Oct. 1995), consisting of "commercial computer software" (as that term is defined at 48 C.F.R. § 252.227-7014(a)(1)) and "commercial computer software documentation" as such terms are used in 48 C.F.R. 12.212 (Sept. 1995). Consistent with 48 C.F.R. 12.212 and 48 C.F.R. 227.7202-1 through 227.7202-4 (June 1995), all U.S. Government End Users acquire Covered Software with only those rights set forth herein. This U.S. Government Rights clause is in lieu of, and supersedes, any other FAR, DFAR, or other clause or provision that addresses Government rights in computer software under this License.

9. MISCELLANEOUS.

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. This License shall be governed by the law of the jurisdiction specified in a notice contained within the Original Software (except to the extent applicable law, if any, provides otherwise), excluding such jurisdiction's conflict-of-law provisions. Any litigation relating to this License shall be subject to the jurisdiction of the courts located in the jurisdiction and venue specified in a notice contained within the Original Software, with the losing party responsible for costs, including, without limitation, court costs and reasonable attorneys' fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which provides that the language of a contract shall be construed against the drafter shall not apply to this License. You agree that You alone are responsible for compliance with the United States export administration regulations (and the export control laws and regulation of any other countries) when You use, distribute or otherwise make available any Covered Software.

10. RESPONSIBILITY FOR CLAIMS.

As between Initial Developer and the Contributors, each party is responsible for claims and damages arising, directly or indirectly, out of its utilization of rights under this License and You agree to work with Initial Developer and Contributors to distribute such responsibility on an equitable basis. Nothing herein is intended or shall be deemed to constitute any admission of liability.

NOTICE PURSUANT TO SECTION 9 OF THE COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL)

The code released under the CDDL shall be governed by the laws of the State of California (excluding conflict-of-law provisions). Any litigation relating to this License shall be subject to the jurisdiction of the Federal Courts of the Northern District of California and the state courts of the State of California, with venue lying in Santa Clara County, California.

The GNU general public license (GPL) version 2, june 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in

either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.
7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT

LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You are entitled to receive the source code for such software. For no less than three years from the date you obtained this software package, you may download a copy of the source code for the software in this package licensed under the GPL at no charge by visiting:
http://www.vertica.com/licenses/el-api-1.1.jar

http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain

separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer,

and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

License

NOTICE; LIMITED LICENSE GRANTS

Sun Microsystems, Inc. ('Sun') hereby grants you a fully-paid, non-exclusive, non-transferable, worldwide, limited license (without the right to sublicense), under the Sun's applicable intellectual property rights to view, download, use and reproduce the Specification only for the purpose of internal evaluation, which shall be understood to include developing applications intended to run on an implementation of the Specification provided that such applications do not themselves implement any portion(s) of the Specification.

Sun also grants you a perpetual, non-exclusive, worldwide, fully paid-up, royalty free, limited license (without the right to sublicense) under any applicable copyrights or patent rights it may have in the Specification to create and/or distribute an Independent Implementation of the Specification that: (i) fully implements the Spec(s) including all its required interfaces and functionality; (ii) does not modify, subset, superset or otherwise extend

the Licensor Name Space, or include any public or protected packages, classes, Java interfaces, fields or methods within the Licensor Name Space other than those required/authorized by the Specification or Specifications being implemented; and (iii) passes the TCK (including satisfying the requirements of the applicable TCK Users Guide) for such Specification. The foregoing license is expressly conditioned on your not acting outside its scope. No license is granted hereunder for any other purpose.

You need not include limitations (i)-(iii) from the previous paragraph or any other particular 'pass through' requirements in any license You grant concerning the use of your Independent Implementation or products derived from it. However, except with respect to implementations of the Specification (and products derived from them) that satisfy limitations (i)-(iii) from the previous paragraph, You may neither: (a) grant or otherwise pass through to your licensees any licenses under Sun's applicable intellectual property rights; nor (b) authorize your licensees to make any claims concerning their implementation's compliance with the Spec in question.

For the purposes of this Agreement: 'Independent Implementation' shall mean an implementation of the Specification that neither derives from any of Sun's source code or binary code materials nor, except with an appropriate and separate license from Sun, includes any of Sun's source code or binary code materials; and 'Licensor Name Space' shall mean the public class or interface declarations whose names begin with 'java', 'javax', 'com.sun' or their equivalents in any subsequent naming convention adopted by Sun through the Java Community Process, or any recognized successors or replacements thereof.

This Agreement will terminate immediately without notice from Sun if you fail to comply with any material provision of or act outside the scope of the licenses granted above.

TRADEMARKS

No right, title, or interest in or to any trademarks, service marks, or trade names of Sun or Sun's licensors is granted hereunder. Sun, Sun Microsystems, the Sun logo, Java, and the Java Coffee Cup logo are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and other countries.

DISCLAIMER OF WARRANTIES

THE SPECIFICATION IS PROVIDED 'AS IS'. SUN MAKES NO REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT, THAT THE CONTENTS OF THE SPECIFICATION ARE SUITABLE FOR ANY PURPOSE OR THAT ANY PRACTICE OR IMPLEMENTATION OF SUCH CONTENTS WILL NOT INFRINGE ANY THIRD PARTY PATENTS, COPYRIGHTS, TRADE SECRETS OR OTHER RIGHTS. This document does not represent any commitment to release or implement any portion of the Specification in any product.

THE SPECIFICATION COULD INCLUDE TECHNICAL INACCURACIES OR TYPOGRAPHICAL ERRORS. CHANGES ARE PERIODICALLY ADDED TO THE INFORMATION THEREIN; THESE CHANGES WILL BE INCORPORATED INTO NEW VERSIONS OF THE SPECIFICATION, IF ANY. SUN MAY MAKE IMPROVEMENTS AND/OR CHANGES TO THE PRODUCT(S) AND/OR THE PROGRAM(S) DESCRIBED IN THE SPECIFICATION AT ANY TIME. Any use of such changes in the Specification will be governed by the then-current license for the applicable version of the Specification.

LIMITATION OF LIABILITY

TO THE EXTENT NOT PROHIBITED BY LAW, IN NO EVENT WILL SUN OR ITS LICENSORS BE LIABLE FOR ANY DAMAGES, INCLUDING WITHOUT LIMITATION, LOST REVENUE, PROFITS OR DATA, OR FOR SPECIAL, INDIRECT, CONSEQUENTIAL, INCIDENTAL OR PUNITIVE DAMAGES, HOWEVER CAUSED AND REGARDLESS OF THE THEORY OF LIABILITY, ARISING OUT OF OR RELATED TO ANY FURNISHING, PRACTICING, MODIFYING OR ANY USE OF THE SPECIFICATION, EVEN IF SUN AND/OR ITS LICENSORS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You will indemnify, hold harmless, and defend Sun and its licensors from any claims arising or resulting from: (i) your use of the Specification; (ii) the use or distribution of your Java application, applet and/or clean room implementation; and/or (iii) any claims that later versions or releases of any Specification furnished to you are incompatible with the Specification provided to you under this license.

RESTRICTED RIGHTS LEGEND

U.S. Government: If this Specification is being acquired by or on behalf of the U.S. Government or by a U.S. Government prime contractor or subcontractor (at any tier), then the Government's rights in the Software and accompanying documentation shall be only as set forth in this license; this is in accordance with 48 C.F.R. 227.7201 through 227.7202-4 (for Department of Defense (DoD) acquisitions) and with 48 C.F.R. 2.101 and 12.212 (for non-DoD acquisitions).

REPORT

You may wish to report any ambiguities, inconsistencies or inaccuracies you may find in connection with your use of the Specification ('Feedback'). To the extent that you provide Sun with any Feedback, you hereby: (i) agree that such Feedback is provided on a non-proprietary and non-confidential basis, and (ii) grant Sun a perpetual, non-exclusive, worldwide, fully paid-up, irrevocable license, with the right to sublicense through multiple levels of sublicensees, to incorporate, disclose, and use without limitation the Feedback for any purpose related to the Specification and future versions, implementations, and test suites thereof.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Jetty

Copyright ©, Eclipse Foundation

https://www.eclipse.org/jetty/

License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement , including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY

WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a

file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a

Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a

incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate

the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

modification, are permitted provided that the following conditions are

met:

- Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE COPYRIGHT HOLDER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Downloading of this software may constitute an export of cryptographic software from the United States of America that is subject to the United States Export Administration Regulations (EAR), 15 CFR 730-774.

Additional laws or regulations may apply. It is the responsibility of the person or entity contemplating export to comply with all applicable export laws and regulations, including obtaining any required license from the U.S. government.

The U.S. government prohibits export of encryption source code to certain countries and individuals, including, but not limited to, the countries of Cuba, Iran, North Korea, Sudan, Syria, and residents and nationals of those countries.

Documentation components of this software distribution are licensed under a Creative Commons Attribution-ShareAlike 3.0 Unported License. (http://creativecommons.org/licenses/by-sa/3.0/)

Individual source code files are copyright MIT, Cygnus Support, Novell, OpenVision Technologies, Oracle, Red Hat, Sun Microsystems, FundsXpress, and others.

Project Athena, Athena, Athena MUSE, Discuss, Hesiod, Kerberos, Moira, and Zephyr are trademarks of the Massachusetts Institute of Technology (MIT). No commercial use of these trademarks may be made without prior written permission of MIT. "Commercial use" means use of a name in a product or other for-profit manner. It does NOT prevent a commercial firm from referring to the MIT trademarks in order to convey information (although in doing so, recognition of their trademark status should be given).

==

The following copyright and permission notice applies to the OpenVision Kerberos Administration system located in "kadmin/create", "kadmin/dbutil", "kadmin/passwd", "kadmin/server", "lib/kadm5", and portions of "lib/rpc":

Copyright, OpenVision Technologies, Inc., 1993-1996, All Rights Reserved

WARNING: Retrieving the OpenVision Kerberos Administration system source code, as described below, indicates your acceptance of the following terms. If you do not agree to the following terms, do not retrieve the OpenVision Kerberos administration system. You may freely use and distribute the Source Code and Object Code compiled from it, with or without modification, but this Source Code is provided to you "AS IS" EXCLUSIVE OF ANY WARRANTY, INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, OR ANY OTHER WARRANTY, WHETHER EXPRESS OR IMPLIED. IN NO EVENT WILL OPENVISION HAVE ANY LIABILITY FOR ANY LOST PROFITS, LOSS OF DATA OR COSTS OF PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, OR FOR ANY SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES ARISING OUT OF THIS AGREEMENT, INCLUDING, WITHOUT LIMITATION, THOSE RESULTING FROM THE USE OF THE SOURCE CODE, OR THE FAILURE OF THE SOURCE CODE TO PERFORM, OR FOR ANY OTHER REASON.

OpenVision retains all copyrights in the donated Source Code.

OpenVision also retains copyright to derivative works of the Source Code, whether created by OpenVision or by a third party. The OpenVision copyright notice must be preserved if derivative works are made based on the donated Source Code.

OpenVision Technologies, Inc. has donated this Kerberos Administration system to MIT for inclusion in the standard Kerberos 5 distribution. This donation underscores our commitment to continuing Kerberos technology development and our gratitude for the valuable work which has been performed by MIT and the Kerberos community.

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed

as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"

replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

See the License for the specific language governing permissions and
limitations under the License.

LAPACK

Version:3.4.0

Updated November 11, 2011

https://github.com/Reference-LAPACK

LAPACK is written in Fortran77 and provides routines for solving systems of simultaneous linear equations, least-squares solutions of linear systems of equations, eigenvalue problems, and singular value problems. The associated matrix factorizations (LU, Cholesky, QR, SVD, Schur, generalized Schur) are also provided, as are related computations such as reordering of the Schur factorizations and estimating condition numbers. Dense and banded matrices are handled, but not general sparse matrices. In all areas, similar functionality is provided for real and complex matrices, in both single and double precision. Vertica statically links this to other code (compiled code co-mingled in the same binary files).

BSD 3-clause "new" or "revised" license

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

* Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

* Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

* Neither the name of Google Inc. nor the names of its contributors may be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. libgfortran

Open source component version 4.8.2

Description

The libgfortran contains a Fortran shared library, needed to run Fortran dynamically-linked programs, required for the Vertica LAPACK library addition.

https://github.com/gcc-mirror/gcc/tree/master/libgfortran

License

The GNU General Public License (GPL) with Special Library Exception

The author has provided an exception to the GPL allowing the library to be linked with other programs provided that some specific conditions are met. Refer to the license text.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License

and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

libio

Version 1.0

Copyright (c) 2013 Joos Kiener < Joos.Kiener@gmail.com >

Description

IO: Classe(s) for improving IO in Java. Currently there is only 1 class in this library.

OptimizedRandomAccessFile: java.io.RandomAccessFile has a readLine() method with terrible performance. It reads files byte per byte and that is very slow. OptimizedRandomAccessFile wraps java.io.RandomAccessFile and exposes all methods while having a readLine() method that performs similar to java.io.BufferedReader and hence about 100 times faster than that of java.io.RandomAccessFile while preserving correct random access.

This software consists of voluntary contributions made by many individuals (AUTHORS.txt, http://jqueryui.com/about) For exact contribution history, see the revision history and logs, available at http://jquery-ui.googlecode.com/svn/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,

the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its

distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity,

or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for he work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.When you convey a covered work, you waive any legal power to forbid

circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at nocharge under subsection 6d.A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

Libopencsv-Java

Copyright © 1999-2012 The Apache Software Foundation. All Rights Reserved.

Version 2.3

https://packages.debian.org/sid/libopencsv-java

Description

opencsv - Library for reading and writing CSV in Java

Opencsv is a very simple csv (comma-separated values) parser library for Java. It supports all the basic csv-type things you're likely to want to do:

- Arbitrary numbers of values per line
- Ignoring commas in quoted elements
- Handling quoted entries with embedded carriage returns (ie entries that span multiple lines)
- Configurable separator and quote characters (or use sensible defaults)
- Read all the entries at once, or use an Iterator style model
- Creating csv files from String[] (ie. automatic escaping of embeddedquote chars)

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions

to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one

of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

librdkafka-dev

Version 0.11.6

Copyright (c) 2012-2018, Magnus Edenhill

https://packages.debian.org/sid/librdkafka-dev

Description

Library implementing the Apache Kafka protocol (development headers), librdkafka is a C implementation of the Apache Kafka protocol. It currently implements the 0.8 version of the protocol and can be used to develop both Producers and Consumers.

More information about Apache Kafka can be found at http://kafka.apache.org/

This package contains the development headers.

libsnappy1

Version 1.1.2

Copyright (c) 2015

https://packages.debian.org/search?keywords=libsnappy1

Description

Snappy (libsnappy1) is a compression/decompression library. It does not aim for maximum compression, or compatibility with any other compression library; instead, it aims for very high speeds and reasonable compression. For instance, compared to the fastest mode of zlib, Snappy is an order of magnitude faster for most inputs, but the resulting compressed files are anywhere from 20% to 100% bigger. On a single core of a Core i7 processor in 64-bit mode, Snappy compresses at about 250 MB/sec or more and decompresses at about 500 MB/sec or more.

Snappy is widely used inside Google, in everything from BigTable and MapReduce to our internal RPC systems. (Snappy has previously been referred to as “Zippy” in some presentations and the likes.)

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical

transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You

meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and

subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the

same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or

Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special,

incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and

that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor

other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual,

worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed

with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

lz4

LZ4 is a lossless compression algorithm.

https://github.com/lz4/lz4

Licenses

This repository uses 2 different licenses :

- all files in the lib directory use a BSD 2-Clause license

- all other files use a GPLv2 license, unless explicitly stated otherwise

Relevant license is reminded at the top of each source file, and with presence of COPYING or LICENSE file in associated directories.

This model is selected to emphasize that files in the lib directory are designed to be included into 3rd party applications, while all other files, in programs , tests or examples , receive more limited attention and support for such scenario.

BSD 2-clause "Simplified" License

The GNU general public license (GPL) version 2, june 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.
7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Math-Atlas

Open source component version: 3.11.30

Vertica LAPACK library addition. ATLAS (Automatically Tuned Linear Algebra Software) provides optimized Linear Algebra kernels for arbitrary cache-based architectures. ATLAS provides ANSI C and Fortran77 interfaces for the entire BLAS API, and a small portion of the LAPACK AP.

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without

modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the

Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside

or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but

not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,

whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

OpenJDK

Version 7u181

Copyright (c) 2013-2018 Azul Systems

https://www.azul.com/downloads/zulu/

OpenJDK Trademark Notice

Version 1.21, 2017/12/19

OpenJDK (the "Name") is a trademark of Oracle America, Inc. ("Oracle")
(the "Trademark Owner").

Trademark Owner publishes source code (the "Original Software") at several World Wide Web locations (each a "Website"). These locations include:

http://download.java.net/openjdk/jdk6
http://download.java.net/openjdk/jdk7
http://download.java.net/openjdk/jdk8
http://hg.openjdk.java.net/jdk6
http://hg.openjdk.java.net/jdk7
http://hg.openjdk.java.net/jdk7u
http://hg.openjdk.java.net/jdk8
http://hg.openjdk.java.net/jdk8u
http://hg.openjdk.java.net/jdk9
http://hg.openjdk.java.net/jdk10
http://hg.openjdk.java.net/jdk
http://hg.openjdk.java.net/jdk-updates

as well as any successor locations designated by Trademark Owner in future revisions of this Notice.

Each Website provides Original Software in two parts: A Java virtual machine (the "Virtual Machine") and an API library and tools (the "Library and Tools").

Trademark Owner permits any person obtaining a copy of this software (the "Software") that is based on Original Software to use the Name in the package names and version strings of the Software subject to the following conditions:

(1) The Software is a substantially complete implementation of the OpenJDK development kit or runtime environment source code retrieved from a single Website, and the vast majority of the Software code is identical to that upstream Original Software, except that:

(a) Changes required to port Original Software to new operating systems or hardware architectures are permitted, so long as that work takes place in the context of an approved Project hosted in the OpenJDK Community; and

(b) A Virtual Machine from one Website may be combined with the Library and Tools of another Website, so long as the vast majority of the code in each is identical to the corresponding upstream Virtual Machine or Library and Tools component.

(2) No permission is hereby granted to use the Name in any other manner, unless such use constitutes "fair use", for example "based on the OpenJDK source code" or "DistroXYZ's packaging of the OpenJDK 6 code".

(3) Trademark Owner makes no warranties of any kind respecting the Name, and all representations and warranties, including any implied warranty of merchantability, fitness for a particular purpose or non-infringement are hereby disclaimed.

(4) Finally, this notice and the following legend are included in all copies of the Software or portions of it:

Java and OpenJDK are trademarks or registered trademarks of Oracle and/or its affiliates.

Trademark Owner intends to revise this Notice as necessary in order to meet the needs of the OpenJDK Community. Revisions to this notice will be announced on the public mailing list announce at openjdk.java.net, to which you may subscribe by visiting http://mail.openjdk.java.net. Please send questions or comments about this Notice to the discuss list at the same location.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes

represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing

the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common

control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work,

where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade

names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims

against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement , including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement , including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted"

means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and

wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation

including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without
   modifications, and in Source or Object form, provided that You
   meet the following conditions:

   (a) You must give any other recipients of the Work or
       Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices
       stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works
       that You distribute, all copyright, patent, trademark, and
       attribution notices from the Source form of the Work,
       excluding those notices that do not pertain to any part of
       the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its
       distribution, then any Derivative Works that You distribute must
       include a readable copy of the attribution notices contained
       within such NOTICE file, excluding those notices that do not
       pertain to any part of the Derivative Works, in at least one
       of the following places: within a NOTICE text file distributed
       as part of the Derivative Works; within the Source form or
       documentation, if provided along with the Derivative Works; or,
       within a display generated by the Derivative Works, if and
       wherever such third-party notices normally appear. The contents
       of the NOTICE file are for informational purposes only and
       do not modify the License. You may add Your own attribution
       notices within Derivative Works that You distribute, alongside
       or as an addendum to the NOTICE text from the Work, provided
       that such additional attribution notices cannot be construed
       as modifying the License.

   You may add Your own copyright statement to Your modifications and
   may provide additional or different license terms and conditions
   for use, reproduction, or distribution of Your modifications, or
   for any such Derivative Works as a whole, provided Your use,
   reproduction, and distribution of the Work otherwise complies with
   the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the
   origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the

appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

License

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement , including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of

the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work

cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each

agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

Perl Artistic License

Copyright © August 15, 1997

https://www.perlfoundation.org/artistic-license-20.html

License

Preamble

The intent of this document is to state the conditions under which a Package may be copied, such that the Copyright Holder maintains some semblance of artistic control over the development of the package, while giving the users of the package the right to use and distribute the Package in a more-or-less customary fashion, plus the right to make reasonable modifications.

Definitions

"Package" refers to the collection of files distributed by the Copyright Holder, and derivatives of that collection of files created through textual modification.

"Standard Version" refers to such a Package if it has not been modified, or has been modified in accordance with the wishes of the Copyright Holder as specified below.

"Copyright Holder" is whoever is named in the copyright or copyrights for the package.

"You" is you, if you're thinking about copying or distributing this Package.

"Reasonable copying fee" is whatever you can justify on the basis of media cost, duplication charges, time of people involved, and so on. (You will not be required to justify it to the Copyright Holder, but only to the computing community at large as a market that must bear the fee.)

"Freely Available" means that no fee is charged for the item itself, though there may be fees involved in handling the item. It also means that recipients of the item may redistribute it under the same conditions they received it.

1. You may make and give away verbatim copies of the source form of the Standard Version of this Package without restriction, provided that you duplicate all of the original copyright notices and associated disclaimers.
2. You may apply bug fixes, portability fixes and other modifications derived from the Public Domain or from the Copyright Holder. A Package modified in such a way shall still be considered the Standard Version.
3. You may otherwise modify your copy of this Package in any way, provided that you insert a prominent notice in each changed file stating how and when you changed that file, and provided that you do at least ONE of the following:
4. place your modifications in the Public Domain or otherwise make them Freely Available, such as by posting said modifications to Usenet or an equivalent medium, or placing the modifications on a major archive site such as uunet.uu.net, or by allowing the Copyright Holder to include your modifications in the Standard Version of the Package.
    1. use the modified Package only within your corporation or organization.
    2. rename any nonstandard executables so the names do not conflict with standard executables, which must also be provided, and provide a separate manual page for each nonstandard executable that clearly documents how it differs from the Standard Version.
    3. make other distribution arrangements with the Copyright Holder.
5. You may distribute the programs of this Package in object code or executable form, provided that you do at least ONE of the following:
    1. distribute a Standard Version of the executables and library files, together with instructions (in the manual page or equivalent) on where to get the Standard Version.
    2. accompany the distribution with the machine-readable source of the Package with your modifications.
    3. give nonstandard executables nonstandard names, and clearly document the differences in manual pages (or equivalent), together with instructions on where to get the Standard Version.
    4. make other distribution arrangements with the Copyright Holder.
6. You may charge a reasonable copying fee for any distribution of this Package. You may charge any fee you choose for support of this Package. You may not charge a fee for this Package itself. However, you may distribute this Package in aggregate with other (possibly commercial) programs as part of a larger (possibly commercial) software distribution provided that you do not advertise this Package as a product of your own. You may embed this Package's interpreter within an executable of yours (by linking); this shall be construed as a mere form of aggregation, provided that the complete Standard Version of the interpreter is so embedded.
7. The scripts and library files supplied as input to or produced as output from the programs of this Package do not automatically fall under the copyright of this Package, but belong to whomever generated them, and may be sold commercially, and may be aggregated with this Package. If such scripts or library files are aggregated with this Package via the so-called "undump" or "unexec" methods of producing a binary executable image, then distribution of such an image shall neither be construed as a distribution of this Package nor shall it fall under the restrictions of Paragraphs 3 and 4, provided that you do not represent such an executable image as a Standard Version of this Package.
8. C subroutines (or comparably compiled subroutines in other languages) supplied by you and linked into this Package in order to emulate subroutines and variables of the language defined by this Package shall not be considered part of this Package, but are the equivalent of input as in Paragraph 6, provided these subroutines do not change the language in any way that would cause it to fail the regression tests for the language.
9. Aggregation of this Package with a commercial distribution is always permitted provided that the use of this Package is embedded; that is, when no overt attempt is made to make this Package's interfaces visible to the end user of the commercial distribution. Such use shall not be construed as a distribution of this Package.
10. The name of the Copyright Holder may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS PACKAGE IS PROVIDED "AS IS" AND WITHOUT ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTIBILITY AND FITNESS FOR A PARTICULAR PURPOSE.

protobuf

Copyright 2008 Google Inc. All rights reserved.

Version 2.4.1, 2.6.0

https://github.com/protocolbuffers/protobuf

Description

Protocol Buffers - Google's data interchange format.

Protocol Buffers are a way of encoding structured data in an efficient yet extensible format. Google uses Protocol Buffers for almost all of its internal RPC protocols and file formats. Protocol buffers are a flexible, efficient, automated mechanism for serializing structured data—think XML, but smaller, faster, and simpler. You define how you want your data to be structured once, then you can use special generated source code to easily write and read your structured data to and from a variety of data streams and using a variety of languages. You can even update your data structure without breaking deployed programs that are compiled against the "old" format.

Python

Copyright © 2001- 2012 Python Software Foundation; All Rights Reserved

This is the official license for the Python 2.7.* release.

Description

Interactive high-level object-oriented language (default version).

Python, the high-level, interactive object oriented language, includes an extensive class library with lots of goodies for network programming, system administration, sounds and graphics.

This package is a dependency package, which depends on Debian's default Python version (currently v2.7).

History of the software

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl/) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us/) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation; see http://www.zope.com/). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org / for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

Release	Derived from	Year	Owner	GPL-compatible? (1)
0.9.0 thru 1.2		1991-1995	CWI	yes
1.3 thru 1.5.2	1.2	1995-1999	CNRI	yes
1.6	1.5.2	2000	CNRI	no
2.0	1.6	2000	BeOpen.com	no
1.6.1	1.6	2001	CNRI	yes (2)
2.1	2.0+1.6.1	2001	PSF	no
2.0.1	2.0+1.6.1	2001	PSF	yes
2.1.1	2.1+2.0.1	2001	PSF	yes
2.2	2.1.1	2001	PSF	yes
2.1.2	2.1.1	2002	PSF	yes
2.1.3	2.1.2	2002	PSF	yes
2.2.1	2.2	2002	PSF	yes
2.2.2	2.2.1	2002	PSF	yes
2.2.3	2.2.2	2003	PSF	yes
2.3	2.2.2	2002-2003	PSF	yes
2.3.1	2.3	2002-2003	PSF	yes
2.3.2	2.3.1	2002-2003	PSF	yes
2.3.3	2.3.2	2002-2003	PSF	yes
2.3.4	2.3.3	2004	PSF	yes
2.3.5	2.3.4	2005	PSF	yes
2.4	2.3	2004	PSF	yes
2.4.1	2.4	2005	PSF	yes
2.4.2	2.4.1	2005	PSF	yes
2.4.3	2.4.2	2006	PSF	yes
2.5	2.4	2006	PSF	yes
2.7	2.6	2010	PSF	yes

Note

1. GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don't.

   2. According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

Terms and conditions for accessing or otherwise using Python

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, PSFhereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.
3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.
4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com ("BeOpen"), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization ("Licensee") accessing and otherwise using this software in source or binary form and its associated documentation ("the Software").
2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.
3. BeOpen is making the Software available to Licensee on an "AS IS" basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the "BeOpen Python" logos available at http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.
7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 ("CNRI"), and the Individual or Organization ("Licensee") accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI's License Agreement and CNRI's notice of copyright, i.e., "Copyright © 1995-2001 Corporation for National Research Initiatives; All Rights Reserved" are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI's License Agreement, Licensee may substitute the following text (omitting the quotes): "Python 1.6.1 is made available subject to the terms and conditions in CNRI's License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013 ."
3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.
4. CNRI is making Python 1.6.1 available to Licensee on an "AS IS" basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the “ACCEPT” button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

ACCEPT

Permission to use, copy, modify, and distribute this software and its documentation for any purpose and without fee is hereby granted, provided that the above copyright notice appear in all copies and that both that copyright notice and this permission notice appear in supporting documentation, and that the name of Stichting Mathematisch Centrum or CWI not be used in advertising or publicity pertaining to distribution of the software without specific, written prior permission.

STICHTING MATHEMATISCH CENTRUM DISCLAIMS ALL WARRANTIES WITH REGARD TO THIS SOFTWARE, INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS, IN NO EVENT SHALL STICHTING MATHEMATISCH CENTRUM BE LIABLE FOR ANY SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER IN AN ACTION OF CONTRACT, NEGLIGENCE OR OTHER TORTIOUS ACTION, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

Python3

A. HISTORY OF THE SOFTWARE

==========

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation, see http://www.zope.com). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

Release Derived Year Owner GPL-from compatible? (1)

0.9.0 thru 1.2 1991-1995 CWI yes

1.3 thru 1.5.2 1.2 1995-1999 CNRI yes

1.6 1.5.2 2000 CNRI no

2.0 1.6 2000 BeOpen.com no

1.6.1 1.6 2001 CNRI yes (2)

2.1 2.0+1.6.1 2001 PSF no

2.0.1 2.0+1.6.1 2001 PSF yes

2.1.1 2.1+2.0.1 2001 PSF yes

2.1.2 2.1.1 2002 PSF yes

2.1.3 2.1.2 2002 PSF yes

2.2 and above 2.1.1 2001-now PSF yes

Footnotes:

(1) GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with othersoftware that is released under the GPL; the others don't.

(2) According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

B. TERMS AND CONDITIONS FOR ACCESSING OR OTHERWISE USING PYTHON

==========

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

---

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, PSF hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.
3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.
4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com ("BeOpen"), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization ("Licensee") accessing and otherwise using this software in source or binary form and its associated documentation ("the Software").
2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.
3. BeOpen is making the Software available to Licensee on an "AS IS" basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the "BeOpen Python" logos available at http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.
7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

---

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 ("CNRI"), and the Individual or Organization ("Licensee") accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1

alone or in any derivative version, provided, however, that CNRI's License Agreement and CNRI's notice of copyright, i.e., "Copyright (c) 1995-2001 Corporation for National Research Initiatives; All Rights Reserved" are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI's License Agreement, Licensee may substitute the following text (omitting the quotes): "Python 1.6.1 is made available subject to the terms and conditions in CNRI's License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013" .

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.
4. CNRI is making Python 1.6.1 available to Licensee on an "AS IS" basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By clicking on the "ACCEPT" button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes

of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer

the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for he work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.When you convey a covered work, you waive any legal power to forbid

circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at nocharge under subsection 6d.A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the

work. For example, Corresponding Source includes interface definition files associated with source files for he work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.When you convey a covered work, you waive any legal power to forbid

circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

a) The work must carry prominent notices stating that you modified it, and giving a relevant date.

b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"

c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at nocharge under subsection 6d.A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d) Limiting the use for publicity purposes of names of licensors or authors of the material; or

e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but

not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise

whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

License

The GNU general public license (GPL) version 2, june 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.
7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

FLOSS License Exception

(Adapted from http://www.mysql.com/company/legal/licensing/foss-exception.html)

I want specified Free/Libre and Open Source Software ("FLOSS") applications to be able to use specified GPL-licensed RRDtool libraries (the "Program") despite the fact that not all FLOSS licenses are compatible with version 2 of the GNU General Public License (the "GPL").

As a special exception to the terms and conditions of version 2.0 of the GPL:

You are free to distribute a Derivative Work that is formed entirely from the Program and one or more works (each, a "FLOSS Work") licensed under one or more of the licenses listed below, as long as:

1. You obey the GPL in all respects for the Program and the Derivative Work, except for identifiable sections of the Derivative Work which are not derived from the Program, and which can reasonably be considered independent and separate works in themselves
2. All identifiable sections of the Derivative Work which are not derived from the Program, and which can reasonably be considered independent and separate works in themselves
    - are distributed subject to one of the FLOSS licenses listed below, and
    - the object code or executable form of those sections are accompanied by the complete corresponding machine-readable source code for those sections on the same medium and under the same FLOSS license as the corresponding object code or executable forms of those sections.
3. Any works which are aggregated with the Program or with a Derivative Work on a volume of a storage or distribution medium in accordance with the GPL, can reasonably be considered independent and separate works in themselves which are not derivatives of either the Program, a Derivative Work or a FLOSS Work.

If the above conditions are not met, then the Program may only be copied, modified, distributed or used under the terms and conditions of the GPL.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses

or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or

WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the

otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You

with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,

including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without
   modifications, and in Source or Object form, provided that You
   meet the following conditions:

   (a) You must give any other recipients of the Work or
       Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices
       stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works
       that You distribute, all copyright, patent, trademark, and
       attribution notices from the Source form of the Work,
       excluding those notices that do not pertain to any part of
       the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its
       distribution, then any Derivative Works that You distribute must
       include a readable copy of the attribution notices contained
       within such NOTICE file, excluding those notices that do not
       pertain to any part of the Derivative Works, in at least one
       of the following places: within a NOTICE text file distributed
       as part of the Derivative Works; within the Source form or
       documentation, if provided along with the Derivative Works; or,
       within a display generated by the Derivative Works, if and
       wherever such third-party notices normally appear. The contents
       of the NOTICE file are for informational purposes only and
       do not modify the License. You may add Your own attribution
       notices within Derivative Works that You distribute, alongside
       or as an addendum to the NOTICE text from the Work, provided
       that such additional attribution notices cannot be construed
       as modifying the License.

   You may add Your own copyright statement to Your modifications and
   may provide additional or different license terms and conditions
   for use, reproduction, or distribution of Your modifications, or
   for any such Derivative Works as a whole, provided Your use,
   reproduction, and distribution of the Work otherwise complies with
   the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the
   origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A

PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed

as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"

replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but

not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,

whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Spring Framework Spring Aspects

Spring Framework Spring Aspects 4.0.9

https://mvnrepository.com/artifact/org.springframework/spring-aspects/4.0.9.RELEASE

License

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or

Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a

incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the
   origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill,

work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

SNMP

Various copyrights apply to this package, listed in various separate parts below. Please make sure that you read all the parts. Up until 2001, the project was based at UC Davis, and the first part covers all code written during this time. From 2001 onwards, the project has been based at SourceForge, and Networks Associates Technology, Inc hold the copyright on behalf of the wider Net-SNMP community, covering all derivative work done since then. An additional copyright section has been added as Part 3 below also under a BSD license for the work contributed by Cambridge Broadband Ltd. to the project since 2001. An additional copyright section has been added as Part 4 below also under a BSD license for the work contributed by Sun Microsystems, Inc. to the project since 2003.

Code has been contributed to this project by many people over the years it has been in development, and a full list of contributors can be found in the README file under the THANKS section.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of,

publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work

or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

   You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each

Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the

Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

   (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside

or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

History of the software

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see http://www.cwi.nl/) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see http://www.cnri.reston.va.us/) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation; see http://www.zope.com/). In 2001, the Python Software Foundation (PSF, see http://www.python.org/psf/) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see http://www.opensource.org / for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

Release	Derived from	Year	Owner	GPL-compatible? (1)
0.9.0 thru 1.2		1991-1995	CWI	yes
1.3 thru 1.5.2	1.2	1995-1999	CNRI	yes
1.6	1.5.2	2000	CNRI	no
2.0	1.6	2000	BeOpen.com	no
1.6.1	1.6	2001	CNRI	yes (2)
2.1	2.0+1.6.1	2001	PSF	no
2.0.1	2.0+1.6.1	2001	PSF	yes
2.1.1	2.1+2.0.1	2001	PSF	yes
2.2	2.1.1	2001	PSF	yes
2.1.2	2.1.1	2002	PSF	yes
2.1.3	2.1.2	2002	PSF	yes
2.2.1	2.2	2002	PSF	yes
2.2.2	2.2.1	2002	PSF	yes
2.2.3	2.2.2	2003	PSF	yes
2.3	2.2.2	2002-2003	PSF	yes
2.3.1	2.3	2002-2003	PSF	yes
2.3.2	2.3.1	2002-2003	PSF	yes
2.3.3	2.3.2	2002-2003	PSF	yes
2.3.4	2.3.3	2004	PSF	yes
2.3.5	2.3.4	2005	PSF	yes
2.4	2.3	2004	PSF	yes
2.4.1	2.4	2005	PSF	yes
2.4.2	2.4.1	2005	PSF	yes
2.4.3	2.4.2	2006	PSF	yes
2.5	2.4	2006	PSF	yes
2.7	2.6	2010	PSF	yes

Note

1. GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don't.

   2. According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

Terms and conditions for accessing or otherwise using Python

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, PSFhereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.
3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.
4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com ("BeOpen"), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization ("Licensee") accessing and otherwise using this software in source or binary form and its associated documentation ("the Software").
2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.
3. BeOpen is making the Software available to Licensee on an "AS IS" basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the "BeOpen Python" logos available at http://www.pythonlabs.com/logos.html may be used according to the permissions granted on that web page.
7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 ("CNRI"), and the Individual or Organization ("Licensee") accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI's License Agreement and CNRI's notice of copyright, i.e., "Copyright © 1995-2001 Corporation for National Research Initiatives; All Rights Reserved" are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI's License Agreement, Licensee may substitute the following text (omitting the quotes): "Python 1.6.1 is made available subject to the terms and conditions in CNRI's License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: http://hdl.handle.net/1895.22/1013 ."
3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.
4. CNRI is making Python 1.6.1 available to Licensee on an "AS IS" basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the “ACCEPT” button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

ACCEPT

WiX

Copyright 2006-1015 Microsoft

Version 3.9

Microsoft Reciprocal License (Ms-RL)

Description

WiX Toolset License

The WiX toolset is released under the Microsoft Reciprocal License (MS-RL). A reciprocal license is used to ensure that others who build on the effort of the WiX community give back to the WiX community. Specifically the license changes and improvements to the WiX toolset must be published using the same license.

Sometimes the reciprocal license is incorrectly interpreted to also apply to bundles, packages, custom actions built using the WiX toolset. The Outercurve Foundation has provided this statement to clarify:

The WiX toolset (WiX) is licensed under the Microsoft Reciprocal License (MS-RL). The MS-RL governs the distribution of the software licensed under it, as well as derivative works, and incorporates the definition of a derivative work provided in U.S. copyright law. OuterCurve Foundation does not view the installer packages generated by WiX as falling within the definition of a derivative work, merely because they are produced using WiX. Thus, the installer packages generated by WiX will normally fall outside the scope of the MS-RL, and any of your source code, binaries, libraries, routines or other software components that are incorporated in installer packages generated by WiX can be governed by other licensing terms.

https://github.com/wix

Microsoft Reciprocal License (MS-RL)

This license governs use of the accompanying software. If you use the software, you accept this license. If you do not accept the license, do not use the software.

Definitions

The terms "reproduce," "reproduction," "derivative works," and "distribution" have the same meaning here as under U.S. copyright law.

A "contribution" is the original software, or any additions or changes to the software.

A "contributor" is any person that distributes its contribution under this license.

"Licensed patents" are a contributor's patent claims that read directly on its contribution.

Grant of Rights

(A) Copyright Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free copyright license to reproduce its contribution, prepare derivative works of its contribution, and distribute its contribution or any derivative works that you create.

(B) Patent Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free license under its licensed patents to make, have made, use, sell, offer for sale, import, and/or otherwise dispose of its contribution in the software or derivative works of the contribution in the software.

Conditions and Limitations

(A) Reciprocal Grants- For any file you distribute that contains code from the software (in source code or binary format), you must provide recipients the source code to that file along with a copy of this license, which license will govern that file. You may license other files that are entirely your own work and do not contain code from the software under any terms you choose.

(B) No Trademark License- This license does not grant you rights to use any contributors' name, logo, or trademarks.

(C) If you bring a patent claim against any contributor over patents that you claim are infringed by the software, your patent license from such contributor to the software ends automatically.

(D) If you distribute any portion of the software, you must retain all copyright, patent, trademark, and attribution notices that are present in the software.

(E) If you distribute any portion of the software in source code form, you may do so only under this license by including a complete copy of this license with your distribution. If you distribute any portion of the software in compiled or object code form, you may only do so under a license that complies with this license.

(F) The software is licensed "as-is." You bear the risk of using it. The contributors give no express warranties, guarantees or conditions. You may have additional consumer rights under your local laws which this license cannot change. To the extent permitted under your local laws, the contributors exclude the implied warranties of merchantability, fitness for a particular purpose and non-infringement
